After 6 months' experience, not less than $8 per week.

After 12 months' experience, not less than $9.50 per week.

After 18 months' experience, not less than $11 per week.

Zone 2.—The Province of Quebec—Excepting Zone 1:

Experienced Workers:—

After 24 months' experience at the trade, no worker shall be paid less than $10.00 per week.

Apprentices:—

Beginners, not less than $6 per week.

After 6 months' experience, not less than $7 per week.

After 12 months' experience, not less than $8 per week.

After 18 months' experience, not less than $9 per week.

(a) *Canadian Raw Leaf Tobacco Industry:* Employeees of manipulators of Canadian raw leaf tobacco outside of manufacturing plants, are covered by the following special schedule:—

Fifty per cent of the employees, at not less than 12½ cents per hour.

Fifty per cent of the employees, at not less than 16 cents per hour.

These minimum wages apply to both male and female workers. The 50 per cent rule shall be established separately for both men and women, but in the aggregate, not more than 50 per cent of the total working force can receive less than 16 cents per hour.

2. *Experience of Employees:* The time of experience of the employees shall be counted upon the working hours they have actually worked, based upon a working week of 48 hours, fifty (50) weeks constituting one year; therefore, 1,200 hours of work mean six months of experience, 2,400 hours, one year; 3,600 hours, eighteen months; and 4,800, two years' experience at the trade.

3. *Maximum of Apprentices:* The number of apprentices (of either sex) shall not exceed one-third of the total number of employees. Any person having less than 24 months' experience at the trade shall be considered as an apprentice.

4. *How Wages Must Be Paid:* The employees' wages shall be paid to them wholly in cash; no deduction being permitted for any cause or purpose whatsoever. Said wages shall be given to them in a sealed envelope on which shall be written: their name, their register number, the date of the week or of the fortnight they have worked, the number of hours they have performed, the rate per hour, the amount of money enclosed in the envelope; same must be initialled by the person who pays the employees. The wages are payable weekly, but in exceptional cases, where it is the custom, they may be paid fortnightly, but not later. Employees are advised to keep their pay envelopes so they could be used, as proof, whenever necessary.

(a) All employees—manual and non-manual—are covered by this Order, no matter what occupation they fill or the work they perform. The system of periodical changes from piece rates to hourly rates, or vice versa, for same operation, is prohibited, as such changes permit an illegal reduction of wages; the piece rates shall be uniform for all employees performing same operation.

5. *Duration of Labour:* The work period for which these minimum wages shall be paid, shall be 48 hours per week. Work in excess of the above period shall be counted as overtime and shall be paid for at not less than the regular rate of wages of the employees.

The total of working hours, insofar as female workers are concerned, and boys under eighteen years of age, cannot in any case, exceed 55 hours per week unless a special permit has been obtained from the Industrial and Commercial Establishments Inspection Department. (Chap. 182, R.S.P.Q. 1925). Work in excess of the above period of 55 hours, shall be paid at not less than time and a half; this to apply to both piece and time workers.

After having left the employer's premises, any employees who may be recalled to do regular or overtime work, shall receive an amount equivalent to at least two hours' work.

6. *Waiting Time:* Any employee required to wait on the premises shall be paid for the time thus spent.

7. *Deduction:* No deduction shall be made for work that has been spoilt. No deduction

below the minimum wage for absence shall exceed the value of the time lost, based on the wage of the employee.

8. *Exemption:* The Board may grant permits of variation or suspension of any of these regulations to meet exceptional conditions, it may also issue permits for lower wages on behalf of aged or handicapped workers.

9. *Discharge of Employees:* No employer shall discharge or threaten to discharge or in any way discriminate against any employee, because such employee has lodged a complaint with the Board or has testified or is about to testify in any investigation or proceedings permitted or prescribed by or taken under the provisions of this Act. All complaints are strictly confidential.

The Order contains the usual provisions regarding posting, penalties, etc.

British Columbia

ORDERS NO. 43 AND 44.—*establishing a minimum wage for janitors and janitresses.*

The British Columbia Board of Industrial Relations has recently issued Minimum Wage Orders No. 43 and No. 44, governing the employment of janitors and janitresses, respectively. Both Orders, which become effective on June 1, 1937, are in substitution for previous Orders which have been in operation since April 18, 1935, and October 3, 1935, respectively (Labour Gazette, May 1935, page 428, and November 1935, page 1009).

In each of the new Orders (which establish identical rates and working conditions for janitors and janitresses) there is an increase of 2½ cents per hour in the minimum wage of janitors (or janitresses) employed in apartments of four suites or less, the new rate being 37½ cents per hour.

In buildings with more than four suites the minimum wage is graded on a monthly basis according to the number of apartments, ranging from $22 per month for five residential suites to $125 per month for 48 or more suites.

Provision is made whereby if one or two janitors are designated by the employer as resident on the premises such janitor or janitors are to be paid the minimum monthly rate specified according to the number of suites. If more than two janitors are employed they are to be paid not less than the minimum rate of 37½ cents per hour for each hour of work. (This same stipulation applies also in the case of janitresses.)

Conditions of Labour and Employment.—Since the conditions of labour and employment are equally applicable to men and to women in this occupation, to avoid repetition, the following paragraphs, detailing such conditions, are extracted from Order No. 43, covering janitors:

4. When a janitor is employed in any apartment building and resides on the premises, there may be deducted from his wages a sum equivalent to a fair rental value for such provided accommodation in proportion to the rental value of the other suites in the said apartment building: Provided, however, that not more than twenty (20) dollars a month may be deducted from his wages for a suite of two (2) rooms and bathroom, and not more than five dollars ($5) a month may be deducted from his wages for each room in excess of two (2) in the said suite, but in no case shall the total rental value so deducted exceed the sum of twenty-five dollars ($25) per month.

In cases where the janitor is furnished with electricity and (or) gas, and the janitor uses the same, not more than the sum of four dollars ($4) per month may be deducted from his wages for the said electricity and (or) gas, or, in the alternative, meters shall be installed and the janitor shall thereupon pay for the consumption of the said electricity and (or) gas according to the said meters.

5. (a) Every janitor in any apartment building containing twenty (20) residential suites and over shall be given a rest period of twenty-four (24) consecutive hours free from duty in each calendar week, of which he shall be duly notified by his employer.

(b) Every janitor employed in any apartment building containing not more than nineteen (19) and not less than twelve (12) residential suites shall be given a rest period of eight (8) consecutive hours in each calendar week, of which he shall be duly notified by his employer.

6. When a substitute janitor (including any member of the janitor's family) is employed in an apartment building during the rest period, or any part thereof, such substitute janitor shall be employed and paid by the owner or agent of the apartment building according to the provisions of this Order.

In apartment buildings where there is no central heating plant or where there are no facilities for supplying central heat to the tenants the resident janitor may be paid on an hourly basis according to section 2 of this Order. [37½ cents per hour.]

ORDER NO. 18c.—*re minimum wages for stationary steam engineers in apartment buildings.*

This Order, effective May 14, 1937, places steam engineers employed in apartments in the same category as janitors for minimum wage purposes. It partially rescinds Order No. 18a (Labour Gazette, May 1935, page 427) and stipulates that the wage rate for such steam engineers be not less than the rate fixed for janitors by Order No. 43, viz., 37½ cents per hour. In effect it provides a wage increase of 2½ cents per hour for steam engineers employed in apartments.

Saskatchewan

By Orders which came into effect on June 2, 1937, the application of the Saskatchewan Minimum Wage Act has been extended to cover male and female employees in shops and factories within a five-mile radius of each city

in the Province. The Act, as revised in 1936, applied to female employees in shops and factories in cities but the Minimum Wage Board, with the approval of the Lieutenant-Governor in Council, was empowered to declare its provisions applicable to other portions of the Province and to male employees in shops and factories within the scope of the Act.

An order of the Minimum Wage Board declaring the Act to apply to male employees in shops and factories in cities was approved by the Lieutenant-Governor in Council on October 2, 1936, and gazetted. This order was noted in the LABOUR GAZETTE, November, 1936, p. 998, and has been in effect since November 1, 1936. Owing to some technical error in the procedure, it has been considered necessary to publish the order as it appears in the *Saskatchewan Gazette,* May 31, 1937. At the same time, the Minimum Wage Orders were made to apply to territory within a radius of five miles of a city.

Alberta

An Order in Council, effective May 31, 1937, approves Regulations made by the Alberta Board of Industrial Relations under authority of the Male Minimum Wage Act, 1936. These rules provide that where a minimum wage has been fixed for female workers in any class of employment, no male worker may be employed in such class at a less wage. Exception is made in the case of apprentices whose indentures have been approved by the Board and who are under proper instruction. For contravention of these provisions an employer is liable to a fine not exceeding $500 and must also pay to the worker the difference between the wages actually received and the minimum wage. Provisions similar to the above were contained in the Factories Act but were repealed during the 1937 session of the Legislature (see page 639). The new regulations also require all overtime permitted under the Hours of Work Act, 1936, to be paid for at the rate of time and one-half.

LABOUR AND INDUSTRY IN NOVA SCOTIA IN 1935-36

Third Annual Report of Provincial Department of Labour

EMPLOYMENT gains evident in the two preceding years were maintained and somewhat increased during the fiscal year ending November 30, 1936, according to information contained in the third annual report of the Nova Scotia Department of Labour. The Department was established under the Department of Labour Act (LABOUR GAZETTE, August 1934, page 748), and included in the annual review are the reports of the Deputy Minister, the Minimum Wage Board, the Employment Service Offices, the Inspector of Factories, and the Supervisor of Unemployed Relief.

Unemployment and Relief.—The relief situation in the province is reviewed in the reports of the deputy minister and the provincial relief supervisor. Summarizing the improved condition of the province during the period under review, the deputy minister states:

"The payment of Direct Relief, which is fair indication of employment especially in urban and industrial areas, has shown a further reduction of 28 per cent; being during the present year lower than in any year since 1931. This together with the reduction in the number of single men applying for assistance demonstrates a more healthy employment condition.

"A reduction of over $300,000 in direct relief payments compared with the previous year in view of the fact that according to Federal estimates the population of Nova Scotia increased by ten thousand persons during the past year indicates the extent to which recovery has already been achieved in Nova Scotia.

"The population increase in the years 1935 and 1936 was greater than the number of persons receiving relief in the year 1936.

"During the year considerable progress has been made toward a permanent solution of this problem. An agreement was arranged by the Department between the employees and employers in the coal industry providing for the employment of an extra crew to eliminate all overtime work in that industry.

"In New Waterford alone this placed in employment two hundred and forty men and its application throughout the Province should eventually place in employment about seven hundred young men, thus relieving one of the most pressing problems in mining areas besides providing a surplus force of trained workers to eliminate the need of importations as employment expansion develops.

"A careful study of the possibilities of apprenticeship training has been conducted by the Department of Labour during the year, and valuable data gathered relating to this subject."

The relief supervisor noted that in the industrial centres many of those who became unemployed when at the age of 50-55 are now finding it very difficult to secure work, and in

many cases it is doubtful if they will again be profitably employed.

Employment Service.—The annual report of the provincial employment offices, operated in conjunction with the Employment Service of Canada, indicated that placements were well up to the five-year average, and in this respect the superintendent reported that "the figures for 1936 approach more closely to a normal year than any other since 1931." A tabular summary gives a comparison of the cost for placement in the various provinces for the year ending March 31, 1936. This table showed that Manitoba had the lowest cost per placement at 87 cents with Nova Scotia second at $1.14. Commenting on the operation of the Nova Scotia offices, the deputy minister observed: "The cost of the service compares favourably with that of the other provinces of Canada, being second lowest and there can be no doubt that the workers were protected from exploitation at the hands of private agencies."

Factory Inspection.—The report of the factory inspector indicated that the number of accidents in the factories of the province for the year ended November 30, 1936, was 477 as compared with 551 in the previous year. In both years there were six fatal accidents. During the year 481 factories were inspected, some of the establishments being visted two or three times in connection with accident investigations or to ensure compliance with orders. Of the total number of accidents, 133 (including four fatalities), occurred in sawmills. The inspector pointed out that small mills are usually located in remote places, and "have been in the same family from one generation to another, doing a little custom sawing, and going on year after year with the same old equipment." He regarded his experience in trying to get owners to understand the danger of some conditions as "mostly a waste of time." The inspector considered that the general standard of factory sanitation in the province is being raised, and that each year there are some outstanding examples in improved lavatory, heating and ventilating equipment.

Dealing with accident prevention and the safety movement, the inspector observed: "The 'safety-first' movement is essentially a condition of mind, a habit-forming matter, and it is the duty of those in responsible positions in industry to keep the idea before the workers at all times. Organized safety has paid large dividends in this Province, and it is not unreasonable to expect, now that business has become at least normal in most industries, that it will resume its place in industry with even greater enthusiasm on the part of all concerned than ever before."

Report of Minimum Wage Board

The sixth annual report of the Minimum Wage Board, covering the administration of the Act during the fiscal year ended November 30, 1936, is included in the report of the Department of Labour.

Prefacing its presentation of tabular summaries, the Board outlined the activities of the year. With returning prosperity and increased industrial operations, the Board noted the advent of new business enterprises. It pointed out that frequently the persons engaged in new business were without experience and had only slender resources. At first it was usually the policy of such people to keep wages down with the result that the Board "had to be on the alert in order to protect the workers who under such circumstances might be exploited."

Special attention was given by the Board to inspections. Wage sheets were checked and adjustments were made where it was found that they deviated from the provisions of the Act. A total of 338 complaints were received and investigated, and $758.93 was recovered in wage claims.

During the year the Board issued one new Order governing office employees (Labour Gazette, December 1936, page 1135), and amended Orders Numbers Three and Seven governing employment in hotels and restaurants, and retail stores, respectively. By the amendment to Order No. 3, the time required for women employed in hotels and restaurants to become rated as experienced workers was reduced from one year to three months. Also uniforms are required to be supplied and laundered by the employers. Order No. 7, covering clerks in retail stores, was revised (Labour Gazette, November 1936, page 1002) by the addition of a clause whereby all part-time workers hired for special working hours will receive the full minimum rate per hour, eliminating rates formerly classed as "inexperienced" for this type of work.

The tabular statistics indicate an increase in the average weekly wage in all industries under the Act. In several cases this was attended by a decrease in the average weekly hours. The situation with respect to average weekly wages and hours in the various industries as compared with the previous year (1935) is as follows:—

Laundries and dye works—average weekly wage increased from $10.10 to $10.18; average hours reduced from 46 to 44.

Confectionery, baking and allied food trades—average weekly wages increased from $8.54 to $9.48; average hours reduced from 45 to 44.

Textile, needle and leather trades—average weekly wages increased from $10.23 to $10.43; average hours reduced from 51 to 49.

Hotels, restaurants and tea rooms—average weekly wages increased from $8.28 to $8.52; average hours remained the same at 53.

Telephone operators—average weekly wages increased from $11.34 to $11.82; average hours remained the same at 48.

Small factories, paper trades and printers—average weekly wage increased from $12.02 to $12.04; average hours remained the same at 47.

Retail stores, millinery, dressmaking, tailoring and fur sewing—average weekly wages increased from $10.56 to $10.60; average hours increased from 48 to 51.

Beauty parlours (Order operative in 1936; no comparison with 1935)—average weekly wage $10.70; average hours, 49.

WORKMEN'S COMPENSATION IN NOVA SCOTIA, 1936

The annual report of the Workmen's Compensation Board of Nova Scotia for the calendar year 1936 again records an increase in the total number of all kinds of accidents as compared with the previous year, the total number of accidents in 1936 being 10,538 as against 9,562 in 1935—a difference of 976. The total cost of all accidents for 1936 under Part 1 of the Act as far as could be estimated at the time of publication of the report was nearly $1,382,092, which amount is exclusive of administration expenses and cost of safety associations.

The provisional statement of income and expenditure for 1936 indicates that $104,813.06 was paid for medical aid in all classes. The sum of $9,039.79 was expended on safety associations. Administration costs during 1936 amounted to $104,141.69.

For industries under Part 1 of the Act the total income for the year 1936, actual and estimated, amounted to $1,368,212.09, and the estimated expenditure for the same period was $1,495,272.90, showing a deficit for the year's operations of $127,060.81. The surplus brought forward from prior years was $439,066.41, leaving a surplus at December 31, 1936, of $312,005.60. The amount reserved for bad and doubtful debts at December 31, 1935, was $20,000. The report states that the Board decided to carry to this reserve the sum of $91,000, making a total at December 31, 1936, of $111,000.

The 10,538 accidents reported to the Board for the year 1936 are classified as follows: fatal accidents, dependency established and compensation commenced, 37; fatal accidents, burial expenses paid, no dependents, 5; fatal accidents reported, pending adjustment, 7; fatal accidents, claim non-compensable or disallowed, 4; accidents causing permanent partial disability 247; accidents causing total disability for seven days or over, 6,757; accidents where medical aid only has been paid 2,131; accidents pending adjustment, no payments, 560; accidents non-compensable, other than fatal, 790.

At the end of the year, reviewed by the report, the persons receiving compensation for 1936 and prior years in the form of a monthly pension were as follows: widows 612; children under sixteen 755; dependent mothers 62; dependent fathers 19; other dependents 12; workmen disabled for life (partially or totally) 1,075.

The average rate of assessment levied on payrolls under Part 1 since the commencement of the Act has been $1.93 per hundred dollars of payroll, the rate varying from year to year. The average rate for 1935 was $2.43 and the average rate for 1936 was $2.46.

The provisional statement of income and expenditure by classes to December 31, 1936, shows that mining held first position in so far as revenue accrued from assessments and also disbursements was concerned. Revenue derived from assessments on the mining industry during 1936 was estimated at $591,127.92, while the total expenditure for the industry was placed at $695,637.78. Of this amount $113,115.60 was for compensation paid other than pensions, $83,398.21 was transferred to reserve for pensions, $414,165.48 was for compensation estimated outstanding, the balance being for this industry's proportion for medical aid, safety associations and administration.

Summary of Twenty Years' Administration.—During the twenty years from the beginning of 1917 to the end of 1936, accidents in the industries within the jurisdiction of the Board to the number of 148,525 were reported. During that time 1,645 workmen were fatally injured.

The amount actually paid to workmen or their dependents and for medical aid during the twenty years from the beginning of 1917 to the end of 1936 was $15,342,944.97, and the amount required at the end of 1936 for the purpose of paying life and other pensions and compensation to disabled workmen, and for medical aid, was $7,936,275.58.

The total compensation paid or payable to workmen and their dependents and for medical aid for the twenty years amounts to $23,279,220.55.

This amount does not, however, represent the entire cost of the accidents for the twenty-year period, as the administration expense and cost of safety associations are not included.

There were 902 widows to whom pensions for life or until remarriage were awarded; 2,071 children under sixteen years of age were awarded monthly pensions while under that age; dependent mothers and fathers to the number of 458 were awarded compensation; 35 members of the family other than widows, children and parents, but who were wholly or partly dependent upon the earnings of deceased workmen at the time of their respective deaths, received benefits, and life pensions or lump sums were awarded to 5,241 workmen who were disabled, either wholly or partially.

Prior to January 1, 1920, medical aid was not furnished to injured workmen except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability and during the seventeen years that have elapsed the cost of medical aid was $1,553,499.36. In the mining and iron and steel classes the greater portion of medical aid in connection with those classes is furnished under medical aid schemes and consequently is not furnished by the Board.

The report also gives complete statistics for 1935 dealing with accidents, by classes, months of occurrence of compensated accidents, time loss, average wage and age, nature of industries, causes of accidents, etc.

REGULATIONS IN MANITOBA FOR PROTECTION AGAINST SILICOSIS AND RESPECTING CONSTRUCTION CAMPS

By an amendment to the Workmen's Compensation Act of Manitoba, enacted in 1936, persons employed in mining or in iron, steel, or metal foundaries at an occupation where silicosis may be contracted must comply with the provisions of the Public Health Act and regulations made under it (LABOUR GAZETTE, May, 1936, page 403). Prior to that amendment, regulations under the Public Health Act, in so far as such were designed to safeguard workers against silicosis, were applicable only to workmen employed in underground mines (LABOUR GAZETTE, February, 1931, page 197).

Now, however, by new regulations and amendments to Consolidated Regulations under the Public Health Act, this protection is extended to "workmen employed in certain industries where silicosis may be contracted." These regulations, as published in the Manitoba Gazette of May 22, now become Part V, Division II, of the Consolidated Regulations. The former regulations (241-253) are repealed and are substituted by the following:—

241. In the regulations contained in this division, unless the context otherwise requires, the expression.

(*a*) "prescribed occupation" means any occupation in the industry of mining and in iron, steel and metal foundaries in which the workman is exposed to the inhalation of dust containing silica, but does not include an occupation wherein the workman is not exposed for a period of less than fifty hours in any one calendar month to the inhalation of such dust.

242. No workman shall engage or continue to engage in any prescribed occupation, nor shall any person employ or continue to employ any workman in any prescribed occupation, unless the workman is the holder of a subsisting licence or temporary permit issued under this division.

243. (1) The Minister may issue a licence in such form as he may prescribe to any workman to engage in any prescribed occupation upon being satisfied that the workman is physically fit therefor.

(2) A licence issued under this regulation shall remain in force until revoked or suspended by the Minister.

244. Any workman applying for a licence under the preceding regulation shall submit himself, for medical examination to a medical officer or officer appointed by the Minister. Every such examination shall include the taking of X-Ray plates of the chest.

245. Every workman holding a licence issued under regulation 243 shall submit to a re-examination by a medical officer or officers mentioned in regulation 244 once in each year.

246. The Minister may appoint medical officers for the purpose of performing the examinations referred to in the preceding regulation and in regulation 245 and may prescribe the character of the examination to be made and the reports to be submitted to him for the purposes of this division.

247. The medical officer or officers shall report to the Minister upon every such examination made under regulation 245.

248. (1) If any workman holding a licence neglects or refuses to submit to the annual examination, or if the report or reports of the examination indicate that the workman is physically unfit to engage in any occupation the Minister may revoke or suspend the licence.

(2) Notice of revocation or suspension may be given by the Minister by letter sent by registered mail addressed to the licensee at the address given in the licence and shall be effective from the date named in the letter.

249. (1) In any case where it appears to the Minister advisable before granting a licence or cancelling a licence to obtain a further report as to the physical fitness of an applicant or licensee or where an applicant or licensee or a proposed employer or employer requests that the Minister obtain a further report, he may request the permanent independent Board of Physicians appointed under sub-section (10) of section 80 of "The Workmen's Compensation Act" to make an examination of the applicant or licensee and report thereon to him.

(2) If the request is made by the applicant, licensee, or employer, that person shall pay the cost of the examination by the Board.

250. If any case where it is impracticable for a person desiring to engage in an occupation to submit himself for examination to a medical

officer or officers referred to in regulation 245, he may submit to an examination of such character as the Minister may prescribe to some medical officer designated by the Minister.

251. (1) If the medical officer is satisfied that the person is physically fit to engage in an occupation he may issue a temporary permit to the person in such form as the Minister may prescribe.

(2) Subject to the provision of subsection (3) a temporary permit shall expire six months after the date of issue.

(3) If it appears to a medical officer designated by the Minister that it has been impracticable during the period of the temporary permit for the permittee to submit himself to the required examination for the licence referred to in regulation 243, the medical officer may renew the temporary permit for a further period of six months.

252. (1) Unless the workman delivers to him a subsisting licence or temporary permit issued under this division, no owner, manager, superintendent, foreman or person shall employ a workman or permit a workman to be employed in any prescribed occupation.

(2) Any licence or temporary permit delivered as required in subsection (1) shall be retained by the person to whom the same was delivered during the period of the workman's employment in the prescribed occupation and shall be redelivered to the workman upon the termination of his employment if still subsisting.

253. If during the period of the workman's employment in a prescribed occupation his licence or temporary permit is revoked, cancelled or expires, no owner, manager, superintendent, foreman, or person in charge shall permit any workman to continue in any occupation during the time the workman is not the holder of a subsisting licence or temporary permit.

253A. No workman shall be in possession of, or deliver to any person mentioned in regulation 251 a licence or temporary permit not duly issued to him or one which has been revoked or suspended or which has expired.

253B. Any person who contravenes any of the provisions of the regulations contained in this division shall be liable to the penalty provided in section 34 of the Act.

Construction Camps

The same issue of the Manitoba Gazette contained the amended regulations respecting industrial and construction camps, now under Part V, Division 5, of the Consolidated Regulations, Public Health Act.

These regulations apply "to any construction, lumbering, wood-cutting, timbering, fishing, mining camp or industry of a temporary or permanent nature." The medical arrangements prescribed for such camps are set forth as follows:—

150. (1) Where 50 or more men are employed, the employer shall contract with one or more legally qualified medical practitioners for the medical and surgical care of his employees and for the regular inspection and sanitary supervision of the camp, and such official shall be known as the medical officer.

(2) Where less than 50 men are employed, the employer shall either contract with one or more legally qualified medical practitioners for the medical or surgical care of his employees or make such other arrangements for legally qualified medical and surgical services as may be necessary and satisfactory to the Minister.

(3) The medical practitioner shall provide medical and surgical attention to the employees. Every employer shall provide and maintain a sufficient supply of bandages, dressings, and other requisites in case of accident and also a supply of such medicines as the medical practitioner in charge prescribes for use in case of sickness.

(4) For the purpose of providing such medical and surgical services the employer may deduct from the pay of each employee a sum not exceeding one dollar ($1.00) per month. Such sum, together with any other sum necessary, to provide these services shall be paid to the medical practitioner or practitioners without rebate or deduction.

(d) That subsection (1) of Regulation 154 be repealed and the following be substituted therefor:—

"154. (1) In order to safeguard the health of all persons employed or to be employed in the lumbering, woodcutting, timbering, or mining industry, or in any construction camp, the Minister, from time to time, by order, may require that every person employed or to be employed in any such industry or camp, established or to be established, shall be vaccinated against smallpox and inoculated against typhoid, and every foreman or person in charge of employees in any existing camp in respect of which such an order has been made shall forthwith discharge from employment any person who refuses to comply with any such order, and after an order has been made in respect to any existing camp or to any camp to be established no person shall engage any employees for such camp unless such applicant for employment shall have first been vaccinated against smallpox and inoculated against typhoid. This section shall not apply to any members of the running trade or telegraphers or to persons who can produce evidence that they have suffered from smallpox or typhoid fever."

ANNUAL CONVENTION OF THE LABOUR EDUCATIONAL ASSOCIATION OF ONTARIO

THE thirty-fifth annual convention of the Labour Educational Association of Ontario was held in Kitchener, Ontario, on May 24, there being 108 delegates in attendance representing organizations in various sections of the province.

Regret was expresed at the opening session of the convention when the Secretary-treasurer, Mr. Rod Plant, read a telegram from Mr. Humphrey Mitchell, presently Director of Labour Transference in the Department of Labour, Ottawa, stating that due to unforeseen circumstances he was unable to attend the convention. Later, during the election of officers a special resolution was unanimously adopted expressing "deep appre-

ciation of the services rendered the Association by Mr. Mitchell, both as president and vice-president, offices which he occupied for a number of terms as a delegate to the annual conventions for many years." Sessions of the convention were, therefore, presided over by Vice-President O. H. Hughes, assisted by Mr. Tom Moore who was chosen as vice-chairman.

In welcoming the delegates on behalf of the organized workers of Kitchener, Vice-President Hughes, who is also president of the Twin City (Kitchener-Waterloo) Trades and Labour Council, referred to the growth of the international trade union movement in Kitchener since the Association last met in the city in 1934 and mentioned as recent acquisitions to the rolls local unions of fire fighters, furniture workers, milk drivers and general labourers. He said that members of the movement in Kitchener were always pleased to welcome their fellow trade unionists from other sections of Canada and hoped their visit on this occasion would be a happy one.

The visiting delegates were welcomed by Mayor J. A. Smith of Kitchener who paid tribute to members of the labour movement in Kitchener, whom he stated had, through the local Trades and Labour Council always co-operated in matters aimed to social betterment and development of the city.

Greetings from the Federal Government were conveyed by the Hon. W. D. Euler, Minister of Trade and Commerce. Referring to present economic conditions the Minister stated that the stage had been reached when labour must not be considered as a commodity to be bought at the lowest price. "It is the just and wise thing for employers to ensure to their workers not only a living wage, but something more," he declared.

Officers' Reports

The report presented by the Executive Board reviewed in detail the various activities carried on throughout the past year and also dealt with a number of matters of current interest to labour in which the fullest co-operation of the affiliated membership was urged with a view to implementing labour's policies in respect thereto. The presentation made to the Ontario Government following the last convention was outlined and other efforts made to secure social and economic improvements were referred to. A section dealing with the right of workers to organize cited activities of the Association in supplementing those of the Trades and Labour Congress to secure enactment of the draft bill relating to the question which had been presented to the Government early in January this year.

Another section referred to Employment and Relief for the Unemployed and labour's policy that this should be the responsibility of the Federal Government was strongly emphasized. Reference was also made to the decisions of the Judicial Committee of the Privy Council respecting the various pieces of social legislation including Unemployment Insurance enacted by the Federal Parliament in 1935. Expressing the opinion that statements made by both the Prime Minister and Minister of Justice during the recent session indicated that the Federal Government was contemplating discussion with the provinces with a view to enactment of such legislation, the report stated:

"Labour has consistently maintained that such legislation to be effective must be national in its scope, knowing only too well from experience with such measures as the Old Age Pensions Act, the delays and confusion when provincial legislation must be awaited. It is hoped, therefore, that in any further action to be taken in respect to social reforms, quibbling on the question of jurisdiction may not supersede the all too apparent need for legislating in the interests of the people of Canada as a whole."

The Home Improvement Plan evolved by the National Employment Commission was welcomed by the executive as a means through which much needed employment could be provided for building trades workers and those engaged in allied industries. The hope was expressed for full utilization of the facilities of the same in order to ensure success of the plan.

Another section of the report dealt with Union Labels, Shop Cards and Buttons and the membership was urged to put forth every effort to extend the demand for union labelled products and union services.

Commenting on the necessity for public manifestation against war and in favour of international peace, the executive directed attention to the peace action campaign about to be undertaken in Canada, suggesting that the League of Nations Society of Canada be the body through which the campaign be conducted. It was also recommended that the Association subscribe for a Corporate Membership in the Society as a tangible evidence of the desire to further the work being carried on in the interests of human security and further that every assistance be extended the Society by the affiliated membership.

Other sections of the report dealt with the necessity for reducing hours of labour; reduction in the qualifying age for Old Age Pensions; amendments to the Workmen's Compensation Act; minimum wages and the

development of natural resources under public ownership and control.

The report which was unanimously adopted without amendment was discussed by section by section and a number of items at some length, particularly that dealing with the right of workers to organize.

Resolutions

In all, twenty resolutions were considered by the convention. These dealt with the following matters:

Workmen's Compensation. — Two resolutions concurred in, called for amendments to the Workmen's Compensation Act in order to bring all workers within its provisions and that payment of full compensation be made to injured workers until they are able to resume their usual occupation. The opinion was expressed that the latter change would prevent reduction in benefits on the ground of the worker being fit for legal work which in many cases could be obtained.

Health and Safety.—Grouped under this heading were five resolutions all of which were adopted. Stricter enforcement of existing laws governing the use of dangerous materials used by hand or spray methods and regulations covering description of ingredients used in the manufacture of paints, lacquers, etc., was the subject matter of one resolution. Another called for prompt action on the part of the Department of Highways towards protecting pedestrians by construction of walks or paths paralleling the highways.

A check up on operating schedules of street railways operating one-man cars was urged in another resolution with a view to enactment of adequate safeguards against traffic hazards due to this type of transportation.

Right to Organize.—In addition to the section in the executive report dealing with workers' right to organize a resolution was unanimously adopted referring to this subject.

Superannuation.—The convention went on record as favouring superannuation for employees of the Federal Government who are employed at "prevailing rates" such employees including tradesmen of various types and who are not at present covered by the Superannuation Act. A further resolution called upon the affiliated membership throughout the province to co-operate with organized civic employees in any efforts made to secure superannuation protection for all classes of workers employed by the corporations of their respective municipalities.

Industrial Standards Act.—The Convention decided to immediately request the Ontario Government to take action making existing schedules under the Industrial Standards Act conform with amendments enacted at the last session of the Legislature. The resolution adopted was the result of recent court decisions declaring schedules as being beyond the scope of the Act.

Other Resolutions.—Other resolutions dealt with the redemption of soiled bank notes; condemnation of the control of the age limit for employment in industries carrying group insurance on their employees by insurance companies instead of by industry itself; opposing the system inaugurated recently whereby postal service employees are required to work on Saturday afternoons and public holidays, etc.

The election of officers resulted in the following persons being elected: President, O. H. Hughes, Kitchener; Vice-President, Peter Grant, St. Catharines; Secretary-Treasurer, Rod. Plant, Ottawa; Executive Board: F. Ackerknecht, Kitchener; Mrs. E. Finkle, Toronto; J. Cauley, Hamilton; Ed. S. Walker, London; Robt. J. Barnett, Ottawa; Wm. Stokes, St. Thomas; F. J. Fishleigh, St. Catharines; Frank Healey, Niagara Falls; J. P. Nicol, Thorold and Geo. Lauder, Windsor. Brantford was elected as the Convention City for 1938.

EMPLOYEES' WELFARE PLANS OF SWIFT CANADIAN COMPANY

In a brief introduction to a summary of its industrial relations program, the Swift Canadian Company draws attention to the emphasis placed on social security in the Dominion during recent months. In this respect the Company declares that its policy has always been to consider its employees "as men and women—not just workers" and that it has endeavoured for many years to merit the confidence and trust of all the members of its organization, many of whom are shareholders.

Indicative of the development of its industrial relations program over a considerable period of years, an outline of the Company's plans for employees' welfare is as follows:—

Pensions.—Since August, 1916, non-contributory pensions (LABOUR GAZETTE, September, 1916, page 1535) have been granted to retired and disabled employees of the Company. The pension fund, which is separate from the Company's business, is invested in high grade and well diversified securities.

Vacations with Pay.—Vacations with pay for manual workers were started in the meat packing plants of the Company in 1923, and gradually extended to other parts of the business.

In February, 1937, the vacation plan was expanded so that hourly-paid workers receive vacations with pay for one, two or three weeks. The new plan provides one week's vacation for all hourly-paid workers with two years or more continuous service; two weeks' vacation for those with five years' service; and the three-week vacation period to women with fifteen years' and to men with twenty years' continuous service.

Guaranteed Hours.—The pamphlet points to the great variation in production in the meat packing industry due to the fact that operations are dependent upon the uncontrollable factor of the varying numbers of live animals which come to the market.

In view of fluctuating receipts of live stock, which would result in variable wage income, the Company, in 1912, began to guarantee pay for meat packing plant workers for a minimum number of hours per week. The guarantee is now 40 hours per week, assuring this minimum to the Company's permanent employees. The Company has always maintained a policy of retaining older workers, and, as a result, employees with long service records have a high degree of security of income.

Accidents and Sickness.—Recognizing that first aid should be preventive, Swift Canadian Company has carried on an active anti-accident campaign for more than 25 years. This policy, it is stated, has resulted in a substantial reduction in the number of accidents in its plants. The interest of the Company does not cease when the employee leaves the plant, the Company maintaining that the loss is just as great to the employee, and nearly as great to the employer, if an accident occurs away from the place of business. Accordingly, a campaign for the prevention of automobile accidents was started by the Company more than a year ago.

In the event of an employee becoming injured or incapacitated because of illness, the Swift Canadian Company maintains a definite program which provides special assistance, varying with the type of affliction, length of service, and other similar factors.

Employees' Benefit Association.—In addition to the Company program, more than 90 per cent of the employees of Swift Canadian Company, have protected themselves from loss through accident, sickness and death by joining the Employees' Benefit Association, which was founded in 1907 under the sponsorship of the Company.

Group Life Insurance.—Through an arrangement by which the company participates in the cost, group insurance is available to employees at low rates. Approximately $300,000 has been paid in death benefits during the last eleven years.

Employee Representation.—In 1919, an idea founded on co-operation between employer and employee was given a trial at two plants of the Company. The experiment proved to be so successful that this idea, now recognized as the Employee Representation Plan, is in force at all of the Company's plants.

The plan is one of joint representation of elected employee representatives (in whose selection the management has no voice or influence), and appointed management representatives. It functions in all matters pertaining to wages, hours, and working conditions, and to the settlement of complaints. The assemblies have at various times discussed, investigated, and agreed on rates of pay. Under this plan of employee representation, workers are secured against unjust discharge or unfair treatment.

Promotions.—In the matter of promotions the Swift Canadian Company has adhered to the policy of its founder, G. F. Swift, who fifty years ago declared: "I can raise better men than I can hire."

A short time ago a survey was made of the executive force of the Company's organization, and it was found that 80 per cent of the executives began in the lower positions of messenger boys, labourers, or clerks; 15 per cent began in slightly higher positions, such as assistant foreman; and 5 per cent entered the organization in various managerial positions. This 5 per cent consisted largely of those with special knowledge and training, such as professional and technical men.

INDUSTRIAL RELATIONS PLAN OF T. S. SIMMS AND COMPANY

The industrial relations program of T. S. Simms and Company is outlined in three booklets issued by the company.

A pamphlet entitled "Book of Information for Employees" sets forth in detail the working conditions to be observed by workers, such as hours of work, starting and closing time, lateness, absence from work, pay, etc.

Advancement.—Dealing with the subject of advancement it is stated that "it is the policy of this company to give wage increases whenever they are earned, without waiting for employees to ask for more pay, and to promote employees to better positions whenever there is an opportunity. The payroll is gone over regularly once a year, namely, July 1st, when the whole wage situation is discussed, in order to ascertain whether or not all are equitably paid. The wages of new employees will be considered as their advancement may warrant throughout the year. New employees are taken on trial for six weeks, at the end of which time, if they prove satisfactory, they will be advanced; otherwise the firm may

dismiss them." Employees are invited to approach the management in reference to his or her wages if at any time it is felt that their pay is not satisfactory or that there is some job they are better qualified to do.

Certain rules and regulations are prescribed regarding waste, care of machines and tools, cleanliness, smoking, etc. Health and Safety is also dealt with, under which heading it is pointed out that the company maintains a hospital or accident room which is in charge of someone appointed from the office and always available on a moment's notice.

Factory Services.—The company maintains a cafeteria for employees, where meals are served at below cost, or employees may bring their own lunches and use the cafeteria during lunch time.

A reading room, with an assortment of the best current magazines and papers is maintained by the company, and may be used by the employees during the noon hour period. Employees are also entitled to the privileges of a library.

Employees' Co-operative Plan—Works Committee.—In 1921 the T. S. Simms Company Employees' Co-operative Plan was formed, the objects of the scheme being:—

(*a*) To promote and maintain just and harmonious relationships between the company and its employees.

(*b*) To expedite the settlement of any matters requiring adjustment between the company and its employees.

(*c*) To further the efficiency and to improve the working conditions of the plant through the co-operative development of constructive policies by the employees and the management.

Each department of the factory elects one or more representatives each year to a factory committee called the "General Works Committee." The committee meets regularly to discuss factory problems and to take up with the management matters which are of interest to employees and the company. The Works Committee participates in the active management which directly affects workers. Employees are invited to refer to their representative any matters which they consider should have his attention or that of the Works Committee.

Mutual Benefit Association.—The company maintains a Mutual Benefit Association which entitles contributing members to benefits for time loss through sickness and such accidents not incidental to the employment of the member. Benefits payable to members are computed on the basis of $1 per week for each cent contributed per week to the funds of the association and it is provided that such benefits shall not be less than $3 nor more than $10 per week, and that in no case shall such benefits exceed two-thirds of the employee's weekly pay. Sickness is counted as beginning with the first full day's absence from work through illness.

Benefits are not payable for any sickness exceeding twenty-six weeks' duration, and not more than twenty-six weeks' benefits are to be paid during any period of twelve months.

In the case of the death of a member, his or her heirs are entitled to a death benefit equal to fifteen weeks' sick benefit, but in no case is such a payment to be less than seventy-five dollars.

T. S. Simms and Company contributes weekly to the funds of the association an amount equal to the dues paid by the employee-members.

In the event of an employee becoming temporarily unemployed for a period not exceeding four weeks, such an employee is entitled to benefits as if dues had been paid weekly, all arrears of contributions to be paid as soon as possible after resuming work. Arrears may be deducted from accrued benefits.

Systematic Saving.—In order to encourage and assist employees to save a specific amount each week, the company will, upon being requested, deduct each week from the employee's pay any amount designated, and place the same to his or her credit in a savings bank. Accounts so established, may be drawn upon at any time. The employee notifies the management the amount he or she desires to have taken out each week. Amounts lower than twenty-five cents per week are not accepted but any amounts from twenty-five cents a week and upwards are acceptable.

Employees' Insurance Plan.—Group life insurance is provided for employees, a large part of the cost being paid by the company. On beginning employment with the company the employee is required to apply for this life insurance, which, however, is not effective until the employee has the required income and period of service. To be eligible for insurance a male employee must be under sixty years of age, have earnings of $520 or more per year and have completed one year's service. For female employees the requirements are that she be under sixty years of age, have earnings of $520 or more a year and have completed two years' service with the company.

All eligible employees, regardless of salary class, are insured for a minimum of $1,000. Benefits under this policy are payable to the beneficiary named by the employee in the event of the latter's death from any cause and at any time, either before or after retirement. Should an employee become totally or permanently disabled before reaching the age of 60, the full amount of the death benefit is paid to the assured person. If an employee leaves the service of the company and desires to maintain his life insurance he may convert his policy into any of the standard plans of life or endowment assurance provided by the company administering the company's group plan.

REPORT OF BRITISH MINISTRY OF LABOUR FOR 1936

The annual report of the British Ministry of Labour, outlining the work carried on during 1936, was published recently. As reviewed in the May issue of the British Ministry of Labour Gazette, its main sections deal respectively with employment, and unemployment insurance; training and instructional centres; and welfare schemes for the unemployed; industrial relations; work of the employment agencies; etc.

Employment.—It is stated in a general review of the state of employment during the year that three facts stand out from a study of the employment position during 1936. There was an exceptionally sharp rise in the numbers available for employment; large increases took place in the numbers in employment; and a marked decrease occurred in the numbers unemployed. From March, 1936, onwards the numbers of insured persons, aged 16-64, in employment in Great Britain, exclusive of agricultural workers, exceeded all previous records, reaching a total of 11,132,000 in December, 1936, or just over half a million more than in the preceding December. At the close of the year, the number of persons registering as unemployed was 1,629,000, or nearly 250,000 below the total for the previous December.

As in the three previous years the improvement was general, but the heavy incidence of unemployment in the North and in Wales, as compared with the remainder of the country, persists, and, on the average, unemployment in Wales during 1936 was more than twice as severe as in the country as a whole. Briefly, while one-half of the total insured population is in the north and Wales, those areas account for two-thirds of the total unemployment.

The Work of the Exchanges as Employment Agencies.—The number of vacancies notified in 1936 was 3,102,758, nearly 200,000 more than in 1935, and the number of vacancies filled was 2,624,213, over 110,000 more than in 1935. This represents a percentage of 84·6 of vacancies filled in 1936, as compared with a percentage of 86·3 in 1935; the increased difficulties of meeting the demands of employers owing to the lack of applicants on the registers possessing the qualifications and experience required are reflected in the smaller percentage for 1936.

A table is published in the report which groups the principal industries under 32 heads, and gives, for each group, the number of engagements of wholly unemployed workpeople made through the exchanges, expressed as a percentage of the total number of such engagements. The overall percentage was 28·9, and it is stated in the report that, while there is a continued increase in the use of the exchanges for labour engagement, there is no doubt that the range of their effective service could, with advantage to industry, be extended over a wider field.

Training and Instructional Centres; and Welfare Schemes for the Unemployed.—The number of training places provided at the training centres increased during the year from 4,245 to 6,255. The additional places were mainly in the engineering and building trades. A total of 10,693 men completed a course of training in 1936, and of these 10,398, or over 97 per cent, entered employment.

The number of men admitted to instructional centres and summer camps during the year was 20,872, of whom 3,830 entered employment.

The Ministry's physical training activities were expanded during the year. The Ministry continued to co-operate with the Central Committee on Women's Training and Employment in the provision of training for unemployed women and girls; it also continued the grant to the National Council of Social Service towards the cost of assisting and encouraging local voluntary efforts on behalf of unemployed persons in occupational centres, welfare centres, etc.

Boys and Girls.—In spite of the fact that the total juvenile population was higher than in 1935 by approximately 150,000 there was a marked improvement during 1936 in juvenile employment conditions, the average monthly live register of unemployed juveniles being 105,915 (of whom 54,567 were boys and 51,348 girls), or 12,563 less than in 1935. Tables of the distribution of juvenile unemployment for each of the divisions show that three-quarters of the total was in the north of England, Scotland, and Wales, a position which corresponds almost exactly with that of 1935.

The report refers to the arrangements for giving advice to boys and girls with regard to choice of employment, and gives particulars of the placing of boys and girls in employment.

The number of juveniles transferred during 1936 under the juvenile transference scheme reached the record total of 15,407, as compared with 10,024 in 1935. The report gives particulars of the arrangements made for the accommodation and welfare of transferred juveniles, also of the opening of further transfer centres and camps, the object of which is to improve the physical condition of juveniles before taking up employment in an area away from home. Reference is also made to the

short courses of vocational training for boys and girls, and to the extension of the co-operation on the part of local education authorities in the transfer of juveniles.

The aggregate number of boys and girls who attended junior instruction centres and classes during the year was about 191,000. Reductions in most areas in the numbers of unemployed juveniles caused the attendances for the last quarter of the year to be substantially below those for the corresponding period in 1935.

Unemployment Insurance and Unemployment Assistance.—The Unemployment Insurance (Agriculture) Act, 1936, which extended the unemployment insurance scheme to agriculture (including horticulture and forestry), and the Unemployment Assistance (Temporary Provisions) (Extension) Act, which extended to March 31, 1936, the period of operation of the Act requiring the payment of grants to local authorities in consequence of the postponement of the "second appointed day" for the purposes of the Unemployment Insurance Act, 1934, received the Royal Assent during the year. At the close of the year it was estimated that about 600,000 persons were insured under the agricultural insurance scheme.

The report describes the administration of the unemployment insurance scheme under various headings; also the administration of Unemployment Assistance and the proceedings of the Unemployment Insurance Statutory Committee.

Industrial Relations.—The improvement in the industrial position gave rise to widespread movements for increases in wages, and to greater trade union activity resulting from strengthened organization. Although, however, there were more disputes than in any year since 1920, they mostly affected individual undertakings, and in most cases were of short duration.

The smoothness with which adjustments in working conditions were generally made affords further evidence of the effectiveness of the various forms of joint machinery, and of the resolve of employers' and workpeople's organizations to use constitutional methods of settlement. On the other hand, many of the stoppages of work which took place were of an unofficial character, and the report comments at some length on this class of stoppages.

The ministry was concerned with differences and disputes between employers and workpeople in a wide range of industries. Wherever possible an endeavour was made to incorporate in any settlement reached better provision for the avoidance and proper negotiation of future difficulties. Considerable attention was also given to strengthening and establishing proper joint machinery for the negotiation of wages and working conditions and the settlement of differences, where there was evidence that the existing methods were inadequate.

The report refers to negotiations and settlements as regards wages both in the spinning and in the weaving sections of the cotton industry; to the recommendations of a Board of Enquiry into wages and hours of work in the wool textile industry; to the appointment of a committee to examine the working conditions of road transport workers; to the results of a meeting of the minister and representatives of employers' organizations in the distributive trades; to the results of discussions initiated by the minister with representatives of certain industries involving the possibility of reducing working hours; to the proceedings of the Railway Staff National Tribunal; to the setting up of a Civil Service Arbitration Tribunal for dealing with questions affecting conditions of service of civil servants, which had hitherto been referred to the Industrial Court; and to the proceedings of the Joint Industrial Councils.

The Industrial Court issued 35 awards during the year; awards were given by single arbitrators in nine cases; and there were 80 conciliation settlements, of which 45 were industrial, and 35 were cases under the Road Traffic Act.

Industrial Accidents in Ontario

Details supplied by the Workmen's Compensation Board concerning industrial accidents in Ontario are given in a circular issued by the Industrial Accident Prevention Associations as follows: There were 5,069 accidents reported to the Workmen's Compensation Board during May, 1937, compared with 4,574 in the same month a year ago. Of these accidents, 24 were fatal compared with 18 in May, 1936. Total awards for compensation and medical aid during the month amounted to $501,288.17, the cost of medical aid only being $109,229.93.

By a resolution adopted at the Montreal and Ottawa Conference of the United Church of Canada, labour's right to organize and bargain collectively was recognized. The resolution in addition to urging recognition of this principle in the operation of the United Church Publishing House also called upon the provincial governments of Ontario and Quebec "to enact legislation protecting workers in the exercise of their rights to organize, similar to the Trade Union Act of Nova Scotia and the Freedom of Trade Union Association Act of Alberta."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN APRIL, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on May 1 was 10,089, the employeees on their payrolls numbering 1,011,474 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April was 1,810, having an aggregate membership of 188,887 persons, 11·1 per cent of whom were without employment on May 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 officers of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of May, 1937, as Reported by the Employers

Data tabulated by the Dominion Bureau of Statistics from 10,089 firms showed a pronounced increase in the employment they afforded at the beginning of May, their staffs aggregating 1,011,474 persons, or 32,155 more than in the preceding month. Reflecting this advance, the crude index, based on the 1926 average as 100, rose from 103·0 at April 1 to 106·3 at the date under review, when it was higher than at May 1 in any other year since 1930. The industrial expansion indicated at the latest date was on a scale rather greater than the average between April 1 and May 1 in the years, 1921-1936, so that the index, when corrected for seasonal influences, rose slightly from 109·2 in the preceding month to 109·4 at the beginning of May.

The unadjusted indexes at May 1 in the years for which statistics are available are as follows: 1937, 106·3; 1936, 99·5; 1935, 95·2; 1934, 92·0; 1933, 77·6; 1932, 87·5; 1931, 102·2; 1930, 111·4; 1929, 116·2; 1928, 106·8; 1927, 101·8; 1926, 95·4; 1925, 91·9; 1924, 92·9; 1923, 92·5; 1922, 84·3 and 1921, 85·1.

Manufacturing reported improvement at the date under review, mainly in the food, lumber, pulp and paper, textile and iron and steel divisions. With the exception of logging and coal-mining (which showed seasonal curtailment) the non-manufacturing industries also afforded considerably more employment; the gains in construction were especially pronounced, being the largest recorded at May 1 in any year since 1930, and greatly exceeding the average for the same date in the period, 1921-1936. There were also marked increases in transportation, with smaller gains in communications, services and trade and in the extraction of metallic ores and of non-metallic minerals except coal.

A brief review of the situation at May 1, 1936, shows that the 9,544 firms then co-operating and employed 939,409 persons, as compared with 918,983 in the preceding month. Manufacturing, transportation, construction, services and trade had shown improvement, but the increases were not so large as those indicated at the beginning of May in the present year.

Employment by Economic Areas

Heightened activity was reported in each of the five economic areas, where the gains since the preceding month ranged from over two per cent in Ontario to six per cent in British Columbia. The situation generally was better than at May 1 in any of the preceding five years.

Maritime Provinces.—Employment in the Maritime Provinces showed a considerable advance, which was larger than that recorded at May 1 in any other year since 1920, except 1930. The index for the latest date was over seven points above that for May 1, 1936. Six hundred and ninety-seven firms reported 79,815 employees, or 3,895 more than in their last return. Manufacturing (especially in fish-preserving and lumber factories), mining and construction showed gains; those in the last-named, which were pronounced, occurred

largely in highway work. On the other hand, logging and transportation released many workers, the declines being mainly seasonal in character. The 670 employers furnishing statistics for the beginning of May last year had an aggregate staff of 73,950 persons, being greater by 1,232 than at April 1, 1936.

Quebec.—Conditions improved in Quebec, according to 2,409 employers of 292,764 persons, as against 284,249 in the preceding month; this increase of 8,515 was smaller than that noted at May 1, 1936. Notable gains were made in manufacturing, particularly of food, pulp and paper, textile, lumber and iron and steel products. Transportation, building and highway construction, mining and services also afforded more employment, the additions to staffs in shipping and construction being especially large. However, there were important declines in logging as the active season drew to a close. Employment was brisker than at the beginning of May of last year, when 2,253 firms had reported 266,340 employees, or 13,731 more than in the preceding month.

Ontario.—The trend was upward in Ontario, the indicated increase rather exceeding that recorded, on the average in the years since 1920. Marked improvement was noted in manufacturing, transportation and construction, while there were smaller gains in mining, communications, services and trade; the exception to the generally upward movement was logging, in which seasonal curtailment of operations considerably reduced employment. In the manufacturing group, there were increases on the whole in all divisions but tabocco and beverages, those in iron and steel and lumber mills being most noteworthy. The working forces of the 4,466 co-operating firms aggregated 432,624 employees, compared with 422,856 at April 1. This was an advance of over two per cent. Employment at May 1, 1936, had shown no general change, and the index then was nearly eight points lower than at the latest date, when it was 111·2. The 4,219 establishments from which information was tabulated for the same date of last year had reported staffs aggregating 397,535.

Prairie Provinces.—Manufacturing, transportation, construction and trade reported heightened activity, the gains in railway construction being most pronounced; in the group of factory employment, a considerable part of the improvement took place in the lumber, food, clay, glass and stone and iron and steel divisions. On the other hand, coal-mining and logging were seasonally slacker. Statements

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

were compiled from 1,453 employers in the Prairie Provinces whose staffs rose from 113,752 persons at the beginning of April to 118,731 at May 1. The advance was much greater than that recorded at the same date in 1936, also exceeding the average increase noted at the beginning of May in the years since 1920. The index, standing at 93·2, was fractionally higher than at the corresponding date of last year; statistics had then been received from 1,400 firms with 117,444 employees, or 2,691 more than at April 1, 1936.

British Columbia.—The increase in British Columbia was larger than normal according to the experience of the last sixteen years. The May 1 index, at 103·4, was higher than at that date in any other year since 1930. An aggregate payroll of 87,540 persons was employed by the 1,064 firms furnishing data, who had 82,542 employees at April 1, 1937. Logging, mining, building, highway and railway construction, trade and manufacturing showed improvement; within the last-named, the greatest gains took place in lumber, food and iron and steel factories. For May 1, 1936, 1,002 employers had reported 84,140 workers, as compared with 81,563 in the preceding month.

Table 1 gives index numbers by economic areas.

Employment by Cities

Improvement was shown in each of the eight cities for which separate tabulations are made; firms in Quebec City, Montreal, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver reported heightened activity. The largest gains were in Montreal. Except in Ottawa (where there was little general change), the situation in these centres was better than at May 1, 1936.

Montreal.—Manufacturing, transportation, building construction, services and trade recorded advances in Montreal, those in the two groups first-named being extensive. Within the manufacturing division, considerable additions to staffs were made in lumber, food, textile, electrical apparatus, iron and steel and other factories. The 1,395 co-operating employers reported 151,781 persons on their payrolls, compared with 145,340 at April 1. This increase greatly exceeded the average gain at

Relative Weight of Employment by Economic Areas as at May 1, 1937	100·0	7·9	28·9	42·8	11·7	8·7

Note.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

the beginning of May in the years for which statistics are available. The level of employment was higher than at May 1, 1936, when the general gain indicated by 1,312 establishments had been somewhat larger; they then employed 139,007 men and women.

Quebec.—Statements were tabulated from 176 firms with 13,033 employees, as against 12,461 at April 1. Most of the improvement took place in shipping, building and manufacturing. The increase involved practically the same number of workers as that recorded at the corresponding date in 1936, when the index was rather lower. The 168 employers furnishing data had then had 12,745 workers on their payrolls.

Toronto.—Transportation, building and road construction and maintenance, trade and manufacturing reported increases in personnel in Toronto. The advance in manufacturing, which was most marked, was of a general character, but the largest additions to personnel were in the electrical apparatus and iron and steel groups. According to information furnished by 1,524 concerns in Toronto, their staffs aggregated 133,499 persons, as compared with 131,508 at April 1. This increase was similar to that indicated at May 1 of last year, and also approximated the average gain at the same date in the fifteen previous years for which data for Toronto are available. Employment was in greater volume than at the beginning of May last year, when statistics had been received from 1,435 establishments employing 122,705 assistants, as compared with 120,825 in the preceding month; the index then, at 100·2, was decidedly lower than that of 107·4 recorded at the latest date.

Ottawa.—Construction, transportation, manufacturing and trade registered moderate improvement in Ottawa; 200 employers reported payrolls aggregating 14,140, compared with 13,531 in the preceding month. The general increase in this city was on much the same scale as that noted at the beginning of May, 1936, but the index then stood at 107·7, compared with 106·6 at the date under review. For the former, 179 firms had made returns, showing personnel numbering 13,996, or 612 more than at April 1, 1936.

Hamilton.—A combined working force of 36,085 was employed by the 290 co-operating establishments, as against 34,902 at April 1. Manufacturing was decidedly brisker, and

May 1	101·1	97·6	107·4	106·6	111·9	152·9	93·5	105·6
Relative Weight of Employment by Cities as at May 1, 1937	15·0	1·3	13·2	1·4	3·6	2·1	4·0	3·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

transportation also showed improvement, while little general change was noted in other lines of business. Industrial activity was at a decidedly higher level than in the same month of 1936, when a smaller advance had been indicated by 280 employers, who reported a staff of 31,531 workers.

Windsor.—Further moderate improvement was shown in Windsor, most of the gain occurring in construction work. Returns for May 1 were tabulated from 177 firms with 20,878 workers, compared with 20,692 in the preceding month. Larger additions to their payrolls had been recorded by the 170 industries reporting at May 1, 1936, when they employed 18,498 men and women. Employment was then at a lower level, the index standing at 136·1, as compared with 152·9 at the date under review.

Winnipeg.—Manufacturing, transportation and trade showed heightened activity in Winnipeg, where the 481 co-operating employers had 40,079 persons on their payrolls, compared with 39,245 at April 1. Employment was in greater volume than at the same date of last year, when a decline had been noted in the 474 establishments for which information had been furnished; their personnel included 37,542 men and women, or 327 fewer than at April 1, 1936.

Vancouver.—The number of persons employed in manufacturing increased in Vancouver, the lumber and iron and steel groups in particular showing improvement; trade and construction were also rather brisker, while transportation was not so active. According to data received from 442 firms, they had an aggregate working force of 34,065 employees, compared with 33,695 at April 1. The index was higher than at the beginning of May of a year ago, although a larger advance had then been reported in the payrolls of the 421 co-operating business men, whose staffs had numbered 32,613 persons.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—The number of persons employed in manufacturing at the beginning of May showed a further increase, the fourth reported since the opening of the year. Returns were tabulated from 5,894 manufacturers hav-

Relative Weight of Employment by Industries as at May 1, 1937	100·0	57·1	2·4	6·7	2·2	10·1	8·4	2·7	10·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

ing 577,413 employees, compared with 562,171 at April 1, 1937. This advance was slightly greater than normal, according to the experience of the years since 1920. The unadjusted index rose from 110·8 in the preceding month to 113·8 at May 1, 1937; after adjustment for seasonal variation, the index at the latest date was 113·2, or rather better than a point higher than at April 1.

The crude index numbers at May 1 in the years for which data are available are as follows: 1937, 113·8; 1936, 102·7; 1935, 95·6; 1934, 90·2; 1933, 76·8; 1932, 85·8; 1931, 100·7; 1930, 112·4; 1929, 119·8; 1928, 109·0; 1927, 103·9; 1926, 98·8; 1925, 93·7; 1924, 94·9; 1923, 97·9; 1922, 85·5 and 1921, 86·8.

The most marked improvement at May 1, 1937, took place in lumber, iron and steel, textile, food and pulp and paper mills, but rubber, chemical, clay, glass and stone, electric light and power, electrical apparatus, non-ferrous metal, mineral product and miscellaneous manufacturing plants also showed important gains. The advance in textiles was contra-seasonal. On the other hand, tobacco factories reported curtailment.

For May 1, 1936, information had been compiled from 5,652 manufacturing establishments, employing 518,327 persons, an increase of 8,324 over their April 1 payrolls. The most marked gains had then occurred in the lumber, iron and steel, food, pulp and paper and clay, glass and stone divisions.

The experience of the years since 1920 shows that factory employment at June 1 has almost invariably increased, so that continued improvement may be anticipated for the next report.

Animal Products, Edible.—Large increases in employment were noted in fish and meat-packing plants and dairies; the improvement was not quite so extensive as that reported at May 1, 1936, but the index was then nearly ten points lower. Statements were tabulated from 300 firms in this group, employing 24,271

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative Weight	May 1, 1937	April 1, 1937	May 1, 1936	May 1, 1935	May 1, 1934	May 1, 1933	May 1, 1932

[1] The "Relative Weight" column shows the porportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

workers, or 1,143 more than at the beginning of April. There was expansion in all five economic areas, the largest being in the Maritime Provinces and Ontario.

Fur and Fur Products.—Employment in the fur division gained, according to the 62 co-operating manufacturers, who had 2,067 workers, compared with 1,952 at April 1. Activity was greater than in the corresponding period of last year, when a smaller increase had been indicated.

Leather and Products.—The leather group showed moderate improvement, according to 301 manufacturers with 24,048 employees, as compared with 23,953 in the preceding month. The gain, which occurred mainly in Ontario, was not so large as that noted at May 1, 1936; however, the index then was several points lower.

Lumber and Products.—Seasonal activity caused a pronounced advance in this group, particularly in sawmills. Data were received from 866 employers of 44,520 persons, as against 40,949 in the preceding month. There were increases in all provinces. Smaller additions to staffs had been registered at May 1, 1936, and the index then was below its level at the begining of May of the present year.

Plant Products, Edible.—There was an increase in the production of vegetable foods, chiefly in sugar and syrup and fruit and vegetable canneries. The general improvement was not so pronounced as that indicated by the firms co-operating at May 1, 1936, when the index stood at 102·2, or slightly lower than that of 103·7 at the beginning of May this year. Statements were compiled from 475 employers, whose pay-rolls aggregated 30,145, as compared with 29,586 at April 1. The gains took place chiefly in Quebec.

Pulp and Paper Products.—Further improvement was noted in these industries, in which employment was in greater volume than at the same date in 1936, when a similar advance had been reported. Increases took place at May 1, 1937, in pulp and paper and paper product mills, while printing and publishing houses generally showed little change. The working forces of the 609 co-operating establishments aggregated 65,483 employees, as against 64,382 in their last report. The largest gain was in Quebec, but the tendency was also favourable in the Maritime Provinces, Ontario and British Columbia.

Rubber Products.—Employment in rubber factories showed another increase at May 1, 1937, when the index was rather higher than in any other month since the beginning of 1931. Returns were tabulated from 54 manufacturers employing 13,327 workers, or 319 more than at the commencement of April, 1937.

Textile Products.—The trend of employment continued generally upward in this group at the begining of May, according to statistics from 1,078 manufacturers having 111,081 persons on their payrolls, as compared with 109,855 at April 1. Cotton, knitting and garment and personal furnishing factories were busier. The situation at the same date of last year had been practically unchanged from the preceding month; the May 1, 1936, index stood at 118·6, compared with 128·8 at the date under review.

Tobacco, Distilled and Malt Liquors.—Data were received from 186 plants in this group employing 16,787 persons, or 258 fewer than in the preceding month. This decrease, which was much smaller than that recorded at May 1 of last year, took place chiefly in tobacco manufacturing in Ontario. Activity was at a rather higher level than at the same date in 1936.

Chemicals and Allied Products.—Employment in chemical and allied products showed an increase; this occurred mainly in Ontario, although there was also an upward trend in the Maritime Provinces and Quebec. Information was compiled from 202 manufacturers, whose staffs included 12,760 men and women, as against 12,290 in April. The gain was larger than that of May 1 a year ago, when the index was many points lower.

Clay, Glass and Stone Products.—Building material factories in all provinces indicated seasonal improvement, but this resulted in the employment of a rather smaller number of additional workers than that reported at the beginning of May last year; however, the index was then ten points lower. The 203 co-operating firms had 9,922 employees, as against 9,084 in the preceding month.

Electric Light and Power.—Improvement was recorded at May 1 in electric current plants, in which employment was rather brisker than in the spring of 1936. Statements were received from 96 companies employing 14,436 workers, an increase of 377 over their April 1 forces.

Electrical Apparatus.—Employment, on the whole, advanced substantially in electrical appliance works, according to data furnished by 125 establishments, which had 19,070 employees. Smaller additions to staffs had been registered at May 1, 1936, when the index was considerably lower.

Iron and Steel Products.—The rolling mill, machinery, land vehicle, iron and steel fabrication, heating appliance, sheet metal, agricultural implement, foundry and machine shop and some other groups reported moderately heightened activity at May 1, employment in the iron and steel group as a whole showing its fifth increase this year. Returns were tabu-

lated from 872 manufacturers with 142,650 operatives, as compared with 138,912 in the preceding month. Smaller gains had been indicated at the beginning of May of last year, and employment was then in less volume. The movement was upward in all five economic areas, that in Ontario being especially pronounced.

Non-Ferrous Metal Products.—Non-ferrous metal products showed heightened employment, according to data from 172 firms with a working force of 24,217 persons, or 471 fewer than at April 1. Most of the advance took place in smelters and refineries. Curtailment had been recorded in this group in the same month in 1936, and the index number was then much lower.

Mineral Products.—Improvement was indicated in the mineral products division; the increase in personnel was much larger than that which occurred at May 1 of a year ago, when the index number was decidedly lower. Reports were received from 143 manufacturers, whose payrolls included 14,706 persons, as compared with 14,165 in the preceding month. The greatest advances were in Quebec, Ontario and the Prairie Provinces.

Logging

Seasonal losses that exceeded the average for May 1 in the last sixteen years were recorded in logging; increases in British Columbia were more than offset by reductions in the other provinces. The 352 co-operating firms employed 24,822 men, or 13,161 fewer than at April 1. The index, at 86·7, was slightly lower than at the beginning of May in 1936, but was higher than at May 1 in many years of the record.

Mining

Coal.—Employment in coal-mining showed a seasonal contraction; although this was smaller than that noted in the same month of last year, the index was practically the same as at May 1, 1936. Data were received from 105 operators with 22,775 employees, as compared with 23,757 in the preceding month. The decline took place mainly in the coalfields in the Prairie Provinces, there being moderate improvement in those in Nova Scotia and British Columbia.

Metallic Ores.—There was a further increase in metallic ore mines, chiefly in Quebec, Ontario and British Columbia. An aggregate working force of 36,196 persons was employed by the 218 co-operating firms, who had 35,526 workers in their last report. A slightly larger advance had been indicated at the beginning of May a year ago, but activity then was not so great as at the date under review, when it reached the highest level recorded in any year since 1920.

Non-metallic Minerals (Other than Coal).—Employment in this group showed a seasonal gain; 83 employers enlarged their payrolls by 905 workers to 9,038 at the beginning of May. Quarries and other divisions reported hightened activity. The index was higher than at May 1, 1936, when the indicated improvement had been on a smaller scale.

Communications

An increase was noted in communications, in which the level of employment was higher than at the corresponding date of last year. The co-operating branches and companies reported an aggregate working force of 22,143 persons, or 388 more than at the beginning of April.

Transportation

Street Railways and Cartage.—Improvement was shown in local transportation at May 1, when the 237 firms from whom information was received, reported 26,313 employees, or 173 more than in the preceding month. The index was rather higher than at the same date in 1936, although a larger gain had then been noted. The Prairie Provinces registered most of the advance recorded at May 1, 1937, but the tendency was generally favourable except in the Maritime Provinces.

Steam Railways.—Steam railway operation afforded less employment in the Maritime Provinces, while elsewhere heightened activity was shown. Statements were received from 100 employers in this division, whose payrolls increased from 57,787 persons at April 1 to 59,594 at the beginning of May. A minor gain had been noted at May 1, 1936, when the index was between two and three points lower.

Shipping and Stevedoring.—A combined staff of 16,261 men, as compared with 11,596 in the preceding month, was reported by the 111 firms furnishing statistics in the water transportation group. The seasonal improvement approximated that noted at the same date last year, and the index then was practically the same. Reductions in the Maritime Provinces and British Columbia were more than offset by increases in Quebec and Ontario.

Construction and Maintenance

Building.—Employment in building construction showed further and greater expansion, but the industry was not so active as at May 1, 1936. The working forces of the 718 co-operating contractors aggregated 18,486 persons, as against 14,867 at the beginning of April. The trend was favourable in all prov-

inces, being particularly so in Quebec and Ontario.

Highway.—Work on roads and highways increased at the beginning of May; 14,051 men were taken on by the 332 employers making returns, who had 40,216 workers at May 1. There were gains in all five economic areas, those in Quebec being most noteworthy. A much smaller advance had been recorded at the same date last year, when employment on the highways was in greater volume than in the spring of the present year.

Railway.—Thirty-seven companies and divisional superintendents in this group employed 26,097 workers, as against 22,731 in their last report. There were general increases except in Quebec, but the improvement in the Prairie Provinces was most pronounced. Expansion involving a smaller number of workers was noted at the beginning of May a year ago; the index number then was some three points lower than at the date under review.

Services

The service group showed considerably heightened activity, according to statements from 470 establishments employing 27,246 persons, as against 26,692 in their last report. Gains were made in laundries and dry-cleaning plants and in hotels and restaurants. Employment was brisker than at May 1 of 1936, or of any other year since 1930.

Trade

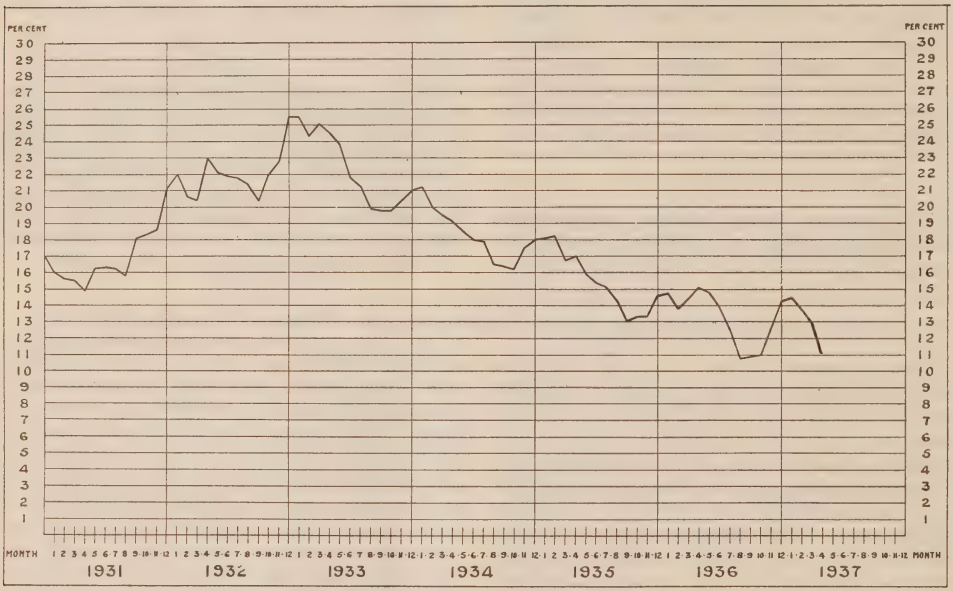
Continued additions to personnel were shown in wholesale and retail trade; 1,349 trading establishments enlarged their forces by 858 persons to 104,874 at the date under review. The increase in the group as a whole approximated the average for May 1 in the years, 1921-1936. The index was higher than at the beginning of May in any other year of the record.

TABLES

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The column headed "relative weight" shows the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at May 1, 1937.

(2) Unemployment in Trade Unions at the Close of April, 1937

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons engaged at work outside their own trades or who are idle because of illness are not considered as unemployed, while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.



Slight improvement in the local trade union situation was apparent at the close of April from the preceding month, according to the returns compiled from a total of 1,810 labour organizations involving 188,887 members. Of these, 20,958 or a percentage of 11·1 were without work as compared with a percentage of 12·9 in March. The level of activity was also higher than that of April, 1936, when 15·1 per cent of unemployment was reported. Conditions for Quebec and Ontario members were moderately better during April than in the previous month and gains, on a smaller scale, were manifest by British Columbia, Saskatchewan and Manitoba unions. Employment for Alberta members, however, was somewhat retarded during April, and in New Brunswick and Nova Scotia very slight recessions were evident. When contrasted with the returns for April, 1936, Quebec, British Columbia and Ontario unions reported noteworthy employment advancement during the month reviewed, and in Manitoba and New Brunswick increases of much lesser degree occurred. Alberta and Saskatchewan unions showed but a slight upward tendency. In Nova Scotia, however, the unemployment percentage remained identical with that of April, 1936.

Returns on unemployment affecting local trade union members in the largest city in each province, with the exception of Prince Edward Island, are compiled separately each month. During April, Montreal and Regina unions showed rather noteworthy gains in work afforded over March, and in Vancouver, Edmonton, Toronto and Winnipeg lesser improvement was registered. Some falling off in employment, however, was apparent among Halifax members, and in Saint John an adverse tendency was noted though the change from March was very slight. Compared with the reports for April a year ago, Saint John members were considerably better engaged during the month under survey, and the level of activity for Edmonton, Vancouver, Montreal and Toronto members showed a substantial

rise. In Winnipeg, more moderate advances were noted, Regina unions showing but a slight employment increase. Halifax unions, however, reflected a less favourable situation than in April, 1936.

Appearing with this article is a chart which illustrates the course of unemployment by months from January, 1931, to date. The trend of the curve during April was downward from the previous month and evidence of a greater volume of work available. At the close of the month the curve reached a point below that of April, 1936, showing a betterment of conditions during the period surveyed.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Heightened activity, on a small scale, was manifest in the manufacturing industries during April, over both the preceding month and April last year, the 498 organizations furnishing reports with an aggregate of 63,966 members showing that 6,800 or 10·6 per cent were idle on the last day of the month contrasted with percentages of 12·2 in March and 11·4 in April, 1936. The garment trades registered improvement in conditions from March affecting the greatest number of members, the gains being almost wholly confined to the province of Quebec. A decidedly better situation also obtained for hat, cap and glove workers than in March, and considerable expansion was indicated also, by metal polishers and woodworkers. General labourers showed but moderate employment advancement and nominal increases in activity were reflected by iron and steel, and jewellery workers, meat cutters and butchers, pulp and paper makers, and bakers and confectioners. Brewery workers, on the contrary, recorded marked increases in slackness from March, and among leather and glass workers recessions of much smaller proportions were noted. Activity for printing tradesmen, textile and carpet, cigar and tobacco workers also, eased off slightly from March. Among fur workers, however, the same volume of employment was afforded as in the previous month. Conditions were substantially more favourable for wood, textile and carpet, hat, cap and glove workers, and metal polishers, than in April last year, and among cigar and tobacco workers, and bakers and confectioners noteworthy expansion was evident. Printing tradesmen, and iron and steel workers showed more moderate gains, and among leather and jewellery workers, and general labourers, the tendency was upward, though the changes were less than one per cent. On the other hand, glass and fur workers, whose combined membership was rather small and hence did not materially affect the percentage in the manufacturing industries, as a whole, registered pronounced percentage losses in employment from April last year. Among brewery and garment workers curtailment of noteworthy degree was recorded, pulp and paper makers, and meat cutters and butchers showing lesser declines in work available.

There was some slowing up in activity among coal miners during April from the preceding month as evident from the reports received from 51 unions with a membership numbering 18,277 persons. Of these, 2,963 or 16·2 per cent were idle at the end of the month as compared with a percentage of 13·5 in March. Inactivity in the Alberta coal mines was the determining factor in this adverse situation noted from March. Conditions varied very slightly in Nova Scotia from March, though the tendency was less favourable. British Columbia unions alone recorded increased employment, on a small scale. Unemployment in the coal mining industry, as a whole, remained at much the same level as in April, 1936, when 16·6 per cent of inactivity was recorded. In this comparison, Nova Scotia, Alberta and British Columbia miners all showed a less favourable trend of employment during the month reviewed, but the changes were quite slight. In addition to the miners reported as entirely out of work, a considerable number were indicated as working at greatly reduced time.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Continued employment expansion was noted in the building and construction trades during April, unemployment standing at 30·8 per cent as contrasted with a percentage of 39·1 in March. The percentage for April was based on the reports tabulated from 202 associations involving 18,445 members, 5,678 of whom were without work on the last day of the month. Substantial recovery was also reflected from April, 1936, when 44·8 per cent of idleness was recorded. Steam-shovelmen, and tile-layers, lathers and roofers showed extensive percentage gains from March which, however, affected few workers as their membership was small. Bricklayers, masons and plasterers, and painters, decorators and paper-hangers were afforded a much greater volume of work than in March and conditions were considerably better for carpenters and joiners, and granite and stone cutters. More moderate improvement was evident among electrical workers, bridge and structural iron workers and plumbers and steam fitters. Hod carriers and building labourers alone, reported losses in employment from March which were rather noteworthy. In making a comparison with the returns for April, 1936, all groups of tradesmen with the exception of granite and stonecutters, participated quite substantially in the more favourable employment movement noted during the month surveyed. The gains, viewed from a percentage basis, were more particularly pronounced among steam-shovelmen, tile layers, lathers and roofers, and bridge and structural iron workers, though the improvement recorded by carpenters and joiners, painters, decorators and paper-hangers, and bricklayers, masons and plasters involved the greatest number of members. The recessions noted by granite and stone-cutters, however, were rather moderate.

A favourable trend of employment was indicated in the transportation industries during April from the preceding month, though the change was slight as manifest by the reports forwarded from 812 associations with a membership aggregating 61,330 persons. Of these, 4,045 or 6·6 per cent were idle on the last day of the month in contrast with a per-

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Government	Miscellaneous	All occupations

centage of 7·5 per cent in March. Improvement in slightly greater measure was reflected from April, 1936, when 9·0 per cent of unemployment was recorded. Steam railway employees whose returns constituted about 80 per cent of the entire group membership reported, were slightly better engaged both when compared with the returns for March and for April, 1936. The situation for navigation workers was considerably more favourable than in March, and employment advances, on a small scale, were evident from April last year. Among teamsters and chauffeurs, nominal increases in employment were recorded from the previous month, but noteworthy gains were shown from April, 1936. Activity for street and electric railway employees, however, eased off very slightly both from the preceding month and April a year ago.

No unemployment was reported by retail shop clerks during April as in March, though in April last year 4·4 per cent of inactivity was registered. For the month reviewed 3 associations of these workers made returns to the Department embracing a membership of 1,016 persons.

Civic employees during April maintained an almost unchanged situation from March, the 77 associations from which reports were tabulated with a total of 8,611 members, showing that 134 or 1·6 per cent were idle at the end of the month in contrast with a percentage of 1·7 in March. A more favourable tendency was noted from April last year when 3·2 per cent of inactivity was recorded.

The 129 unions in the miscellaneous groups of trades from which returns were compiled during April, comprising a membership of 7,409 persons showed that 561 or a percentage of 7·6 were unemployed on the last day of the month in contrast with a percentage of 7·7 in March. Stationary engineers and firemen, theatre and stage, and hotel and restaurant employees showed a slight rise in work afforded from March which was largely offset by the recessions evident among barbers and unclassified workers. Conditions in the miscellaneous group of trades, as a whole, were substantially improved from April a year ago when 16·9 per cent of idleness was reported, barbers particularly showing extensive gains. Among hotel and restaurant, and theatre and stage employees, and stationary engineers and firemen, increases in activity, on a much smaller scale, were manifest, unclassified workers alone, showing a nominal adverse change.

Fishermen, with 3 unions reporting a membership of 590 persons, showed an unemployment percentage of 3·2 as contrasted with a percentage of 9·4 in March and 0·7 in April last year.

The trend for lumber workers and loggers during April was toward increased activity though the change from March was less than one per cent. This was evident from the reports tabulated for April from 2 unions with a membership numbering 1,166 persons, 2·3 per cent of whom were unemployed on the last day of the month, in comparison with a percentage of 2·7 in March. Pronounced employment recovery was apparent however, from April last year when 16·1 per cent of the members reported were out of work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1936 inclusive and also the percentages of unemployment by provinces for April of each year from 1919 to 1934 inclusive and for each month from April, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for April, 1937

The volume of business transacted by the offices of the Employment Service of Canada during April, 1937, as indicated by the average daily placements effected, showed gains of more than 16 per cent over March and of nearly 4 per cent over April a year ago. In comparison with the preceding month, all industrial divisions, except logging, registered increases, the highest being in services, farming, construction and maintenance and manufacturing. When compared with the corresponding period a year ago, logging, services, manufacturing, transportation and mining also reported increased placements, the most noteworthy additions being in the first two groups, while construction and maintenance and farming recorded fairly heavy declines and trade a minor reduction.

The accompanying chart shows the trend of employment from January, 1935, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for employment registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications declined very slightly during the first half of the month, but followed a marked upward course during the latter half of the period under review, reaching levels about four points higher than those registered at the end of April a year ago. The ratio of vacancies to each 100 applications was 47·0 and 58·1, respectively, during the first and the second half of April, 1937, in contrast with ratios of

50·2 and 53·8 during the corresponding periods of 1936. The ratios of placements to each 100 applications during the periods under review were 42·5 and 51·9, as compared with 46·0 and 48·6 during April, 1936.

The average number of vacancies reported daily to the offices of the Service throughout Canada was 1,161, as compared with 1,006 in the previous month and with 1,106 in April a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,223, as compared with 2,034 in March and with 2,119 in April a year ago.

The average number of placements made daily by offices of the Service during April, 1937, was 1,042, of which 702 were in regular employment and 340 in work of one week's duration or less, as compared with a total daily average of 895 during the preceding month. Placements in April last year averaged 1,005 daily, consisting of 593 placements in regular and 412 in casual employment.

During the month of April, 1937, the offices of the Service referred 28,397 persons to vacancies and effected a total of 27,089 placements. Of these, the placements in regular employment were 18,244, of which 13,359 were of men and 4,885 of women, while placements in casual work totalled 8,845. The number of vacancies reported by employers was 18,182 for men and 11,986 for women, a total of 30,168, while applications for work numbered 57,778, of which 43,921 were from men and 13,857 from women. Reports for March, 1937, showed 25,126 positions available, 50,848 applications made and 22,353 placements effected, while in April, 1936, there were recorded 26,521 vacancies, 50,836 applications for work and 24,102 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927, to date:

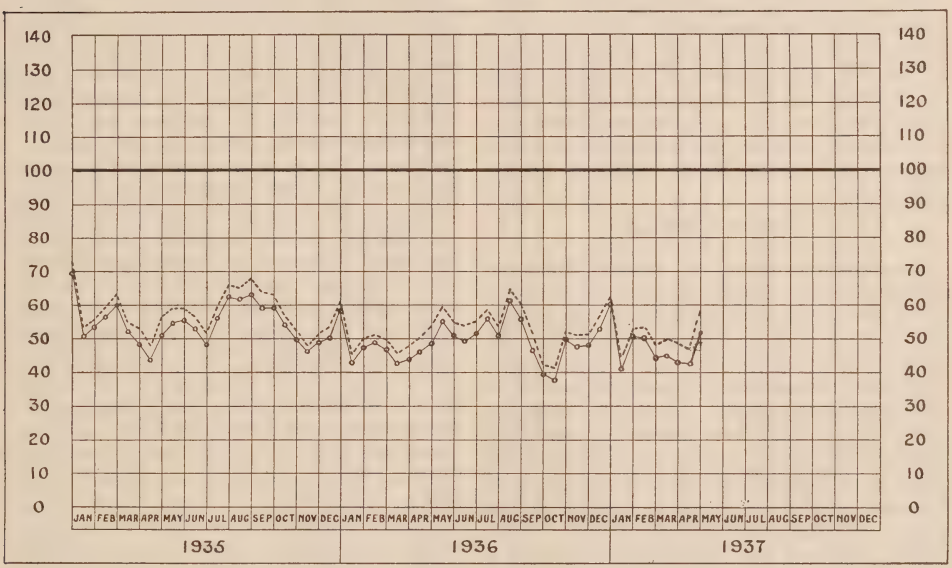
Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937 (4 months)	70,515	30,903	101,418

NOVA SCOTIA

Opportunities for employment, as indicated by orders received at Employment Offices in Nova Scotia during April, 1937, were nearly 14 per cent better than during the preceding month and also the corresponding month of last year. There was likewise an increase of almost 13 per cent in placements when compared both with March, 1937, and with April a year ago. The only increase of importance in placements over April, 1936, was in services, although logging showed a moderate gain. The heaviest decline was reported in construction and maintenance. Nominal changes only were reported in all other groups. During the month 272 placements were effected in construction and maintenance, 71 in logging, 40 in manufacturing and 535 in services. Of the latter, 366 were of household workers. Placements in regular employment numbered 144 of men and 79 of women.

NEW BRUNSWICK

During the month of April, positions offered through Employment Offices in New Brunswick were over 33 per cent higher than in the preceding month and over 30 per cent above the corresponding month of last year. There was a gain also in placements of over 32 per cent when compared with March, 1937, and of more than 29 per cent in comparison with April, 1936. The most important gain in placements over April last year was in services. Changes in other groups were small. Placements during the month in services numbered 723, of which 532 were of household workers. There were 23 men and 123 women placed in regular employment.



QUEBEC

There was an increase of over 26 per cent in the number of orders received at Employment Offices in the Province of Quebec during April when compared with the preceding month and of nearly 42 per cent in comparison with April, 1936. Placements were 25 per cent higher than in March and more than 39 per cent above April a year ago. The substantial increase in placements over April, 1936, was due to gains in construction and maintenance, logging, services and manufacturing, small gains only being reported in all remaining groups. Placements by industrial divisions included:—manufacturing, 495; logging, 819; farming, 45; construction and maintenance, 1,782; trade, 92 and services, 2,523, of which 2,244 were of household workers. Placements in regular employment during April numbered 3,094 men and 1,756 women.

ONTARIO

The demand for workers, as indicated by orders received at Employment Offices in Ontario during April, was nearly 31 per cent better than in the preceding month and over 9 per cent above that reported during the corresponding month of last year. Placements were about 35 per cent above March, 1937, and 9 per cent above April, 1936. Nearly all industrial divisions reported gains over April a year ago, the highest being in logging, manufacturing, services, farming and transportation, below those of April, 1936. Marked declines in placements from April last year were registered in farming and construction and maintenance, with other smaller losses shown in services and trade. The only noteworthy gain was in logging. Placements by industrial divisions included:—manufacturing, 23; logging, 163; farming, 682; construction and maintenance, 85; trade, 20 and services, 570, of which 487 were of household workers. During the month 934 men and 309 women were placed in regular employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

with a heavy decline recorded in construction and maintenance, in which group fewer placements on relief projects had been made. Placements by industrial groups included:—manufacturing, 781; logging, 842; farming, 1,524; mining, 74; transportation, 219; construction and maintenance, 2,449; trade, 280 and services, 4,007. Of the latter, 2,555 were of household workers. There were 4,822 men and 1,430 women placed in regular employment during the month.

MANITOBA

Orders received at Employment Offices in Manitoba during April called for nearly 3 per cent more workers than in the preceding month but over 22 per cent fewer than during April a year ago. Placements were 2 per cent less than in March and nearly 24 per cent

SASKATCHEWAN

Employment opportunities, as indicated by orders received at Employment offices in Saskatchewan during April were nearly 44 per cent better than in the preceding month, but over 8 per cent below those recorded in the corresponding month last year. There was an increase also in placements of 66 per cent when compared with March, but a decline of 6 per cent in comparison with April, 1936. Farm placements were considerably less than during April last year and largely accounted for the decline under this comparison, although minor decreases were reported in construction and maintenance, trade and manufacturing, services alone showing a moderate gain. Industrial divisions in which most of the placements were effected during the month were:—farming, 1,350; construction and maintenance, 101 and

services, 799, of which 648 were of household workers. There were 1,357 placements of men and 484 placements of women in regular employment.

ALBERTA

During the month of April, positions offered through Employment offices in Alberta were over 23 per cent higher than in the preceding month, but only slightly above those reported during the corresponding month of last year. There was a gain also in placements of 25 per cent when compared with March and of 3 per cent in comparison with April, 1936. Gains in placements over April last year were shown in construction and maintenance, services, transportation and logging, but these were largely offset by a substantial loss in farming and a smaller one in manufacturing. Placements by industrial divisions included:—manufacturing, 71; logging, 30; farming, 879; transportation, 44; construction and maintenance, 485; trade, 32 and services, 622. Of the latter, 446 were of household workers. During the month 1,475 men and 423 women were placed in regular employment.

BRITISH COLUMBIA

Employment offices in British Columbia were notified of over 17 per cent fewer vacancies during April than in the preceding month, but nearly 32 per cent more than in the corresponding month a year ago. Similar percentages of change were reported in placements under both comparisons. Increased placements during April, 1937, were shown in nearly all groups, the most noteworthy gains being recorded in logging and services, followed by increases of smaller volume in manufacturing, mining, farming, transportation and trade. Construction and maintenance alone showed a decline. Industrial divisions in which most of the placements were effected during the month were:—manufacturing, 79; logging, 561; farming, 203; mining, 53; construction and maintenance, 1,363 and services, 956, of which 543 were of household workers. There were 1,510 placements of men and 281 placements of women in regular employment.

Movement of Labour

During the month of April, 1937, the offices of the Employment Service of Canada made 18,244 placements in regular employment, 9,221 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 843 were granted the Employment Service reduced transportation rate, 697 travelling to points within the same province as the despatching office and 146 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec transfers at the reduced rate during April originated at Hull and were of bushmen, 99 in number bound for employment in the Pembroke zone. Ontario offices issued 549 certificates for reduced transportation during April, 546 provincial and 3 interprovincial. The latter were granted at the Sudbury office to mine carpenters travelling to the Rouyn zone. Provincially, from Port Arthur 292 bushmen, 12 mine workers, 2 fishermen, one teamster, one blacksmith, one blacksmith's helper and one hotel worker were transferred within the territory covered by that city office, while from Fort William 142 bushmen, 3 hotel workers, 2 painters and one stationary engineer, and from Sudbury 74 bushmen journeyed to employment within their respective zones. The Sudbury office, in addition, shipped 3 miners to Port Arthur. From North Bay 6 painters were conveyed to Timmins. The Pembroke office was instrumental in transferring one cook and one night watchman to North Bay, the Hamilton office one gardener to Ottawa, the Timmins office one mine mechanic to Fort William and the Windsor office one clothing worker to Hamilton. The Winnipeg office was responsible for all transfers at the reduced rate in Manitoba during April totalling 65, of which 21 were to provincial centres and 44 to other provinces. Workers travelling within the province were destined to the Winnipeg zone, among whom were 10 farm hands, 2 farm domestics, 3 mine workers, 2 cooks, one blacksmith, one labourer, one bushman and one barber. Of the transfers outside the province 43 were to the Port Arthur zone, and included 32 bushmen, 3 sawmill workers, 2 blacksmiths, 2 cooks, one mechanic, one hoist engineer, one hotel waiter and one housekeeper. To the Yorkton zone one farm hand was conveyed at the reduced rate. In Saskatchewan during April 3 persons profited by the Employment Service reduced transportation rate, these going to provincial employment. From Saskatoon 2 bushmen journed to Prince Albert and from Moose Jaw one teacher was sent to a situation within the same zone. The labour movement in Alberta during April was entirely provincial and comprised the transfer of 110 persons. Travelling from Edmonton 26 bush workers, 23 transportation employees, 12 farm hands, 2 farm domestics, 8 oil well employees, 6 fish company employees, 5 highway construction workers, 5 mine workers, 5 hotel employees, 4 household workers, 2 cafe cooks, 2

• 237 placements effected by offices since closed.

39726—6½

sawmill workers, one cleaner, one blacksmith, one granite cutter and one labourer went to various sections of the Edmonton zone, and one domestic to Calgary. The Calgary office was instrumental in the despatch of one farm hand to Drumheller, one machinist to Medicine Hat and 3 farm hands within the Calgary zone. Offices in British Columbia granted 17 certificates for reduced transportation during April to provincial centres. On certificates received at Vancouver 2 farm hands, one farm cook and 2 mine workers proceeded to Kamloops, one labourer and one hotel waitress to Nelson and 7 mine workers to employment in the Vancouver zone. The Penticton zone was the destination of one farm hand travelling from Nelson. Within its own zone the Prince George office transferred one sawmill labourer and one teamster.

Of the 843 persons who benefited by the Employment Service reduced transportation rate during April 331 were carried by the Canadian National Railways, 491 by the Canadian Pacific Railway, 8 by the Northern Alberta Railway, 7 by the Temiskaming and Northern Ontario Railway and 6 by the Pacific Great Eastern Railway.

(4) Building Permits issued in Canada during April, 1937

The Dominion Bureau of Statistics tabulated returns from 58 cities which granted permits for construction work valued at $6,098,036 during April, as compared with $6,654,516 in the preceding month, and $3,237,366 in the same month of last year. There was, therefore, a decline of $556,480 or 8·4 p.c. as compared with March, but in the more significant comparison with April, 1936, there was an increase of $2,860,670, or 88·4 p.c.

The estimated value of the construction authorized in the first four months of the present year was $16,568,165; this was considerably higher than the aggregate of $8,829,837 reported in the period January-April, 1936, being also higher than in these months of any other year since 1931. The cumulative total for the first four months in each of the last six years has been very much lower than in any earlier year of the record; the wholesale prices of building materials, though showing an upward movement in recent months, continue below the average for the seventeen years, 1920 to 1936.

Some 50 cities furnished detailed statistics for April, 1937, showing that they had issued more than 500 permits for dwellings valued at approximately $1,800,000, and for over 2,700 other buildings, estimated to cost almost $3,400,000. There was also reported one engineering project, valued at $357,000. In March, authority was given for the erection of about 370 dwellings and 1,600 other buildings, valued at approximately $1,210,000 and $5,400,000, respectively.

Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Manitoba, Saskatchewan and Alberta recorded increases in the value of the building represented by the permits issued during April as compared with the preceding month, the greatest gain of $764,079 or 119·4 p.c. taking place in Quebec. In Ontario and British Columbia there were in this comparison declines of $1,192,677 or 30·5 p.c. and $828,410, or 44·3 p.c., respectively.

As compared with April, 1936, there were increases in Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia, that of $1,386,619 or 104·3 p.c. in Ontario and $970,045 or 218·4 p.c. in Quebec being most noteworthy. In this comparison, Prince Edward Island, New Brunswick and Alberta showed declines, of which that of $389,069 or 59·6 p.c. in Alberta was greatest.

Three of the four largest cities,—Montreal, Toronto and Winnipeg—registered increases in the building authorized during April as compared with the preceding month, and also as compared with April, 1936. In Vancouver, the value was lower than in March, 1937, but higher than in April of last year. Of the other centres, Halifax, New Glasgow, Sydney, Moncton, Saint John, Shawinigan Falls, Sherbrooke, Three Rivers, Westmount, Fort William, Guelph, Hamilton, Kingston, Kitchener, London, Niagara Falls, Owen Sound, Port Arthur, St. Catharines, Sarnia, Sault Ste. Marie, Welland, Riverside, Woodstock, Brandon, St. Boniface, Moose Jaw, Saskatoon, Lethbridge, Medicine Hat, Nanaimo and North Vancouver reported increases in the value of the permits issued as compared with March, 1937, and also with April, 1936.

The following table gives the value of the building authorized by 58 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first four months of the same years are also given, (1926 = 100).

Year	Value of permits issued in April	Value of permits issued in first four months	Indexes of value of permits issued in first four months (1926=100)	Average indexes of wholesale prices of building materials in first four months (1926 average=100)
	$	$		
1937	6,093,036	16,568,165	39·9	93·8
1936	3,237,366	8,829,837	21·3	84·2
1935	6,300,046	14,807,316	35·6	81·5
1934	2,269,157	4,980,156	12·0	82·4
1933	1,595,502	4,661,323	11·2	75·1
1932	4,370,863	13,823,873	33·3	79·1
1931	13,495,165	38,241,259	92·1	83·7
1930	16,978,076	46,471,338	111·9	96·2
1929	29,656,709	72,606,937	174·8	99·4
1928	18,606,167	51,769,505	124·6	95·7
1927	17,312,470	42,340,823	101·9	96·3
1926	19,044,499	41,538,073	100·0	101·7
1925	15,482,383	35,463,398	85·4	103·1
1924	13,689,101	31,737,100	76·4	111·6
1923	19,530,851	39,008,970	93·9	110·8
1922	15,833,688	34,513,861	83·1	107·7
1921	13,500,360	27,069,872	65·2	136·9
1920	15,648,915	34,558,901	83·2	143·1

As already stated, the aggregate for the first four months of this year was decidedly higher than in the same period of 1936, and also substantially exceeded that for any preceding year since 1931. The index numbers of wholesale prices of building materials in 1937, though higher than in the months, January-April in any of the preceding six years, continue lower than in the same period in each of the years, 1920-1930.

Table 1 gives the value of the building permits issued by 58 cities during April and March, 1937, and April, 1936. The 35 cities for which records are available since 1910 are marked thus "x."

ESTIMATED VALUE OF CONSTRUCTION WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 58 CITIES

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF MAY, 1937

Reports of the Superintendents of the Employment Service

The employment situation at the end of May, 1937, was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Farmers in the Maritime Provinces were busy with spring planting, but in some districts work had been retarded to cold wet weather. Pulp cutting was in progress with a steady demand for experienced pulp cutters, peelers and mill labourers. Three sawmills also were in operation in the up-river section of the Miramichi and rafting of logs at booms along the river was progressing. Fishermen were busy and catches of salmon, lobster, cod, shad and gaspereaux were fairly heavy. Coal mines in the New Glasgow area operated from three to five days per week, while the majority of those in Cape Breton and vicinity worked from four to five days. Manufacturing remained unchanged, nearly all plants running steadily and conditions generally good. Many alterations and improvements to premises accounted for increased activity in the building trade. Highway construction was progressing rapidly. Transportation was brisk and trade, both wholesale and retail, was seasonally good. Many requests also were received for household workers in the women's division and placements made accordingly.

Farm placements in the Province of Quebec increased considerably and the previous activity noted by Hull and Chicoutimi in logging continued, several thousand men being engaged in log driving. Mining showed little change. Manufacturing centres reported as follows: Hull—match, paper and toy plants in full operation; Montreal—clothing, boots and shoes active, but tobacco, cigars and rubber quiet; Quebec City—factories busy. Building construction showed improvement. General construction undertakings, as well as paving and repairs, were numerous, many skilled tradesmen thus obtaining employment. Trade, in general, was better. A number of vacancies for charwomen and cooks were listed in domestic service in the women's division, but in some districts a scarcity of applicants was noticeable.

Numerous requests for farm help were listed in Ontario, with experienced hands difficult to obtain in some localities. Tobacco planting, also, was under way in Brant and Norfolk counties. The demand for experienced pulp wood cutters exceeded the supply, although in other branches of logging plenty of men were available. Nearly all sawmills were running and some river driving had been done. Activity at the producing mines remained steady, but smaller prospects were handicapped by lack of funds for development. Improvement recorded in manufacturing during recent months was well maintained. Additional workers had been taken on in some industries and minor reductions had been made in others, but pay rolls in practically all lines were well ahead of those of a year ago. Few skilled iron, steel or metal workers were idle and at Brantford, boys had been placed with a number of local concerns in order that they might learn skilled and semi-skilled trades; while at Toronto several ex-service men had found employment with manufacturing concerns under the probational training scheme arranged by the Federal Government. Building construction was fairly active, a large amount of work under the Home Improvement Plan being well under way, thus many unemployed stone masons and bricklayers had been absorbed, with a large reduction also noted in unemployed carpenters. Highway construction in many districts was progressing favourably, and men were being placed daily on this work in the various townships. Some employment was also available on extra gangs on the railways. The grain movement at Fort William was slow, only 20,000,000 bushels having been shipped since the opening of navigation. There were numerous requests for household and hotel and restaurant help in the women's division, some of which were difficult to fill owing to the small wages offered, or to the lack of suitability of applicants applying. A few women were placed in clerical or industrial positions, but vacancies of this kind were still rather scarce. As the season advanced, however, it was expected that a large number of girls and women would be placed at berry picking, or be employed by the canning factories.

Although the crop situation had been improved recently by heavy rains, calls for farm help in the Prairie Provinces were few in number. Wages, however, were a little higher than last year's. There was still a good demand for bush men, but this was chiefly due to requests from operators in the Port Arthur district for experienced cutters. Sawmills also were opening. Mining was very quiet and manufacturing only fair. Building construction, likewise, showed little increased activity, and railway and highway construction, too, was slowly getting under way. Trade was dull. There was a number of calls for domestics in the women's division, but a scarcity of housekeepers and domestics was reported for country positions.

Field work in British Columbia was almost finished, consequently a decrease was shown in farm orders. Logging camps were working with full crews and saw and shingle mills were all very busy. Steady development was reported from the mining areas, consequently in some districts there was a shortage of experienced drillers. Manufacturing at Nelson was unchanged. An upward trend in building construction resulted in a demand for skilled mechanics. Provincial Government forestry and road camps were filled to capacity and extra railroad gangs had been sent out for maintenance work. Shipping and longshoring were very active at New Westminster and Prince Rupert, but quiet at Vancouver, while ship yards at Victoria were only fairly busy. Trade was good. In the women's division considerable seasonal work was available and girls and women were taking these jobs in preference to regular domestic service. Placements also were made in hotels and camps, but there still was a lack of cooks general and of good domestics.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, May, 1937, summarized the employment situation as follows:—

There was a marked improvement in employment in April; the improvement was greatest in building, public works contracting and stone-quarrying (in which employment in March was adversely affected by bad weather), in coal mining, ship building and repairing, the engineering, metal goods, motor vehicle, cycle and aircraft industries, the distributive and tailoring trades, and the road transport, port transport, and hotel and boarding house services. There was also a seasonal improvement in agriculture.

It is estimated that at April 19, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,394,000. This was 152,000 more than at March 15, 1937, and 609,000 more than at April 27, 1936.

Among insured workpeople, aged 16-64 (excluding those within the agricultural scheme), the percentage unemployment in Great Britain and Northern Ireland at April 19, 1937 (including those temporarily stopped) was 10·8, as compared with 11·8 at March 15, 1937, and 13·6 at April 27, 1936. In Great Britain the percentage at April 19, 1937, was 10·5, as compared with 11·5 at March 15, 1937, and 13·4 at April 27, 1936.

At April 19, 1937, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,254,646 wholly unemployed, 128,655 temporarily stopped, 71,142 normally in casual employment, making a total of 1,454,443. This was 146,758 less than a month before, and 376,787 less than a year before. The total was made up of 1,141,011 men, 41,315 boys, 227,026 women, and 45,091 girls.

The total of 1,454,443 persons on the registers at April 19, 1937, included 621,082 persons with claims admitted for insurance benefit, 30,674 claimants whose position under the conditions relating to contributions paid and benefit received had not been determined, and 5,973 persons disqualified for short periods from receiving benefit. There were also 611,790 persons (not included in any of the foregoing classes) with applications authorized for unemployment allowances, 3,423 persons with applications for unemployment allowances under consideration, and 181,501 other persons, of whom 43,733 were juveniles under 16 years of age. The persons with claims admitted for insurance benefit included 2,455 for whom payment of allowances in supplementation of benefit had been authorized.

The extension of the scheme of unemployment assistance as from April 1, 1937, has enabled considerable numbers of persons to qualify for unemployment allowances who, before that date, were not entitled to apply.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at April 19, 1937, was 1,525,708, as compared with 1,676,825 at March 15, 1937, and 1,895,122 at April 27, 1936.

United States

In a statement issued recently by Miss Frances Perkins, Secretary of Labor, further gains in employment and pay rolls between March and April were reported in the combined manufacturing and nonmanufacturing industries surveyed each month by the United States Bureau of Labor Statistics. Approximately 98,000 additional workers found employment in these industries over the month interval and weekly pay rolls in April were $8,200,000 greater than in the preceding month, it was pointed out.

MANUFACTURING INDUSTRIES

Factory employment rose 1·1 per cent from March to April and pay rolls increased 3·7 per cent. The employment gain raised the April index (102·2) above the level of any month since November, 1929, and the April pay-roll index (104·8) stood above the level of any month since October, 1929. Comparisons with April, 1936, show gains of 14·7 per cent in employment and 32·2 per cent in weekly pay rolls over the year interval.

Fifty-eight of the 89 manufacturing industries surveyed showed gains in employment over the month interval and 63 industries reported increased pay rolls. Some of the more pronounced increases in employment were seasonal, among them being canning, 24·1 per cent; beet sugar, 13·3 per cent; fertilizers, 11·5 per cent; brick-tile-terra cotta, 8·4 per cent; ice cream, 7·2 per cent; marble-slate-granite, 6·4 per cent; cement, 6·0 per cent; paints and varnishes, 2·7 per cent; and beverages, 2·2 per cent. Cane sugar refining showed an increase of 9·9 per cent; locomotives, 6·0 per cent; steam and electric-railroad car building, 5.9 per cent; and agricultural implements, 5·7 per cent. Employment in the copper-lead-zinc smelting and refining industry increased 4·7 per cent and the automobile industry reported an increase of 4·1 per cent. Other employment gains in industries of major importance were: blast furnaces-steel works-rolling mills (2·7 per cent), electrical machinery, apparatus, and supplies (2·6 per cent), foundries and machine-shop products (2·6 per cent), steam-railroad repair shops (2·1 per cent), paper and pulp (1·3 per cent), chemicals (1·0 per cent), petroleum refining (1·5 per cent), and cotton goods (0·6 per cent). Employment in the machine tool industry, which is a barometer of orders placed for power-driven metal-cutting machinery, continued the expansion which has been shown each month, with but one exception (August, 1936), since October, 1934. The gain in this industry of 2·7 per cent from March to April raised the April employment index to 146·6, which is the maximum recorded since March, 1930, and indicates a gain of 338 per cent from the low point (33·4) registered in April, 1933.

Seasonal curtailment of operations between March and April resulted in employment decreases of 14·6 per cent in cottonseed—oil cake, and meal; 10·3 per cent in millinery; 5·0 per cent in confectionery; and 3·4 per cent in boots and shoes. Smaller declines were reported in slaughtering and meat packing, men's clothing, woollen and worsted goods, book and job printing, and rubber boots and shoes. Employment in the women's clothing industry decreased 4·2 per cent over the month interval and decreases ranging from 2·7 per cent to 3·7 per cent were reported in the shirt and collar, fur-felt hat, soap, and radio and phonograph industries.

NON-MANUFACTURING INDUSTRIES

Gains in employment from March to April were shown in 13 of the 16 non-manufacturing industries surveyed, and increased pay rolls were reported in 14 industries. Employment in each of these industries in April, 1937, stands above the April, 1936, level with the exception of bituminous coal mining. The largest percentage gains in employment over the year interval were in metalliferous mining (32·4 per cent), private building construction (17·1 per cent), quarrying and non-metallic mining (9·8 per cent), crude petroleum producing (8·9 per cent), anthracite mining (8·5 per cent), and telephone and telegraph (8·1 per cent).

WHOLESALE AND RETAIL TRADE

Reports received from 13,642 wholesale trade establishments employing 289,269 workers in April showed a net decline in employment of 0·5 per cent from March to April. The decrease was due primarily to sharp seasonal recessions in the farm products and the agent and broker groups. Among the more important lines of wholesale trade in which gains in employment were shown over the month interval were food products (1·7 per cent), hardware (0·7 per cent), machinery, equipment, and supplies (1·2 per cent), furniture and housefurnishings (0·5 per cent), electrical goods (0·6 per cent), and automotive dealers (0·3 per cent). Among the lines in which declines in employment were shown were dry goods and apparel (1·7 per cent), petroleum products (0·7 per cent), and chemicals and drugs (0·5 per cent). In wholesale groceries, employment remained virtually unchanged, the decline being less than one-tenth of 1 per cent.

Employment in 47,648 retail establishments, reporting 832,884 workers in April, rose 0·4 per cent over the month interval. The general merchandising group of retail stores, which is composed of department, variety, and general merchandising stores and mail-order houses, showed a decrease of 0·7 per cent from March to April. The gains, however, reported by establishments in other lines of retail trade offset the losses in the general merchandising group. Among the various lines of retail trade in which gains were shown from March to April were food (1·4 per cent), automotive (1·3 per cent), furniture (0·7 per cent), lumber and building materials (3·4 per cent), hardware (1·9 per cent), drugs (2·0 per cent), and apparel (0·1 per cent). The group of wood, coal and ice dealers showed a seasonal recession of 6·8 per cent from March to April.

Public Utilities

The telephone and telegraph industry continued to expand its working forces in April, the increase of 1·6 per cent continuing the gains which have been reported each month since December. Power and light and manufactured gas companies also continued to add workers to their pay rolls, employment increasing 1·1 per cent over the month interval. In electric railroad and motor-bus operation and maintenance, employment rose 0·3 per cent from March to April.

Service Industries

Four of the 5 service industries showed gains in employment from March to April. The most pronounced increase in employment in this group was a seasonal gain of 4·9 per cent in the dyeing and cleaning industry. Year-round hotels reported a gain of 1·7 per cent and brokerage firms increased their forces 0·3 per cent. Laundries showed virtually no change in employment, the increase being less than one-tenth of 1 per cent, and insurance companies reported a slight loss (0·1 per cent).

Mining Industries

Anthracite mining reported a gain of 10·5 per cent in employment from March to April, combined with an increase of 68·9 per cent in pay rolls. These gains reflect the sharp increase in production which occurred between the March 1-15 pay period and a similar period in April. A seasonal expansion of 8·3 per cent in employment was registered in the quarrying and non-metallic mining industry, and crude petroleum producing companies reported a gain of 4·5 per cent. Metalliferous mines continued to absorb additional workers, the increase of 4·2 per cent continuing the almost unbroken succession of gains which have been reported since August, 1935. The sharp decline of 16·1 per cent in employment reported by bituminous coal mines was accompanied by a drop of 39·6 per cent in pay rolls, reflecting reduced operations pending the coal wage agreement, a holiday, and curtailment of production because of accumulated stocks.

Private Building Construction

Employment in the private building construction industry increased 9·5 per cent between March and April and pay rolls rose 16·1 per cent, according to reports received from 9,061 contractors employing 106,052 workers in April. Compared with April, 1936, employment in this industry shows a gain of 17·1 per cent and pay rolls show an increase of 36·8 per cent. The reports supplied by the co-operating contractors relate to employees engaged in erecting, altering, and repairing private buildings and do not include projects financed by Public Works Administration or Reconstruction Finance Corporation funds or regular appropriations of the Federal, State, and local governments.

Public Employment

There were approximately 2,954,000 workers employed on projects financed by The Works Program in April. Compared with the previous month this was a decrease of 19,000. Of the total number, 2,101,000 were working on projects operated by the Works Progress Administration. Total pay rolls for all persons engaged on this program in April amounted to more than $135,687,000. During the month orders were placed for construction materials for use on these projects valued at more than $42,167,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no

event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922, as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned, by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the minister of the department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages

Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada.

NATIONAL HARBOURS BOARD

Contracts in Group "A" (Construction, Remodelling Repair, etc.)

Construction of a transit shed at Berth No. 1, Saint John Harbour, N.B. Name of contractors, Stewart Construction Co., Ltd., Sherbrooke, P.Q. Date of contract, May 8, 1937. Amount of contract, $183,000. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Brick and hollow tile layers	$0 90	8	44
Brick and hollow tile layers helpers (mixing and tempering mortar)	0 45	8	44
Carpenters and joiners	0 60	8	44
Compressor operators—gas. or elec	0 50	8	44
Engineers, operating, steam—			
Single or double drums	0 65	8	44
Three or more drums	0 75	8	44
Engineers, on steel erection	0 75	8	44
Firemen, stationary	0 45	8	44
Electricians (inside wiremen)	0 65	8	44
Hoist operators—gas. or elec	0 50	8	44
Labourers	0 40	8	44
Machinists	0 65	8	44
Painters, spray	0 65	8	44
Painters and glaziers	0 55	8	44
Pipe fitters (surface—temp. work)	0 55	8	44
Riggers, general	0 50	8	44
Roofers, composition	0 50	8	44
Roofers, felt and gravel, patent	0 45	8	44
Sheet metal workers	0 65	8	44
Watchman	0 35	8	44
Welders and burners on steel erec	0 75	8	44
Structural steel workers	0 75	8	44
Crane operators—gas. or elec	0 55	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

DEPARTMENT OF MINES AND RESOURCES

Contracts in Group "B" (Manufacture of Supplies, etc.)

Two contracts were awarded during the month of May by the Indian Affairs Branch of the Department of Mines and Resources to the Horn Bros. Woollen Co., Ltd., Lindsay, Ont., for (*a*) the manufacture of grey woollen I.D. blankets, and (*b*) the manufacture of grey tweed; and a contract was also awarded to the Dominion Woollens and Worsteds of Toronto, Ont., for the manufacture of wheeling yarn.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Installation of a warm air conditioner in the Armoury at Stanley Park, Vancouver, B.C. Name of contractors, Central Sheet Metal Works Company, Vancouver, B.C. Date of contract, May 4, 1937. Amount of contract, $1,848. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Bricklayers	$1 10	8	44
Carpenters	0 80	8	44
Tinsmiths	0 90	8	44
Labourers	0 45	8	44
Electricians	1 00	8	44
Plasterers	1 00	8	44
Motor truck driver	0 50	8	44
M.T. driver and truck—			
1 and 2 tons	1 50	8	44
3 tons	2 00	8	44
Driver, team and wagon	1 00	8	44
Driver	0 45	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser ours shall not be exceeded on this work.

Stuccoing the rear wall of Landplane Hangar A.1, R.C.A.F. Station, Trenton, Ont. Name of contractors, Frontenac Construction Co., Ltd., Toronto, Ontario. Date of contract, May 20, 1937. Amount of contract, $400. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters and joiners	$0 70	8	44
Labourers	0 40	8	44
Motor truck driver	0 45	8	44
M.T. driver and 1 to 2 ton truck	1 45	8	44
Plasterer	0 80	8	44
Plasterer's helper (mixing and tempering material)	0 45	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of parapet walls at the Armoury at Saint John, N.B. Name of contractors, R. A. Corbett & Co., Ltd., Saint John, N.B. Date of contract, May 22, 1937. Amount of contract, $786. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Bricklayers	$0 90	8	44
Bricklayers' helpers (mixing and tempering mortar)	0 45	8	44
Stonemasons	0 90	8	44
Stonemasons' helpers (mixing and tempering mortar)	0 45	8	44
Carpenters	0 60	8	44
Labourers	0 40	8	44
Hoist operators—gas. or elec	0 50	8	44
Driver, team and wagon	0 75	8	44
Driver	0 40	8	44
Motor truck driver and truck, 1 to 2 tons	1 45	8	44
Motor truck driver	0 45	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of concrete walls and traverses at the Dominion Arsenal, Valcartier, P.Q. Name of contractor, Mr. J. A. Auclair, Giffard P.Q. Date of contract, May 27, 1937. Amount of contract, $4,995. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters	$0 60	8	44
Cement finishers	0 55	8	44
Cement gun operator	0 75	8	44
Cement gun nozzleman	0 85	8	44
Cement gun ass't nozzleman	0 50	8	44
Cement and concrete mixer operator—			
Steam	0 60	8	44
Gas. or elec	0 50	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
M.T. driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
Plumbers and steamfitters	0 65	8	44
Rodmen, reinforcing steel	0 50	8	44
Electricians	0 65	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 65	8	44
Driver	0 40	8	44
Watchman	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instances where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Contracts in Group "B" (Manufacture and Repair of Equipment and Supplies)

The following is a statement of contracts awarded by the Department of National Defence during the month of May, 1937, for the manufacture and repair of various classes of equipment and supplies, which contracts included in all cases the "B" labour conditions above referred to:—

Nature of contract	Contractor
Seamen's blankets	Bates & Innes, Carleton Place, Ont.
G. S. blankets	Bates & Innes, Carleton Place, Ont.
Drill trousers	S. S. Holden Ltd., Ottawa, Ont.
Boots	St. Arnaud Biron & Cie Ltd., St. Genevieve de Batiscan, P.Q.
Field Hospital marquee tents	Woods Mfg. Co., Ottawa, Ont.
Socks	Mercury Mills Ltd., Hamilton, Ont.
Blankets	West Coast Woollen Mills Ltd., Vancouver, B.C.
Uniform caps	Uniform Cap Co., Ottawa, Ont.
Oilskin coats	J. F. Creaser Co., Ltd., LaHave, N.S.
Field officers' tents with flys	S. S. Holden Ltd., Ottawa, Ont.
Marquee tents	J. J. Turner & Sons, Ltd., Peterborough, Ont.
Tool boxes	Geo. W. Reed Co., Ltd., Montreal, P.Q.
Aeroplane engines and tool kits	Armstrong Siddeley Motors Ltd., Ottawa, Ont.
Fuse plugs	R. E. Bourassa, Ltd., Montreal, P.Q.
Overhaul of Jaguar Mark VIB aeroplane engine	Armstrong Siddeley Motors Ltd., Ottawa, Ont.
Overhaul of Jaguar engine Mark IV	Armstrong Siddeley Motors Ltd., Ottawa, Ont.
Steel shell containers, exploder	R. E. Bourassa, Ltd., Montreal, P.Q.

POST OFFICE DEPARTMENT

Contracts in Group "B" (Manufacture of Equipment, Supplies, etc.)

The following is a statement of contracts awarded by the Post Office Department during the month of May, 1937, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Nature of contract	Contractor
Metal dating stamps and type, brass crown seals, cancellers, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Rubber stamps, daters, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Letter carriers' uniforms	Pollack & Dorfman, Quebec P.Q.
Letter carriers' uniforms	Uniform Cap Co., Ottawa, Ottawa, Ont.
Letter carriers' uniforms	Canadian General Rubber Co., Galt, Ont.
Letter carriers' uniforms	Miner Rubber Co., Ltd., Granby, P.Q.
Letter carriers' uniforms	London Shirt Corporation, Montreal, P.Q.
Letter carriers' uniforms	Kaufman Rubber Co., Ltd., Kitchener, Ont.
Stamping machines, etc.	Machine Works, Ltd., Ottawa, Ont.
Scales	Gurney Scale Co., Ltd., Hamilton, Ont.
Scales	Pritchard-Andrews Co., Ltd., Ottawa, Ont.

PUBLIC WORKS DEPARTMENT

Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Construction of improvements to wharf at Summerside, P.E.I. Name of contractors, North Shore Construction Co., Ltd., Quebec, P.Q. Date of contract, May 10, 1937. Amount of contract, approximately $22,829.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Bricklayers	$0 70	8	44
Bricklayers' helpers (tempering and mixing mortar)	0 35	8	44

DEPARTMENT OF TRANSPORT

Contract in Group "A" (Construction, Remodelling, Repair, etc.)

Erection of a radio beacon building at Princeton, B.C. Name of contractor, Mr. S. R. Gibson, Princeton, B.C. Date of contract, May 7, 1937. Amount of contract, $2,780. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Labourers	$0 40	8	44
Carpenters	0 70	8	44
Bricklayers	0 90	8	44
Plumbers and steamfitters	0 80	8	44
Electricians	0 75	8	44
Driver and team	0 75	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

FAIR WAGE SCHEDULE FOR PUBLIC AND CERTAIN PRIVATE CONSTRUCTION WORKS IN MANITOBA

UNDER the authority of section 11 of the Fair Wage Act of Manitoba, 1916 (Consolidated Amendments, 1924, chapter 99—as amended, 1934, chapter 13, and 1935, chapter 17) the provincial Minister of Public Works has approved a schedule effective June 15, 1936, establishing the minimum rate per hour and the maximum working hours applicable on public works for building construction under contract and on private works as described in the Act.

"Private Works," as defined by the Act "means the building, construction, remodelling, demolition, or the repairing at a cost of all work done irrespective of the number of contracts made exceeding one hundred dollars, of any building or construction work within the Greater Winnipeg Water District or any city or town which has a population exceeding two thousand, or any other portion of the Province to which the provisions of this Act are extended by the Lieutenant-Governor in Council, but shall not include work which is done on property by or under the immediate direction and control of the owner, tenant or occupant thereof if no more than three men are employed in addition to the regular maintenance staff, if any, and if such work be not undertaken with a view to sale or rental of the property and shall not include work which is done by a maintenance man, or men, employed by the month."

The public work to which this schedule applies is that authorized by the Minister for the execution of which a contract has, or contracts have been entered into between the Minister and an employer, consisting of construction, remodelling, demolition or the repairing or painting of buildings in Manitoba, and, or, highway, road, bridge or drainage construction work, when a contract has been entered into, and when done outside the "Greater Winnipeg Water District Area."

Fair Wage Schedule

The following schedule shall apply from and after June 1, 1937, on "Public Works" and on "Private Work."

Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week
	Minimum rates per hour		
	$	$	
Asbestos workers—			
(a) Journeymen	·75	·75	44
(b) Improvers	·60	·60	44
Asphalters—			
(a) Finishers and rakers	·54·4	·52½	44
Blacksmiths	·65	·60	44
Bricklayers	1·05	·90	44
Helpers—			
(a) Continuously employed at mixing and tempering mortar	·50	42½	48
(b) Attending on or at scaffold	·45	·37½	48
Bridge and Structural Steel and iron workers	·85	·85	44
Carpenters	·80	·70	44
Cement finishers (in warehouse or large floor area jobs)	·60	·55	48
Electrical workers (inside wiremen, licensed journeymen)	·85	·75	44
Apprentices indentured for a four-year period shall be paid in accordance with the following classification—			
First year	·25	Nil	44
Second year	·30	Nil	44
Third year	·40	Nil	44
Fourth year	·75	Nil	44
Labourers—			
(a) Skilled	·45	·37½	48
(b) Unskilled	·40	·32½	48
Lathers (Metal, Wood)—			
(a) Metal lathers	·75	·70	44
(b) Wood lathers	·70	·65	44
(Wood lathers—work may be paid for on a square yard basis at not less than ·06c. per square yard.)			
Linoleum floor layers	·60	·55	48
Marble setters	1·00	·90	44
(a) Helpers (all men assigned to help tradesmen)	·50	·42½	48
Mastic floor spreaders and layers	·85	·85	48
Mastic floor rubbers and finishers	·55	·55	48
Mastic floor kettlemen	·45	·45	48
Mosaic and tile setters	1·00	·90	44
(a) Helpers (all men assigned to help tradesmen)	·50	·42½	48
Operating engineers and firemen on construction—			
Class A—Engineers in charge of hoisting engines of three drums or more operating any type of machine, or operating trenching machines, clamshells or orange peels, regardless of capacity; or operating steam shovels or draglines of one yard capacity or over; or operating drop hammer pile drivers; in all cases irrespective of motive power	·90	·75	48
Class B—Engineers in charge of hoisting engines having only two drums or of single drum if used on a building of three stories and over, used in handling building material; or steam shovels and draglines not specified in "A" hereof; irrespective of motive power	·85	·70	48
Class C—Engineers in charge of any steam operated machine not specified in "A" or "B" hereof; or in charge of a steam boiler if the operation of same necessitates a licensed engineer under the provisions of "The Steam Boiler Act"; or air compressor delivering air for the operation of rivetting guns on steel erection work, or pumps in caissons, or concrete mixers of over ¾ yard capacity; irrespective of motive power	·80	·65	48
Class D—Operators of gas or electric engines for machines not otherwise specified in "A", "B" or "C" hereof, or men firing boilers of machines classified in "A", "B" or "C" hereof or assisting engineers in charge of same	·50	·45	48
Painters, decorators, paperhangers and glaziers	·70	·65	44
Plasterers	1·05	·90	44
(a) Helpers (continuously employed at mixing and tempering material including the making of putty and operation of machinery)	·50	·42½	48
Plumbers	·95	·80	44
(a) Helpers (all men assigned to help tradesmen)	·50	·42½	48
Reinforcing steel rodmen; when specially hired for, or when exclusively occupied on such work for a longer period than 16 consecutive hours on the work of bending, placing, tying and similar skilled work in connection with reinforcing steel work	·50	Nil	44
Roofers (felt and gravel)—			
(a) Man in charge	·60	·55	48
(b) Roofers	·45	·37½	48
Sheet metal workers	·70	·65	44
Steamfitters	·95	·80	44
(a) Helpers (all men assigned to help tradesmen)	·50	·42½	48
Stonecutters	·90	·80	44
Stonemasons	1·05	·90	44
(a) Helpers—			
(1) Continuously employed at mixing and tempering mortar	·50	·42½	48
(2) Attending on or at scaffold	·45	·37½	48
Teamsters	·40	Nil	54
(a) Teamsters with teams (if employed on the construction or demolition of the building by the owner, contractor or sub-contractor)	·80	Nil	54
Terrazo workers—			
(a) Layers	·70	·67½	44
(b) Machine rubbers (while so engaged only)	·50	·47½	48
(c) Helpers (all men assigned to the trade other than the above)	·45	·37½	48
Timber men and crib men working on grain elevators or bridges doing the "crib work" on grain elevators or rough timber work on bridges (such men shall be restricted to the use of hammers, saws, axes and augers)	·60	·50	.....

Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week
	Minimum rates per hour		
	$	$	
Truck drivers	·40	·40	48
(a) Combined rate truck and driver—			
One ton rated capacity	1·25	1·25	48
One ton rated to two ton rated capacity	1·40	1·25	48
Over two ton rated capacity to three ton rated capacity	1·90	1·75	48
Over three ton rated capacity to four ton rated capacity	2·40	2·25	48

RULE—All men hired in Winnipeg to go into the country to work on buildings shall be paid the City schedule rate, excepting where other definite agreements are made.

Attention is called to the fact that Winnipeg contractors have agreed with tradesmen that 40 hours per week only shall be worked during the months of July and August, 1937.

PUBLIC ROAD AND BRIDGE WORKS

The following schedule shall apply from and after June 1, 1937, on "public works" outside the Greater Winnipeg Water District Area in all parts of Manitoba for highway, road, bridge or drainage construction work where a contract has been entered into by the Honourable Minister of Public Works.

Occupation	Minimum rate per hour	Maximum hours per week
	$	
Labourers	·30	48
Teamsters	·30	48
Teamster and two horse team	·55	48
Teamster and four horse team	·80	48
Grader and tractor operators (excepting permanent municipal employees)	·60	48
Truck drivers (regardless of basis for payment for truck)	·40	48
Combined rate—truck and driver when paid by the hour—1 ton rated capacity	1·25	48
Over 1 ton to 2 tons	1·35	48
Over 2 tons to 3 tons	1·75	48
Over 3 tons to 4 tons	2·25	48
Combined rate—truck and driver when paid at a rate per yard mile— If a rate per yard mile is the basis for payment a minimum rate shall be fixed by the Chief Engineer of the Public Works Department for each contract, which rate shall be based on the Departmental Schedule set out in Graph herein (Graph is published with schedule and is available at Department).		
Timber men—timber work where use of hammers, saws, axes and augers only are required	·50	48

NOTE—Men occupied on subsistance work projects such as Forestry work, The Pas-Mafeking Highway, Grassmere Drain and similar undertakings—not less than the minimum wage rate set by the Minimum Wage Board.

Nova Scotia Limitation of Hours of Labour Act Proclaimed

A review of the provisions of the Nova Scotia Limitation of Hours of Labour Act was made in the LABOUR GAZETTE of September, 1935, page 831. It was then provided that the Act should come into force "on proclamation."

The Nova Scotia *Royal Gazette* of May 26, 1937, contains a notice proclaiming that the Act shall come into force on, from and after June 1, 1937.

Hon. Dr. J. A. Faulkner, Ontario Minister of Health, speaking recently at the annual meeting of the Toronto-York Division of the Ontario Industrial Accidents Prevention Associations stated that consideration was being given to the proposed adoption of legislation to check silicosis and to place workers handling radium under the jurisdiction of the Workmen's Compensation Board.

At a meeting of the Vancouver Domestic Workers' Union No. 91, held on May 13, it was decided to request that the union be brought under the scope of the Minimum Wage Act, and that the union present a new wage scale to the Provincial Government.

The March 1937 number of the Bibliography of Industrial Hygiene (Vol. XI, No. 1) has just been published by the International Labour Office. It contains a list of books, articles, etc., which appeared in different countries during 1936 and 1937 on the following subjects: industrial medicine; physiology; physiology of the special system; industrial pathology; pathology (causes of injury); pathology of the special system; medicine of accidents; social medicine and hygiene.

At the closing session of the National Council of Canadian Universities, the co-operation of all Canadian Universities in the work of the Workers' Educational Association was pledged. The Secretary of the Association, Prof. Drummond Wren, in an address, stated that labour demands an understanding of its problems by university faculties and instruction in subjects of interest to workingmen. These should include the history of labour movements, economic problems, elementary psychology, history, and public speaking, he stated.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Iron, Steel and Products

St. John, N.B.—A Certain Brass and Iron Foundry and Their Employees.

Agreement reached following strike reported on page 616 of this issue.

Agreement to be in effect from May 14, 1937, to December 31, 1937, and thereafter until either party gives notice of change.

Hours: 50 per week, 9 per day, 5 on Saturdays, or at the option of the Company, 10 per day for five days.

Overtime: except for regular maintenance and repair work, overtime to be paid at time and a quarter until midnight and time and a half for overtime from midnight to 7 a.m.

Wages: For many classes of work, both time work and piece work, a 10 per cent increase is granted. The minimum for male workers 21 years and over in most departments is 30 cents, but those already getting 30 cents or over are in most cases granted an increase of 10 per cent, or in some departments of 5 cents per hour. (In the polishing and plating department, however, for the present staff of male employees the minimum is 25 cents.) The minimum rates for male employees under 21 years are from 20 cents per hour for first year employed to 25 cents during third year. The minimum rates for girls (core department and polishing and plating) is from 18 cents during first year to 25 cents during fourth year. Minimum rate for machine moulders is 37 cents; for floor moulders or other moulders already receiving 40 cents or over an increase of 10 per cent is granted.

Construction: Shipbuilding

Vancouver, B.C.—Certain Dry Dock and Shipbuilding Firms and the Boilermakers and Iron Shipbuilders' Union of Canada, Local No. 1.

The agreement which came into effect June 12, 1935, and was summarized in the Labour Gazette October, 1935, page 951, is still in effect with a new wage scale from May 7, 1937:

Wages per hour: anglesmiths, boilermakers, chippers and caulkers, shipfitters, drillers and tappers 90 cents (an increase of 7 cents); acetylene burners and welders 82 cents (an increase of 6 cents); punch and shearman, holders-on 76 cents (an increase of 6 cents); drilling out rivets 75 cents (an increase of 5 cents); reamers and countersinkers 70 cents (an increase of 5 cents); rivet heaters 68 cents (an increase of 5 cents); ironworkers' helpers 67 cents (an increase of 5 cents); passer boys under 21 years 45 cents (an increase of 3 cents).

Construction: Buildings and Structures

Kingston, Ontario.—Certain Contractors and the United Brotherhood of Carpenters and Joiners, Local No. 249.

Agreement to be in effect from May 1, 1937, to March 31, 1938, and thereafter from year to year until notice.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: if required in connection with the pouring of concrete on Saturday afternoon, time and a half to be paid. Work on Sundays and six specified holidays, double time. For other overtime, the rate is to be mutually agreed upon.

Wages for journeymen carpenters: 80 cents per hour (an increase of 5 cents per hour).

Wages for apprentices to be as stipulated by the Ontario Apprenticeship Board.

A joint arbitration committee to be appointed and disputes to be referred to it. No stoppage of work to occur until a dispute has been referred to the committee.

Construction: Miscellaneous

Vancouver, B.C.—Schedule of Wages and Trade Rules for the United Brotherhood of Carpenters and Joiners of America, Local 2404 (Pile Drivers, Bridge, Dock and Wharf Builders Union).

This schedule effective from April 1, 1937, has been agreed to by the Pile Driving Section of the General Contractors' Association.

Only union members to be employed. Foremen also must be union members.

Hours: 8 per day, 5 days per week, a 40 hour week. In case of shift work, 7½ hours to be a shift but with 8 hours' pay.

Overtime: time and one-half for first two hours, double time thereafter. If called back to work in the same 24 hours, double time to be paid for the second shift. Work on statutory holidays, double time.

Wages for pile drivers: foreman $1.25 per hour: crew, bridgemen and wharf carpenters $1 per hour.

For jobs outside the city lasting one month or less, transportation and travelling time to be paid by employer.

Transportation and Public Utilities: Local Transportation

Vancouver, B.C.—Certain Transfer and Storage Firms and the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local No. 31.

Agreement to be in effect from June 15, 1937, to June 15, 1938, and thereafter from year to year until notice. If the parties are unable to agree on any amendment, it is agreed that application shall be made under the Industrial Disputes Act for a Board of Arbitration whose majority decision will be accepted as final and binding.

39726—7½

All employees must become and remain members of the union. Union members to be employed if available. They must sign for a copy of the agreement and so authorize the Company to deduct and pay to the union any dues, fines, assessments, etc., levied by the union.

Hours: standard working time to be 50 hours per week.

Overtime: if neessary to exceed 50 hours in any week, the excess time will be allowed off as soon as possible. Work on Sundays and holidays, time and one half.

Minimum wages: motorcycle operators $3 per day, operators of trucks 2,000 pounds and under (factory rating) 45 cents per hour, of trucks over 2,000 pounds, 50 cents, swampers (steady) 45 cents, swampers (casual, non union men), 40 cents.

Seniority to prevail in laying off and rehiring men. Those working on motorcycles to be promoted to a truck when a vacancy occurs.

No strikes or lockouts to occur, and disputes which cannot be adjusted between the two parties will be submitted to arbitration.

Transportation and Public Utilities: Street and Electric Railways

VANCOUVER, B.C.—BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY LIMITED AND TH5 AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA.

Agreement to be in effect from March 1, 1937, to March 1, 1940, and thereafter, subject to 60 days' notice.

The agreement which came into effect January 15, 1935, and which was summarized in the LABOUR GAZETTE April, 1935, page 375, February, 1934, page 194, and August, 1928, page 905, is renewed with these exceptions:

For the first two years of this agreement, or until March 1, 1939, all men paid at hourly rates and having one year's service or more before March 1, of any year, will receive one week's holiday with pay before March 1, of the next year; for the third year of this agreement, ten days' holidays. Wages of monthly men already receiving holidays will be increased $2.50 per month for the first two years or $3.75 per month for the third year of this agreement.

Motorbus operators on certain lines formerly paid 64 cents per hour are increased to 69 cents, with time and one quarter for Sunday work, time and one half for all work on holidays and for all time in excess of 8 hours and 20 minutes for regular men, and over 8 hours and 30 minutes for extra men. The conditions will apply also to new lines which may be established in Vancouver or New Westminster, operating under the same conditions as these lines. They will also apply to bus operators in New Westminster if and when such bus operations are substituted for the existing street railway service.

Except during such periods as Christmas week and Exhibition week, all men on the passenger service of interurban lines will be allowed five days off per month, of which two must be taken in one half of the month and three in the other.

Transportation and Public Utilities: Water Transportation

SOREL, QUEBEC.—CERTAIN STEVEDORING COMPANIES AND THE NATIONAL CATHOLIC UNION OF LONGSHOREWEN OF SOREL, INCORPORATED.

The agreement covers the loading and unloading of all ships (including the handling of grain) engaged in ocean, inland and coastal navigation.

Agreement to be in effect from April 30, 1937, to January 31, 1938, and thereafter from year to year subject to 30 days' notice before January 31 of any year.

Only union members to be employed as longshoremen if competent members available.

Longshoremen reporting for work at 7 a.m., 1 p.m. and 7 p.m., will wait for orders for half an hour and are not paid for such period. If called at other hours or on Sundays or holidays, at least one hour's time to be paid. No work on Sundays or holidays except in case of necessity.

Wages: for loading grain, 50 cents per hour between 7 a.m. and 6 p.m., 60 cents between 7 p.m. and midnight, and 70 cents between midnight and 6 a.m.; for unloading of grain out of lake and ocean steamers into the elevators, 45 cents between 7 a.m. and 6 p.m., 48 cents between 7 p.m. and midnight and 55 cents between midnight and 6 a.m. For handling dynamite 60 cents straight per hour. For handling of nitrate of soda, china clay, coal, potash, fertilizer, iron ore, paper pulp, wood pulp, square timber, oil in drum barrels, molasses, sulphur, shifting bunker coal and any other general cargo, 50 cents straight per hour. Foremen are to be paid 10 cents per hour over the regular longshoremen's rate.

Time and a half to be paid for work on Sundays and three specified holidays, and for work during meal hours unless the loading or unloading of a vessel can be finished in one working hour, in which case regular rate for meal hour to be paid. If required to work more than one hour beyond the usual meal hour, they will be paid for such extra time so employed at time and one-half.

At least four men and a foreman shall be used for mooring ocean vessels or for discharging grain from ocean vessels. Sixteen men to constitute a regular gang for trimming and bagging when loading grain cargoes, except when running grain only when two men per pipe shall be used. Other safety regulations are specified.

Any disputes as to the interpretation of this agreement which cannot be settled by the representative of the longshoremen and the employer will be referred to an arbitration committee consisting of one representative of each party and a third jointly selected or named by the Minister of Labour. The decision of this committee will be final and binding.

MONTREAL, QUEBEC—CERTAIN STEAMSHIP COMPANIES AND THE CHECKERS AND COOPERS EMPLOYED BY THEM.

Agreement to be in effect from May 14, 1937 to December 31, 1937, and thereafter from year to year subject to 30 days' notice before December 31, of any year.

The agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1936, page 749, and November, 1934, page 1062, with the following changes:

Wages per hour: checkers 54 cents for day work and 64 cents for night work; coopers 53 cents for day work and 63 cents for night work. (This is an increase of 4 cents per hour in each case.) Checkers employed in office work or on stowage or as warehousemen to be paid 5 cents per hour extra.

When work on a ship has to be discontinued because of adverse weather conditions, em-

ployees to be paid for one hour at the prevailing rate in addition to the hour or hours already worked.

An employee who considers himself unfairly treated may submit his case to his employer and afterwards through the checkers' committee to the Shipping Federation.

MONTREAL, QUEBEC—NATIONAL HARBOURS BOARD, MONTREAL HARBOUR, AND THE INDEPENDENT ASSOCIATION OF HARBOUR EMPLOYEES OF THE PORT OF MONTREAL.

Agreement to be in effect from May 1, 1937, to April 30, 1938.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1936, page 659 and June, 1935, page 584, with these exceptions:

Wages: for those classes of work formerly paid at 55 cents per hour or over, an increase of 3 cents per hour; for those formerly paid less than 55 cents, an increase of 2 cents per hour, except patrol lineman in electrical branch for whom the increase is 8 cents per hour; foreman vessel shoveller for whom the increase is 4 cents; gallery loader foreman, engineer of dredge crew and foreman millwright for whom the increase is 4 cents and water boy an increase of one cent; foreman plumber an increase of $2.25 per week, subforeman in cold storage warehouse an increase of $3.65 per week, temperature man (shift man) also in cold storage warehouse, now 56 cents per hour (formerly $37.80 per week). For those classes of work paid by the month: those receiving $180.50, an increase of $9.50; those receiving $169 to $175, an increase of $9; those receiving $147.50, an increase of $7.50; those receiving $135, an increase of $7; those receiving $125.50 and $132.50, an increase of $6.50; those receiving $120, an increase of $6; those receiving $76, an increase of $4; those receiving $66.50 and $75.50, an increase of $3.50; those receiving $60 to $65, an increase of $3; those receiving $47.50 to $52.50, an increase of $2.50; those receiving $42, an increase of $2.

The provisions that grain boat shovellers (unloading) be paid 5 cents per hour extra after 6 p.m. and that grain boat shovellers working Sundays and holidays be paid double time is omitted. It is now provided that all hourly paid men except on shift work shall be paid time and one-half after 6 p.m. on recognized working days and time and one-half for all work on Sundays and holidays. All shift work to be so classified must be continuous except for meal hours for a period of at least 24 hours, and will be paid at regular hourly rates.

Service: Recreational

HALIFAX, N.S.—CERTAIN MOTION PICTURE THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL NO. 680.

Agreement in effect from September 1, 1935, to August 31, 1937.

Only union members to be employed.

Hours: 7 per day.

Overtime: After 11.15 p.m., $1.50 per hour, Sundays $3 per hour.

Wages for projectionists vary in the different theatres from $23 to $46 per week, maintenance man $30.

HAMILTON, ONT.—CERTAIN MOTION PICTURE THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL NO. 303.

Agreement to be in effect from September 1, 1936, to August 31, 1937.

Only union members to be employed.

Wages: at one theatre $36 per week, with $2 per hour for overtime and $3 per hour on Sundays; at three other theatres $45 for some and $40 for other projectionists, with same rates for overtime and Sunday as above.

In four theatres, one week's holidays with pay to be given each year, after one year's service.

ST. CATHARINES, WELLAND AND NIAGARA FALLS, ONTARIO.—CERTAIN MOTION PICTURE THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS' LOCAL NO. 461.

Agreement to be in effect from September 25, 1935, to September 1, 1937.

Hours: 7 per day.

Wages per week for projectionists: St. Catharines, $32.50 and $47.70; Welland and Niagara Falls, $40.

FORT WILLIAM AND PORT ARTHUR, ONTARIO.—CERTAIN MOTION PICTURE THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL NO. 467.

Agreement to be in effect from September 1, 1935, to August 31, 1937.

Overtime: $1 per hour in one theatre, $1.35 in others.

Wages for projectionists: $35 and $45 for a 40½ hour week and $37, $47 and $49.50 for a 45½ hour week; maintenance men $32 for a 48 hour week.

MOOSE JAW, SASK.—A. CERTAIN MOVING PICTURE THEATRE AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL NO. 406.

Agreement to be in effect from September 1, 1935, to September 1, 1937.

Only union members to be employed.

Wages: $120 per week to be divided among three projectionists; for maintenance men $20 per 48 hour week.

Overtime for projectionists: $1 per hour, shows on Sunday, $5 per performance.

CALGARY, LETHBRIDGE, MEDICINE HAT AND DRUMHELLER, ALBERTA.—CERTAIN MOVING PICTURE THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL NO. 302.

Agreement to be in effect from September 1, 1936, to September 1, 1937.

Only union members to be employed.

Overtime to be paid *pro rata*, Sunday overtime, double time.

Wages for projectionists: in four theatres in Calgary, $42.50 per week of 36 hours, in another $30 per week of 36 hours; in four other theatres in Calgary $25 per week of 38 hours; in one theatre in Lethbridge $35 per week of 40 hours, in another Lethbridge theatre $45 per week of 40 hours; in one theatre in Medicine Hat $40 per week of 40 hours; in one theatre in Drumheller, $32.50 per week of 32 hours.

Quebec Collective Labour Agreements Extension Act

The following agreements and amendments have recently been made obligatory by Orders in Council and are noted in the next article of this issue:—

Building Trades, Quebec
Building Trades, Montreal
Building Trades, St. Hyacinthe
Granite Cutters, Province of Quebec
Glove Makers (fine gloves) Province of Quebec
Longshoremen (Coastal and Inland Navigation) Montreal
Building Trades, Montreal (Amendment)
Plumbers, Hull (Amendment)
Building Trades, Hull (Amendment)
Millinery Workers, Montreal (Amendment)
Barbers and Hairdressers, Portneuf (Amendment)
Barbers and Hairdressers, Hull (Amendment)

Industrial Standards Act of Ontario

The following schedules have been made binding by Orders in Council and are summarized on page 696:—

Logging Industry, Port Arthur Forestry Division
Bricklayers and Stonemasons, Windsor
Carpenters, Windsor

Industrial Standards Act of Alberta

The following schedules have been made binding by Orders in Council and are summarized on page 697:—

Bakery Industry, Edmonton
Plumbers, Calgary

COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC
Agreements Recently Made Obligatory

Recent proceedings under the Collective Labour Agreements Extension Act include the extension by Orders in Council of agreements affecting building trades at Quebec, Montreal and St. Hyacinthe, granite cutters throughout the Province, glove cutters (fine gloves) throughout the Province and longshoremen (inland or coastal navigation) at Montreal. Amendments to previous Order in Council have also been made effective and include millinery workers at Montreal, building trades at Hull, plumbers at Hull, barbers at Portneuf and Hull. These are all noted below.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the LABOUR GAZETTE, May, 1934, page 417, and amendments to the Act were summarized in the issues of June, 1935, page 526, July, 1936, page 607, and December, page 1127. Under this Act, applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and on the other hand employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette,* and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the LABOUR GAZETTE beginning in the issue of June, 1934. Beginning with the issue of the LABOUR GAZETTE for July 1935, the terms of agreements have been summarized instead of being printed in full.

This Statute has been replaced by a similar statute entitled an Act Respecting Workmen's Wages, as noted on page 597. The new Act came into effect May 27. The agreements noted below are, therefore, the last to be made effective under the Collective Labour Agreements Extension Act.

BUILDING TRADES, QUEBEC.—An Order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, makes obligatory on all employers and employees in the industry, throughout the district, the terms of an agreement between l'Association des Constructeurs de Québec Inc. (The Builders Association of Quebec, Incorporated) and le Conseil des Métiers de la Construction des Syndicats Catholiques de Québec, Inc. (The Building Trades Council of the Catholic

Unions of Quebec, Incorporated) representing each of its affiliated unions except the plumbers', electricians' and tinsmith-roofers' unions.

The Order in Council is in effect from May 22, 1937 to May 21, 1938 and thereafter from year to year, subject to notice. The provisions are, however, retroactive to May 10, 1937.

The territorial jurisdiction includes the judicial district of Quebec and the counties of Beauce, Dorchester, Megantic, Bellechasse, Montmagny, l'Islet, Kamouraska and Temiscouata.

The terms are similar to those in effect under previous orders in Council and summarized in the LABOUR GAZETTE June, 1936, page 544, July page 660 and September page 834, with the following exceptions:

Hours: 8 per day, 48 per week.

Wages: In the cities of Quebec and Levis and within 10 miles of their limits, wages for all classes of workers in the schedule of wages of the 1936 Orders in Council are increased 5 cents per hour. The following classes are added in the schedule: bricklayers, masons, and plasterers who are contractors must be paid $1 per hour for personal services: carpenters, joiners, joint pointers and cement finishers who are contractors must be paid 75 cents per hour for personal services and painter contractors 70 cents; journeymen plumbers, steamfitters and electricians are now included at a wage of 50 cents per hour.

In Thetford Mines, wage rates for mortar makers, celanite mixers, plaster pourers, hod carriers and common labourers are increased 5 cents per hour. In Thetford Mines and in the rest of the district, except the city of Quebec and Levis, the wage rate for plumbers and electricians is 40 cents. Wages for maintenance men are increased $2 per week.

BUILDING TRADES, MONTREAL.—An Order in Council approved May 19, and published in the *Quebec Official Gazette,* May 22, makes obligatory on all employers and employees in the industry throughout the district the terms of an agreement between the Montreal Builders Exchange, Incorporated, the Master Plumbers Association of Montreal and vicinity, the Master Plumbers Section of the Retail Merchants' Association of Canada, Incorporated, and le Conseil des Syndicats des Métiers de la Construction de Montréal (the Council of Building Trades Unions of Montreal) and le Conseil des Métiers de la Construction de Montréal et la Banlieue (the Building Trades Council of Montreal and vicinity).

The terms of the Order in Council are in effect from May 1, 1937 to March 31, 1938, and for 30 days thereafter pending the adoption of an Order in Council to replace this one.

The territorial jurisdiction for all trades except structural steel and sprinkler fitting includes the Island of Montreal and Ile Bizard and the counties of Assumption, Terrebonne, Laval, Deux Montagnes, Argenteuil, Vaudreuil, Soulanges, Beauharnois, Chateauguay, Laprairie, Chambly, Verchères, Saint John and Iberville. The territorial jurisdiction for the structural steel industry and sprinkler fitting includes the whole province of Quebec except the counties of Sherbrooke, Richmond, Wolfe, Stanstead Compton, Frontenac, Shefford, Brome and Missisquoi.

Hours: 8 per day, between 8 a.m. and 5 p.m., 4 on Saturday, between 8 a.m. and noon, a 44 hour week for all except common labourers who may work 8 hours, 6 days per week, a 48 hour week.

Shift work is not subject to the specified hours of starting or stopping but the weekly maximum hours are the same. On all urgent or special work, which cannot be done between the regular hours, the joint committee may permit work to be done at other periods of the day, at regular rates of pay. Plumbers, steamfitters and pipe mechanics cannot be so exempted.

Overtime: time and one-half. Work on Sundays and seven specified holidays, double time. In the case of the structural steel industry, no work on Sundays or holidays except where property is in jeopardy. Elevator mechanics to be paid double time for all work after 5 p.m. on any day as well as all work on Saturday afternoon, Sundays and five specified holidays.

All piece work contracts between an employer and one or more employees are invalid.

Steel erection work includes all steel fabrication work done in the field and the installation of tanks, boilers, etc.

Minimum hourly wage rates for the Island of Montreal and in the rest of the territorial jurisdiction on building operations of $20,000 or more: bricklayers, stonemasons (including cutters on the job), plasterers, and marble setters, 80 cents (increases of 10 cents over last year's rates); electricians, metal lathers, plumbers, steamfitters and pipe fitters, 75 cents (increase of 10 cents); structural iron workers, 75 cents (formerly 50, 60 and 65 cents for separate classes); sprinkler fitters, 75 cents (no change from previous rate); carpenters and joiners, carpenters on concrete forms at shop or job, erectors of windows, sash, screens, (wood or metal) and steel partitions, erectors of weather strips, 70 cents (an increase of 10 cents per hour); tile setters, 70 cents (an increase of 5 cents); painters, paperhangers, and glaziers and ornamental iron workers, 66 cents (an increase of 6 cents); roofers (slate and tile) and sheet metal workers (erectors) 65 cents (increase of 5 cents); mastic floor layers, 65 cents; asbestos coverers, 60 cents (no change); enginemen (hoisting) and terrazzo layers, 60 cents (increases of 5 cents); fifth year junior mechanics in the plumbing, steamfitting and pipefitting trade, 60 cents; cement finishers, 55 cents (an increase of 5 cents); wood lathers, 55 cents (no change); enginemen (steam mixer) and mastic floor kettlemen 55 cents; enginemen (gas mixer), enginemen (compressor), firemen (construction), roofers (composition) 50 cents (increases of 5 cents); mastic floor finishers, 50 cents; hod carriers, 45 cents (an increase of 5 cents); building caulkers, 45 cents (no change); common labourers, 40 cents (an increase of 5 cents).

Wages in the territorial jurisdiction outside the Island of Montreal, on all building operations of less than $20,000 are subject to a reduction of 20 per cent from the above scale. Sprinkler fitters ordinarily resident in the city of Montreal shall be paid 20 cents per hour in addition to the regular wage rate of 75 cents when required to work outside the Island of Montreal.

Contractors who do not employ skilled tradesmen but who themselves do the building trades

work must be paid a wage rate at least 25 per cent higher than regular rates.

Building contracts signed before the passing of this Order in Council are exempt from it except for the provisions as to hours. Such contracts are however subject to the terms of the collective agreement in effect under this Act at the time of signing the contract.

Maintenance repair work on building done by journeymen painters, carpenters and joiners and plasterers which does not require more than one 8 hour day of work is exempted from this Order in Council.

Maintenance men are skilled tradesmen or unskilled workmen of the building trades employed throughout the year by the same employer on the upkeep of buildings, but not on any new construction or reconstruction of any building.

Maintenance men limited to 48 hours per week at regular rates. Overtime to be paid at the hourly rates in the above schedule except those earning $1,560 per year or more who will not be entitled to overtime pay for emergency calls for the protection of property.

Maintenance men employed in churches or chapels, universities, colleges, hospitals, asylums, orphanages, etc. (with the exception of cemeteries) to be paid a minimum of $22 per week for journeymen and $15.40 for labourers, on the Island of Montreal and $19.80 for journeymen, $13.20 for labourers outside the Island of Montreal.

Maintenance men employed in office or public buildings, apartment buildings or dwelling houses and in hotels, factories or manufacturing establishments and stores to be paid a minimum of $24.20 per week for journeymen, $17.60 for labourers on the Island of Montreal and $19.80 per week for journeymen and $15.40 for labourers outside the Island of Montreal.

Employers may charge for rent a maximum of $3 per month per room to maintenance employees living in the establishment and 25 cents per meal for employees boarding therein.

This Order in Council will cease to apply to maintenance men in public buildings and manufacturing establishments whenever an Order governing such establishments or buildings comes into force and fixes minimum wages for maintenance men.

The provisions of this Order in Council which govern apprenticeship are the same as those which came into effect February 27, 1937, and which were summarized in the LABOUR GAZETTE, March, 1937, page 362, with the exception that apprentice plumbers, steamfitters and sprinkler fitters are paid 35 cents per hour in the third year of their apprenticeship.

BUILDING TRADES, ST. HYACINTHE.—An Order in Council approved May 19 and published in the *Quebec Official Gazette* May 22, makes obligatory on all employers and employees in the industry and district an agreement between certain contractors and Le Syndicat National Catholique des Métiers de la Construction de Saint-Hyacinthe (The National Catholic Union of Building Trades of St. Hyacinthe).

The Order in Council is in effect from May 22, 1937, to May 21, 1938, and shall renew itself unless either party gives notice of change.

The territorial jurisdiction comprises the county of St. Hyacinthe.

Hours: 8 per day, 48 per week, in conformity with the Act respecting the Limitation of Working Hours. On any work not under that Act, hours are restricted to 8 per day for qualified workmen and 9 for helpers and labourers. Plumbers and electricians may be called outside these hours for emergencies.

Minimum wages per hour: bricklayers, plasterers and masons 55 cents for journeymen and 70 cents for contractors (personal services); electricians 45 cents for journeymen and 65 cents for contractors (personal services); journeymen electricians charged with the building and maintenance of lines $160 per month or 50 cents per hour; plumbers and steamfitters, and tinsmith-roofers (composition) 40 cents for journeymen and 60 cents for contractors (personal services); painters 40 cents for journeymen and 55 cents for contractors (personal services); carpenters and joiners 40 cents for journeymen and 50 cents for contractors (personal services); cement finishers, 50 cents; lathers (wood and metal) and stationary enginemen 45 cents; marble setters, hod carriers, tile setters, terrazzo layers and ornamental iron workers (erectors) 40 cents; labourers and ornamental iron workers' helpers 35 cents. These rates are in most cases increases of from 5 to 15 cents per hour over the previous rates. Some trades, however, are unchanged.

Journeymen with lowered capacity on account of age or infirmity may be paid 5 cents per hour less than the above rates. (This does not apply to labourers). The proportion of workmen on any one work paid this lower minimum rate may not exceed one in ten qualified journeymen or fraction thereof.

Any higher rates now paid workmen may not be reduced after the enforcement of this agreement. Piece work is forbidden unless it can be proved that the minimum hourly rates are maintained. For all work done outside the place of residence of the employee, transportation and board to be paid by employer.

Apprentices must be between 16 and 30 years of age to begin their apprenticeship. Apprentices must be registered with the union or the joint committee.

Wages for apprentices in each trade mentioned in the above schedule: 15 cents per hour during first year, 20 cents during the second year and 25 cents during third year.

Contracts awarded and signed before this Order in Council went into effect are exempted.

Maintenance men shall be paid at least $18 per week for qualified workmen and $15 for labourers, for a 55 hour week. Overtime to be paid in accordance with the hourly rates in the above schedule.

The employer may charge maintenance men a maximum of $2 per month per room and 20 cents per meal.

GRANITE CUTTERS, PROVINCE OF QUEBEC.—An Order in Council approved May 19, and published in the *Quebec Official Gazette* May 22, makes obligatory on all employers and employees in the granite cutting industry, throughout the Province the terms of an agreement between certain owners and operators of granite quarries and granite cutting plants and la Fédération Nationale Catholique des Métiers du Bâtiment (The National Catholic Federation of Building Trades).

The Order in Council is in effect from May 22, 1937, to December 31, 1937.

The territorial jurisdiction includes the whole Province of Quebec.

Hours: for granite cutters, 8 per day, 5 on Saturday, a 45 hour week, blacksmiths 8 per day, 4 on Saturday, a 44 hour week in plants, and 9 per day, 5 on Saturdays, a 50 hour week in quarries; the maximum hours for the other trades mentioned in the wage schedule are 9 per day, 5 on Saturdays, a 50 hour week.

Overtime: time and one-quarter.

Wages per hour: granite cutters, 70 cents per hour in the cities of Quebec, Montreal, Three Rivers and Sherbrooke, and 60 cents in the rest of the Province. (The previous rate was 50 cents for all); chief engineer 60 cents; blacksmiths, machine polishers, surface machine operators and mechanical engineers, 50 cents; gang saw operators, hoist operators, carborundum machine operators, assistant engineer; crane operators and firemen, 45 cents; quarrymen, 40 cents (an increase of 5 cents); hand polishers (expert) after one year, 40 cents; labourers 30 cents (an increase of 5 cents).

Incapacitated workmen may be employed at lower rates as determined by the Joint Committee, but not more than one such man to ten granite cutters.

Wages for apprentice granite cutters: 20 cents per hour during first year, 25 cents during second year, 35 cents during third year and 50 cents during fourth year. Wages for apprentice polishers, first year, 25 cents.

Apprenticeship to last four years. Not more than one apprentice allowed to each 8 granite cutters.

Contracts awarded and signed before this agreement came into effect are exempted from it.

GLOVE CUTTERS (FINE GLOVES) PROVINCE OF QUEBEC.—An Order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, makes obligatory on all employers and employees in the industry the terms of an agreement between certain glove manufacturers and Le Syndicat Catholique et National des Gantiers de Montréal, Inc. (The National Catholic Union of Glove Makers of Montreal, Incorporated), le Syndicat Catholique et National des Gantiers de Trois-Rivières (the National Catholique Union of Glove Makers of Three Rivers) and le Syndicat Catholique et National des Gantiers de Loretteville (the National Catholic Union of Glove Makers of Loretteville).

The Order in Council is in effect from May 22, 1937, to December 31, 1937, and shall be renewed for a year if neither party gives notice of change 30 days before expiration. The terms are retroactive to May 11, 1937.

The territorial jurisdiction includes the whole Province of Quebec.

The agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, June, 1936, page 545, September, page 834, and December, page 1182, with this exception:—

Wage rates (piece rates) continue as in the 1936 agreement until September 30, 1937. From October 1, 1937, an increase of 10 per cent will be effective.

LONGSHOREMEN (INLAND AND COASTAL NAVIGATION), MONTREAL.—An Order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, makes obligatory on all employers and employees in the industry the terms of an agreement between certain steamship companies and l'Union des Travailleurs du Port de Montréal, Inc. (The Labourers' Union of the Port of Montreal).

The Order in Council is in effect from May 22, 1937, for the navigation season of 1937 and thereafter from year to year unless either party gives notice of change, providing the union remains in affiliation and in good standing with the National Catholic Unions of Montreal.

The jurisdiction consists of the loading and unloading of all ships (excepting the handling of grain) engaged in inland and coastal navigation in the harbour of Montreal.

For work of longshoremen, checkers and coopers between 7 a.m. and 7 p.m., 45 cents per hour (an increase of 3 cents per hour over last year's rate); between 7 p.m. and midnight, 46 cents (an increase of 1 cent); between midnight and 7 a.m., 48 cents (no change from last year's rate). Foremen must be paid 5 cents per hour extra.

If required to work through meal hour and afterwards, time and one-half to be paid for meal hour and until relieved.

Time and one-half for work on Sundays and five specified holidays.

Longshoremen reporting for duty at the three specified hours in the day will wait for orders for one-half hour each time without pay, but will be paid full time for any further waiting time.

MILLINERY WORKERS, MONTREAL.—An order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, amends the previous Orders in Council for this industry (LABOUR GAZETTE, August, 1935, page 732 and March, 1936, page 275).

The agreement as amended is in effect from April 15, 1937, to February 15, 1938, and thereafter from year to year, subject to notice. On or before January 15, 1938, the committee of each party may meet to discuss the renewal or revision of the agreement.

The following changes are made by the amendment:—

Wages remain the same as in the original agreement until July 1, 1937, with the addition of the class, draper-trimmers, at a wage of $16 per week; after July 1, 1937, wage rates are increased $1 per week.

Overtime is permitted for one hour after closing time on any Friday.

BUILDING TRADES, HULL.—An Order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, amends the previous Orders in Council for these trades (LABOUR GAZETTE, March, 1935, page 240, October, page 953, and August, 1936, page 751) as follows:—

Hours: 8 per day, 4 on Saturdays, a 44 hour week. In case of employing two or three shifts, each shift to be 7 hours.

The inspector of the Joint Committee may at any time carry on an investigation in the employer's office or on the job.

PLUMBERS, HULL.—An Order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, amends the previous Orders in Council for this trade (LABOUR

GAZETTE, April, 1936, page 371, and July, 1935, page 629) by the following change:—

Wages: journeymen plumbers 85 cents, master plumbers (personal services) $1.35, improvers 50 cents for first six months and 60 cents for second six months. (These are increases of 10 cents per hour in each case.) The wage rates for apprentices are unchanged.

BARBERS AND HAIRDRESSERS, COUNTY OF PORTNEUF.—An Order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, amends the previous Order in Council for this trade (LABOUR GAZETTE, October, 1935, page 952, and June, 1936, page 548) by increasing the price for certain jobs on Saturdays and the day before holidays.

BARBERS AND HAIRDRESSERS, HULL.—An Order in Council, approved May 19, and published in the *Quebec Official Gazette,* May 22, amends the previous Orders in Council for these trades (LABOUR GAZETTE, August, 1935, page 731) by providing that any person who carries on the trades of barber, hairdresser or female hairdresser must have obtained a certificate of competency either from the Joint Committee or from a *bona fide* labour union.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of Labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council, may declare such schedule to be in force "during pleasure" or for a period not exceeding twelve months stipulated in the schedule and thereupon such schedule shall be binding upon every employee and employer in such industry in the whole or any part of the province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette.* The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the LABOUR GAZETTE, summaries are given in this article of the schedules which have thus been approved.

LOGGING INDUSTRY, PORT ARTHUR FORESTRY DIVISION.—An Order in Council dated May 7, and published in *The Ontario Gazette* May 8, makes binding the terms of a schedule governing the logging industry including cutting pulp, peeling, skidding, river driving, tie making, loading, cutting of piling, maintenance of men in camps, cooking, etc., in the Port Arthur Forestry Division.

The Order in Council is in effect from May 8, 1937 to April 1, 1938.

The terms are similar to the schedule previously in effect and summarized in the LABOUR GAZETTE, April, 1936, page 372, with these changes:

Minimum wage rates for all monthly paid employees included in the schedule are increased $5 per month. An additional class is that of teamsters driving four or more horses with a monthly minimum of $55. The minimum rate for river drivers and men engaged in watering wood throughout the progress of the drive is increased from $2.25 to $2.60 per day (with board). Piece rates are increased, with increases varying from 12 to 17 per cent over last year's rate. The amount which may be charged piece workers for board and lodging is increased from 75 to 85 cents per day.

BRICKLAYERS AND STONEMASONS, WINDSOR.—An Order in Council dated May 8, and published in the *Ontario Gazette,* May 15, makes binding the terms of a schedule governing the bricklaying and stone-masonry industry in a zone which includes the city of Windsor and the suburban area adjacent thereto.

The schedule is in effect from May 15, 1937, to March 31, 1938.

The schedule includes bricklayers' and stonemasons' work in construction of new buildings or part of new building, structure or sewer and the repairing, alteration of the whole or any part of any existing building, structure or sewer. The schedule does not include employees of manufacturing plants while engaged in manufacturing processes nor employees of manufacturing plants or industrial establishments who are regularly engaged in work required for the repair, servicing and upkeep of the plant and equipment used in the operation of such establishment or on new installations or alterations of a minor nature.

Hours: 8 per day between 8 a.m. and 5 p.m. from Monday to Friday inclusive, a 40 hour week. Whenever work is of such a nature that

it cannot be done during the regular hours, it may be done at night, with straight time pay for 8 hours. In case of shift work, any 8 hours to be considered a day's work, but employees on night shifts to be paid 8 hours' pay for 7 hours' work or $1.31 per hour.

Overtime: no overtime permitted on shift work. All overtime work and work on Saturdays, Sundays and eight specified holidays, double time. Overtime may only be worked on permit from the advisory committee and then only in cases of necessity where life or property is jeopardized or in repairing buildings when such repair work must be done in order to prevent loss of regular employment to those regularly employed in such buildings.

Minimum wage rate for bricklayers and stonemasons: $1.15 per hour (an increase of 25 cents per hour over last year's rate); the advisory committee may fix a special minimum rate of wages for any employee who is handicapped, at the request of the employee or the employer.

Carpenters, Windsor.—An Order in Council, dated May 8, and published in *The Ontario Gazette* May 15, with correction in issue of May 22, makes binding the terms of a schedule governing the carpentry industry in a zone which includes the city of Windsor and the adjacent suburban area.

The schedule is in effect from May 15, 1937, to March 31, 1938.

The terms of this schedule are similar to those in the bricklaying and stonemasonry industry at Windsor as summarized above with these exceptions:

Work on Saturdays before noon in order to permit the pouring of concrete may be done at the regular wage rate.

Minimum wages for carpenters per hour: $1.00 (an increase of 20 cents per hour over last year's rate).

INDUSTRIAL STANDARDS ACT OF ALBERTA

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Alberta, 1935, is similar to the Industrial Standards Act of Ontario, the text of which was printed in the Labour Gazette, June, 1935, page 534, where are also noted the minor differences between the Ontario and Alberta Acts. The Act provides that the Minister of Trade and Industry for Alberta may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in any industry in any zone or zones, to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry and district. If, in the opinion of the Minister, a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation the Lieutenant Governor in Council may declare such schedule to be in force for a period not exceeding twelve months, and thereupon such schedule shall be binding upon every employee and employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after the publication of the Order in Council in the *Alberta Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Previous schedules under this Act have been summarized in the Labour Gazette, September, 1935, April, July, September, November, and December, 1936, May, 1937.

Bakers, Edmonton.—An Order in Council dated April 27, and published in *The Alberta Gazette* May 15, makes binding the terms of an agreement between the Alberta Bakers Association, Incorporated (Edmonton Branch) and The Association of Bakery Employees (Edmonton Branch), in a zone which includes the City of Edmonton and the territory within a radius of 15 miles of the Edmonton Post Office.

The terms of the schedule are similar to the previous one which was summarized in the Labour Gazette July, 1936, page 661, with these exceptions:—

Every employer to allow each of his employees a rest period of at least 24 hours in every consecutive period of 7 days.

One week's holiday with pay to each employee having one or more year's continuous service with his employer as at April 1, 1937.

The wage scale is the same as given for January 8, 1937 in the July, 1936 Labour Gazette with these exceptions:—

Wages for helpers, shippers and packers $17 per week; apprentices $8 per week for first three months, $12.50 for next nine months, $14 for second year, $16 for third year; salesmen inexperienced $16.50 per week for first three months; wrappers (hand or machine), $12.50 per week.

Plumbers, Calgary.—An Order in Council dated May 5, and published in *The Alberta Gazette*, May 15, makes binding a schedule of wages and hours of labour for employees of the plumbing and steam-fitting industry in a zone which includes the city of Calgary and surrounding district.

The schedule is in effect from May 25, 1937 to May 24, 1938.

The terms are similar to those in the previous schedule as summarized in the Labour Gazette, April, 1936, page 373.

The wage rate remains at 95 cents per hour with a 40-hour week.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

The movement in prices during the month was slight, the cost of a weekly family budget in terms of retail prices being somewhat higher owing to advances in the cost of foods and rent, while the Dominion Bureau of Statistics index number of wholesale prices was at the same level for the last week in May as at the end of April.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.58 at the beginning of May as compared with 8·54 for April; $7.82 for May, 1936; $7.52 for May, 1935; $6.67 for March, 1933 (the low point in recent years); and $11.17 in May, 1930. Fifteen items in the list of foods cost more in the month under review than in the previous month, four were lower and ten were unchanged. The most important advances were recorded in the cost of beef, mutton, pork, butter, bread and flour while the cost of eggs and potatoes again declined. The cost of fuel was lower owing mainly to a seasonal decline in the price of anthracite coal while rent averaged higher. Including the cost of fuel and rent with that of foods the total budget cost $17.28 at the beginning of May as compared with $17.18 for April; $16.36 for May, 1936; $15.97 for May, 1935; $15.41 for June, 1933 (the low point in recent years); $21.49 for May, 1930; $20.57 for May, 1922; $26.92 for July, 1920 (the post war peak); and $14.21 for May, 1914.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 changed little from week to week during the month and for the week ended May 28 was the same as for the week ended April 30, namely 85·1 as compared with 86·9 for the week ended April 2. The latest figures available on a monthly basis are for April when the index number was 86·1 as compared with 71·8 for May, 1936; 72·2 for May, 1935; 63·5 for February, 1933 (the low point in recent years); 93·4 for May, 1929; 98·5 for May, 1922; 164·3 for May, 1920; and 64·2 for May, 1914. In the classification according to chief component materials, group changes were slight, increases in the wood products group, the non-ferrous metals group, and the non-metallic minerals group, being offset by declines in the vegetables products group, the animal products group, the iron products group and the chemicals and allied products group. Canadian farm products continued the decline of the previous month until about the middle of May when some recovery occurred.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the

(Continued on Page 706)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Including lignite. i. Including conveniences. r. Mining company houses in district $5–$10 per month; others, five and six rooms, $10–$35. s. Delivered

(Continued from Page 698)

prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1937*

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18¼%; Clothing, 18¼%; Sundries, 20%.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Meat prices were considerably higher in May than in the previous month. In beef sirloin steak averaged two cents per pound higher at 26·9 cents while shoulder roast was up from 13·6 cents per pound to 14·8 cents. The prices in May 1936 were 23·2 cents and 12·9 cents per pound respectively. Mutton, leg roast, was up in the average from 23·2 cents per pound in April to 24 cents in May. The price of eggs again averaged lower in most localities decreases being greater in the western provinces than elsewhere. The Dominion average for fresh grades was down from 26·8 cents per dozen to 25·5 cents. Creamery butter averaged 30·8 cents per pound as compared with 30·5 cents in the previous month and 26·8 cents in May 1936. Higher bread prices were reported from several cities and the Dominion average was up from 6·8 cents per pound in April to 7 cents in May. Flour also was fractionally higher at 4·6 cents per pound. The price in May 1936 was 3·4 cents per pound. Potatoes were down in the average from $1.93 per ninety pounds in April to

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended May 28, 1937; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

$1.70 in May, decreases being reported from nearly all cities. Granulated sugar was again fractionally higher at 6·5 cents per pound. United States anthracite coal was down from an average price of $14.76 per ton in April to $14.38 in May.

Following are the prices for Welsh coal, "cobbles" and "French nuts": Halifax $15.50; Charlottetown $12.90; Moncton $15.50; Saint John $14; Quebec $13; Three Rivers $15 and $14; Sherbrooke $15 and $15.50; St. Hyacinthe $14; Montreal $13.50 and $13.75; Ottawa $15.25; Kingston $14.50; Belleville $15; Peterborough $15.75; Oshawa $14.50; Toronto $14 and $13.50; Galt $16; St. Thomas $16; Cobalt $18; Timmins $18; Port Arthur $17.25; Fort William $17.25; Winnipeg $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries appeared in the April issue of the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 108·9 for April, an advance of 1·5 per cent for the month. There were advances in nine of the eleven groups, decreases being reported in the miscellaneous foods and tobacco and the non-ferrous metals groups.

The *Statist* index number on the base 1867-1877=100, was 104·3 at the end of April, a decrease of 2·4 per cent for the month. Decreases were reported in vegetable foods, minerals, textiles, and sundries, the largest decrease being in the mineral group which declined 9·8 per cent.

COST OF LIVING.—The Ministry of Labour's index number on the base July, 1914=100, was 152 at the beginning of May, an increase of 0·7 per cent over the April figure, which was the same as the previous five months.

France

WHOLESALE PRICES.—The General Statistical Office index number on the base July, 1914=100, was 532 for April as compared with 537 for March, a decrease of 0·9 per cent for the month. The greatest decrease was in the mineral group which declined 10·2 per cent.

COST OF LIVING.—The official index number of the expenditure of a workingman's family of four persons at Paris on the base 1914=100, was 581 for the first quarter of 1937, an increase of 7·6 per cent over the previous quarter.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 105·8 for April, a decrease of 0·3 per cent from the March index number which was 106·1, and an increase of 2·0 per cent over the figure for April, 1936. The most marked decrease was one of 9·0 per cent which occurred in the non-ferrous metal group.

COST OF LIVING.—The official index number on the base 1913-1914=100, was 125·1 for April, showing an increase of only 0·08 per cent from that of the previous month. No marked changes were recorded in any of the groups.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay on the base July, 1914=100 was 103 for February, a decrease of 1·0 per cent for the month.

COST OF LIVING.—The official index number of the working class cost of living at Bombay, on the base 1914=100, was 104 for March, showing no change from the two previous months' levels.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics' index number, on the base 1926=100, was 87·8 for March an advance of 1·7 per cent for the month. Increases were reported in all but two groups, fuel and lighting materials and chemicals and drugs which declined very slightly. The greatest increase was in the metal and metal products group which increased 4·7 per cent; the farm products group increased 3·0 per cent, while the building materials group and the miscellaneous group each increased 2·8 per cent.

Dun and Bradstreet's index number (in continuation of Bradstreet's index number) which is based on the sum total of the prices per pound of 96 articles of common use, was $11·8150 at April 1, an increase of 4·1 per cent for the month. There were increases in nine of the thirteen groups, while three of the remainder showed slight decreases and one was unchanged. The largest increase was in the metals group.

Dun's index number, based on the cost per capita of a year's supply of commodities was $205·550 at April 1, an increase of 0·2 per cent for the month. Increases were recorded in the breadstuffs, meat, miscellaneous foods, and clothing groups, while there were decreases in the dairy and garden foods, metal, and miscellaneous groups.

COST OF LIVING.—The index number of the Industrial Conference Board, on the base 1923=100, was 88·3 for April, a rise of 0·5 per cent for the month, with advances in all groups except fuel and light. This is an advance of 5·9 per cent over April, 1936, and 23·2 per cent over the low point reached in April, 1933, but is still 11·8 per cent below the 1929 level.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Damages and Injunction Against Fur Workers' Union in Winnipeg

On May 6, 1937, Mr. Justice Adamson of the Manitoba Court of King's Bench gave judgment for $2,869.76 and costs against certain officers of the International Fur Workers' Union and members of Local Union No. 91. He also granted a perpetual injunction restraining the defendants from "watching and besetting" the premises of A. and M. Hurtig, furriers, Winnipeg,

> and from walking up and down, marching or parading in the vicinity of the said store, building and premises or causing or procuring others to walk up and down, march or parade . . . and from shouting or causing others to shout in the vicinity. . . and from carrying or exhibiting or causing or procuring to be carried or exhibited in the vicinity of the said store, building and premises the signs referred to in the statement of claim. . . or any similar sign, poster or banner and from accosting, following, molesting, interfering with or intimidating the employees of the plaintiffs or any of them and from preventing or frightening or causing or procuring others to prevent or frighten such employees or any of them from working for the plaintiffs.

The case arose from a strike called by the fur workers' union in August, 1936, in about 35 shops in Winnipeg employing approximately 350 workers, when the employers refused to sign an agreement with the union providing for wage increases and a forty-hour week. At the end of September, all but eight of the employers, employing about 150 workers, were reported to have signed the agreement. It appears that a number of employers signed agreements before the strike and were not involved in the dispute.

On October 9, following the filing by the Hurtig firm of a suit for $50,000 damages and an injunction, an interim order was granted by Mr. Justice Donovan restraining the union members from carrying placards appealing to the public to buy union-made goods and declaring the plaintiff firm unfair to organized labour, and from shouting or making any disturbance or interfering with the public or with employees of the firm. On October 19, the injunction was amended by Mr. Justice Taylor by the insertion of the words, "wrongfully and without lawful authority," taken from section 501 of the Criminal Code. On February 10 it was continued by Mr. Justice Dysart in force until the trial.

Section 501 reads, in part:

> Everyone is guilty of an offence punishable on indictment or on summary conviction before two justices and liable on conviction to a fine not exceeding one hundred dollars, or to three months' imprisonment with or without hard labour, who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain . . .
>
> (*f*) besets or watches the house or other place where such other person resides or works or carries on business or happens to be;
>
> (*g*) attending at or near or approaching to such house or other place as aforesaid, in order merely to obtain or communicate information, shall not be deemed a watching or besetting within the meaning of this section.

Mr. Justice Adamson quoted from the judgment in the English case of *Lyons v. Wilkins* (1899):

> The truth is that to watch or beset a man's house with a view to compel him to do or not to do what is lawful for him not to do or to do is wrongful and without lawful authority unless some reasonable justification for it is consistent with the evidence. Such conduct seriously interferes with the ordinary comfort of human existence and ordinary enjoyment of the house beset, and such conduct would support an action on the case for a nuisance at common law. . . Proof that the nuisance was "peaceably to persuade other people" would afford no defence to such an action. Persons may be peaceably persuaded provided the method employed to persuade is not a nuisance to other people.

It was then pointed out by Mr. Justice Adamson:

> The issue resolves itself into the question as to whether or not the acts and conduct complained of amount to a common law nuisance. . . There is really no dispute on the facts. The object and purpose of the strike and of these parades and disorders, which the defendants frankly admit took place, and are still taking place, are not in dispute. The object of the defendants, and others with them, is to make such a nuisance of themselves and so interfere with the plaintiffs in the legitimate conduct of their business as to compel them to sign this agreement. There can be no doubt on the facts that the defendants have been and are causing a nuisance. Acts which injure a man's business, which keep the public away, intimidate a number of his employees into absenting themselves, and make it necessary for him to convey his employees to and from work under police protection, are a nuisance at common law. They come clearly within Sec. 501 of the Criminal Code. Indeed, it is nothing more or les than mob law. The fact that such conduct has gone on for months in defiance and contempt of at least the spirit of an injunction of the Court, has been financed by money supplied by a foreign organization to the extent of $30,000 or $40,000 and has been largely led and organized by aliens, does not improve its appearance. It is not an isolated incident. It is a concerted organized effort, over a period of months, to get something by force or show of force.

> It has been a conspiracy against public order from the beginning. Why public officials charged with the duty of keeping the peace and protecting property have not intervened is difficult to understand. That aliens should be allowed to remain here and conspire against public order indicates weakness somewhere. One regrets having to make such a comment, but the injustice of permitting these people to be the mark of a mob over such a period, and the great evils which will inevitably result, compel it. Mob law is being organized and is growing; how far is law going to bow before it? No doubt many of these young people are misled and ignorant of the seriousnes of their conduct and that they are guilty of an offence. It would amount to a very small thing if the authorities once made the position clear.

Counsel for the defence contended that if the acts complained of were wrongful they were criminal under section 501 of the Criminal Code and that an injunction should not be granted to restrain acts prohibited by the criminal law. It was sought to base this argument on the judgment of the Ontario Court of Appeal in *Dallas v. Felek* (1934) where it was said:

> If there is a real case of "besetting and watching". . . within the meaning of section 501 (f) of the Criminal Code the plaintiff's remedy lies in a criminal prosecution. The equitable jurisdiction of the Civil Courts should not be extended to regulate public conduct.

Mr. Justice Adamson pointed out that in *International Ladies' Garment Workers Union v. Rother* (1923), Mr. Justice Greenshields of the Quebec Court of King's Bench had held:—

> The accomplishment of the act which would result in damages, may be restrained by the civil writ of injunction. A man may not be forced to stand quietly by and see his property destroyed because the criminal law may reach those who commit the act. The civil law will give him a remedy to prevent the destruction, and the criminal law may or may not impose a punishment on the offender.

Reference was made also to the judgment of Mr. Justice Middleton of the Supreme Court of Ontario in *Robinson v. Adams* (1924) in which it was stated:—

> The equitable jurisdiction of a civil court cannot properly be invoked to suppress crime. Unlawful facts which are an offence against the public, and so fall within the criminal law, may also be the foundation of an action based upon the civil wrong done to an individual, but when Parliament has, in the public interest, forbidden certain acts and made them an offence against the law of the land, then, ***unless a right to property is affected,*** the civil courts should not attempt to interfere and forbid by their injunction that which has already been forbidden by Parliament itself. Much less should the courts interfere when the thing complained of is not within the terms of the criminal law, although it may be rightly regarded as objectionable or even immoral, for then the civil courts by injunction are attempting to enlarge and amend the criminal law. Government by injunction is a thing abhorrent to the law of England and of this Province.

Mr. Justice Adamson held that in the case before him the defendants had caused the plaintiffs "substantial injury, expense and damage to their business" and that "there are numerous cases in which an injunction has been granted in just such cases as this."

As to the protection afforded by section 501 (*g*) of the Criminal Code, the Court held that—

> The evidence is that the attending or approaching was not "in order merely to obtain or communicate information"; the object was to injure the plaintiffs in their business to such an extent that they would be compelled to sign an agreement.

Notice of appeal against this judgment has been filed. *Hurtig et al v. Reiss et al.*, Manitoba Court of King's Bench, May 6, 1937.

Prosecution Under Ontario Act Fails Because wages Schedule is Held Ultra Vires

In the May issue of the LABOUR GAZETTE a summary was given of a decision of Mr. Justice McEvoy of the High Court of Justice of Ontario in an appeal from a conviction for violation of the schedule of wages for plumbers which was established for the Toronto district under the Industrial Standards Act. The appeal was allowed with costs on the ground that the order in council approving the schedule exceeded the powers conferred on the Lieutenant-Governor in Council in that it purported to apply to all persons employed as plumbers whereas under the Act it could be made to apply only to employees working for employers engaged in the industry.

Basing his decision on a similar argument, Magistrate Burbidge of Hamilton on May 19 dismissed a charge brought against a merchant of violating the painter's schedule of wages by paying 50 cents an hour to two painters hired to do some painting in the defendant's shop.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of June showed decided expansion, according to data tabulated by the Dominion Bureau of Statistics from 10,178 firms, each employing a minimum of 15 persons, the data being representative of all industries except agriculture, fishing, hunting and highly specialized business. The reporting firms had 1,087,735 employees at June 1, as compared with 1,011,800 in the preceding month. This advance was greater than that recorded at June 1 in any other year for which information is available. The index of employment (with the average for the calendar year 1926 as the base equal to 100) stood at 114·3 at June 1, 1937, as compared with 106·3 at May 1, 1937, and 102·0 at June 1, 1936. At the beginning of June in the preceding fifteen years, the index was as follows: 1935, 97·6; 1934, 96·6; 1933, 80·7; 1932, 89·1; 1931, 103·6; 1930, 116·5; 1929, 122·2; 1928, 113·8; 1927, 107·2; 1926, 102·2; 1925, 95·6; 1924, 96·4; 1923, 98·5; 1922, 90·3, and 1921, 87·7.

Unemployment in trade unions.—At the beginning of June, 1937, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada stood at 9·5 as compared with percentages of 11·1 at the beginning of May, and 14·8 at the beginning of June, 1936. The June percentage was based on the reports received from 1,820 labour organizations comprising a membership of 194,921 persons.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the number of placements effected each day during May, 1937, was considerably greater than that recorded during the previous month, as well as during May, 1936, the major gains in industrial groups under both comparisons being in logging, and construction and maintenance, with the only decline of importance in farming. Vacancies in May, 1937, numbered 36,016, applications 55,881 and placements in regular and casual employment 33,351.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.20 at the beginning of June as compared with $17.28 for May, the slight decrease being due to the lower cost of foods and fuel. Comparative figures for certain earlier dates are $16.33 for June, 1936; $15.41 for June, 1933 (the low point in recent years); and $21.44 for June, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 declined during the first two weeks of June and then turned upward during the remainder of the month, the advance being due mainly to higher prices for grains. For the week ended July 2 the index number was 86·2 as compared with 84·1 for the week ended June 11 and 85·1 for that ended May 28. On a monthly basis the index number was 85·1 for May, 1937; 72·3 for June, 1936; 71·4 for June, 1935; 63·5 for February, 1933 (the low point in recent years); and 93·4 for June, 1929.

Business Statistics.—The table on page 712 gives the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business, after necessary adjustments for seasonal variation, was about two per cent lower in May than in April but thirteen per cent higher than in May, 1936. Of the principal factors in the index mineral production was considerably higher in the month under review than in the previous month due mainly to higher exports of nickel, zinc and asbestos and to a greater production of coal. Gold shipments and exports of copper were lower. Other groups recording less important advances were manufacturing, trade employment, and exports, the increase in the former being due in large part to higher automobile, iron, and steel production. Construction and electric power output showed substantial declines while carloadings also were slightly lower. In the former groups contracts awarded and building permits were

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended July 2, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue. (3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month. (5) Figures for four weeeks ending June 26, 1937, and corresponding previous periods. (6) Sugar production given in periods of four weeks ending May 22 and April 24, 1937; June 13, May 16, and April 18, 1936. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Subject to revision.

much lower after correction for seasonal variation. All of the above principal factors were higher in May, 1937, than in May, 1936. Information available for June shows wholesale prices, employment, the number of cars of revenue freight, and the value of contracts awarded to be higher both as compared with the previous month and with June, 1936.

Strikes and Lockouts.—The number of strikes and lockouts recorded during June was 39, involving 7,461 workers and causing time loss of 66,037 man-working days. The most important disputes were those involving coal miners at Stellarton, N.S., gold miners at Wells, B.C., tannery employees at Toronto, Ont., men's clothing workers at Sorel, P.Q., silk factory workers at St. Hyacinthe, P.Q., enamelware factory workers at Hespeler, Ont., highway construction workers near New Glasgow, N.S., and woollen factory workers at Renfrew, Ont. In May, 1937, there were 44 disputes, involving 10,225 workers and causing time loss of 56,920 days, the principal disputes involving dress factory workers at Montreal, P.Q., knitting factory workers at Toronto, Ont., and foundry workers at Sorel, P.Q. In June, 1936, there were 15 disputes, involving 1,060 workers with a time loss of 3,310 days, none of the disputes causing considerable time loss. Of the thirty-nine disputes recorded for June, thirty-one were recorded as terminated, two resulting in favour of the employers involved, seven in favour of the workers concerned, three being partially successful, while compromise settlements were reached in twelve cases and the results of seven disputes were recorded as indefinite. Eight disputes, involving approximately 1,650 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Report of Dominion Commissioner of Unempoyment Relief

In accordance with the provisions of the Unemployment Relief and Assistance Act, 1936, a report on its operations during the fiscal year ended March 31, 1937, has been published recently. As in the case of preceding and similar enactments, the administration of this Act is under the authority of the Minister of Labour, Mr. Harry Hereford being the Dominion Commissioner of Unemployment Relief.

The report gives statistics of disbursements under the Act as well as particulars respecting grants-in-aid, works in co-operation with the provinces, assistance in the drought areas, agreements under the Farm Improvement and Employment Plan, relief settlements, etc.

A recapitulation of relief statistics reported by the provinces for the month of March, 1937, indicates that at that time the total number given direct relief was 1,207,990, of which 246,092 were heads of families. These were preliminary figures only.

In addition to a comprehensive review of relief administration under the 1936 Act, the report also presents a recapitulation of Dominion disbursements under the relief legislation of 1930, 1931, 1932, 1933, 1934 and 1935. The total of Dominion expenditure (exclusive of loans and advances) under the seven relief measures as at March 31, 1937, amounted to $262,825,810.42.

Progress in silicosis prevention

Recently the Toronto Academy of Medicine announced the results of research work in silicosis prevention. In view of the importance of this research to industrial health, particularly in mining, and because the results "represent the most outstanding contribution to the history of silicosis research," the Department of Labour requested a statement from the Banting Institute which collaborated with the McIntyre Mine in this work. In reply, Sir Frederick Banting, co-discoverer of insulin and director of the research institute which bears his name, wrote as follows:

"The work on metallic aluminum as a preventative of silicosis originated with Mr. Denny and Dr. Robson, of the McIntyre Porcupine Mine at Timmins. These two workers found that when small amounts of metallic aluminum dust were added to a solution containing silica dust, the amount of silica which went into solution was very greatly diminished. Following this observation, they dusted groups of animals using quartz with aluminum and as a control of their experiments, quartz dust without aluminum. The lungs of these animals were examined by Dr. Dudley Irwin, of this department, and it was found that there was marked fibrosis in the lungs of those animals which had been dusted with quartz alone and practically no fibrosis in the lungs of the animals which had been dusted with quartz plus aluminum.

"Robson and Denny found it difficult to extend these experiments on a large scale with the facilities available at the mine, and consequently, in January, 1937, they discussed their results with the Department of Medical Research and asked us to collaborate with them in a large scale experiment, in order to obtain the most possible information in the shortest possible time. It is thus seen that the original work was done by Denny and Robson at the McIntyre Porcupine Mine,

and to them must be attributed the credit for this most promising research in the field of silicosis. I may say that for nearly ten years there has been research on silicosis carried out in the Department of Medical Research, and I have kept in close touch with all new developments, but the work of Denny and Robson is the most promising that I have yet seen.

"At the present time a large number of animals are being dusted in this department and a number of workers, including Drs. Irwin and Franks, are engaged with a view to assisting Denny and Robson in their work."

In the July issue of the Canadian Medical Association Journal, the leading article is a preliminary report entitled "The Prevention of Silicosis by Metallic Aluminum," which was presented before the Toronto Academy of Medicine on June 15. This report is by J. J. Denny, M.Sc., metallurgical engineer; Dr. W. D. Robson, chief surgeon, McIntyre Mine, Schumacher; and Dr. Dudley A. Irwin, associate professor, Department of Medical Research, University of Toronto.

After describing the preliminary investigation, their report states:—

"Various elements and compounds were then investigated, and on March 4, 1936, two of us (D. and R.) discovered at the McIntyre Mine that the presence of small amounts of metallic aluminum almost completely prevented silicious material from passing into solution. This discovery was made after investigating Heffernan's theory, which was based on the work of Bragg. Heffernan suggests that silica is active when freshly fractured because of its molecular structure, which presents numerous unsatisfied oxygen atoms to interact with tissue elements. This suggested to us that if the unsatisfied oxygen atoms could be satisfied with nascent hydrogen it might diminish the toxicity of silica in tissue and change a fibrotic response into a simple foreign body reaction."

They discuss their findings under three sub-headings, viz—chemical, dusting and pathological. Their experiments under the first in obtaining data on the quantitative and percentage reduction in solubility of silicates through a mixture of small quantities of aluminum were carried out in special beakers. Concerning this phase they reported, in part, as follows:—

"Metallic aluminum (specific gravity 2·68), having a specific gravity about the same as quartz (specific gravity 2·66), will naturally remain in suspension in a dusty atmosphere as long as the silicious particles. We are of the opinion that the aluminum reacts as in the beaker when taken into the lung with the dangerous dusts. That is, that the rapid initial rise and concentration of the solution of the silicious material is inhibited, thereby preventing degeneration of the dust cells and the production of fibrous tissue.

"Due to the remarkable results obtained in the quartz and aluminum treated rabbits in conjunction with the beaker results, it seems reasonable to assume that metallic aluminum in small quantities administered in a similar manner will prevent other forms of pneumoconiosis, such as asbestosis, etc.

"Comparative solubility tests, run under uniform conditions on silicious materials may indicate the relative fibrosis-producing (disease producing) properties of such materials. The literature does not report any record of damage to the body when small amounts of metallic aluminum are inhaled or ingested. This may be explained by its slow rate of dissolution in body tissues. At the present time we are not in a position to state the manner in which metallic aluminum reduces the solubility of silicious material. There are several ways in which this reaction may be accounted for and work is now in progress along these lines."

Occupational "Exchange" of Populations between United States and Canada

In an address delivered in Kingston on June 16 at one of the sessions of the Conference on Canadian-American Affairs, Dr. R. H. Coats, Dominion Statistician, analysed the exchange of populations between the United States and Canada in its more permanent aspects.

In his informative analysis, Dr. Coats employed what he termed three "measuring rods of distribution"—first, geographical; second, by population groups, and third by occupations. He applied these criteria in turn to American-born residents in Canada and to Canadian-born persons domiciled in the United States.

Of these criteria, the one of particular interest to industry and labour is that dealing with occupational distribution. Referring to the American-born in Canada, the Dominion Statistician stated that this group constituted 4.27 per cent of the total occupied in Canada and observed that in the various trades, callings, industries, professions and crafts, classified in the Canadian census, this general percentage approached in a greater degree for the American-born than the corresponding percentages for other immigrants. In this respect Dr. Coats said:

"There are variations of course: the percentages for businesses like real-estate, advertising, auctioneering are high—farming is highest of all, whilst on the other hand occupations like water transportation, public employment

and common labour are low in American-born. But the point is, these highs and lows are nowhere excessive, and they deviate far less from their average than do the corresponding figures for other immigrant populations."

Referring to the situation with respect to the Canadian-born in the United States, Dr. Coats first noted that from the United States census over the last eighty years "it appears that as early as 1850 the Canadian-born numbered 148,000, which to-day has increased to the large figure of 1,280,000, or over three and one-half times the American-born in Canada..." and "that to-day Canadians make up over 9 per cent of the entire United States foreign born."

Dealing specifically with occupational activity of the Canadian-born in the United States the Dominion Statistician observed that "rather strikingly we find a very even distribution, i.e., the Canadians follow the same distribution as the rest of the U.S. population. Out of 85 occupational classes in the U.S. Census, over 50 show the Canadian-born deviating less than 1 per cent from their average in all occupations. It is not in their work but in their manner of living that the Canadians in the United States segregate. They vary, of course, occupationally, the highest deviation from the average being in forestry and fishing, the second highest in pulp and paper, whilst there is heavy representation also in wood-working, leather, textile and transportation occupations. But obviously they have invaded all the industries. The ones they chiefly avoided were farming and contingent occupations needing capital—except dairying."

Concluding this part of his analysis Dr. Coats stated:—

"The occupational data in particular show assimiability on the part of the Canadians, who went primarily to the United States as wage-earners. Apparently many took on new occupations after their transfer and have changed occupations several times. Many were young people who had no occupation when they left. In fact there is absolutely no evidence of occupations being specially affected either way. As between Canada and the United States the interchange on an occupational basis has been without apparent system. We have lent merchants and clerical workers and borrowed insurance and real estate vendors; lent labourers and borrowed hod carriers; lent housekeepers and cooks and borrowed servants; lent lawyers and borrowed clergymen, all without rhyme or reason except on the hypothesis that the emigrant has been for the most part a passive factor. Of course the length of residence of the Canadian-born in the United States has something to do with this. We noted that the average number of years spent by the United States born in Canada was 18.4. The corresponding figure for the Canadian-born in the United States is no less than 27.3, or a half greater. This reflects the movement of Eastern Canadians into New England some decades ago. Naturally, they have had more time to fit into the local occupational scheme."

Statistics of Home Improvement Loan

In a statement issued on June 30, Hon. J. L. Ilsley, Acting Minister of Finance, announced that home improvement loans in cities and towns of Canada with a population over 5,000 numbered 9,388 and amounted to $3,678,427.10 at the end of May.

These figures represented an increase of 1,361 loans amounting to $527,045.26 over the figures up to May 15. In cities with population of 40,000 and over, loans up to May 31 numbered 5,290 amounting to $2,095,682.68. In the classification between 20,000 and 40,000 there were 1,105 loans totalling $433,542.65. Cities and towns between 10,000 and 20,000 accounted for 1,426 loans worth $576,292.23. Loans in towns ranging from 5,000 to 10,000 population numbered 1,567 and amounted to $572,909.54.

Comparison of Provincial Workmen's Compensation Legislation

A comparison of provincial workmen's legislation in 1936 has recently been published in mimeograph form by the Dominion Department of Labour. In an introduction to this survey it is pointed out that in all the Canadian provinces except Prince Edward Island, one of two types of laws providing compensation for industrial accidents is in operation. The first kind of law, and the earlier in point of time, makes employers individually liable for compensation according to the scale laid down in the Act on the finding of a court to that effect and permits them to insure their risk in a private insurance company. Under the other, and now the more general system providing for collective liability, a provincial board administers a provincial accident fund; industries are classified according to the hazard involved and the employers in each class are assessed on their pay-rolls annually at a rate calculated to produce sufficient funds to take care of all accident costs in that class.

In all the provinces, the compulsory state system of collective liability has replaced that of individual liability as provided for in

earlier statutes, but an individual liability Act is still in force to some extent in Alberta and Saskatchewan. The statutes in Saskatchewan, Quebec and New Brunswick have followed closely the Ontario Act in many respects, and in the other provinces also, there has been an increasing tendency towards uniformity in recent years.

Only the main points of the provincial legislation are covered in the analysis. The scale according to which compensation is paid under these laws is set out in tabular form. A summary is given of the provisions of the Conventions and recommendations of the International Labour Conference on workmen's compensation for industrial accidents and diseases, and for equality of treatment for national and foreign workers in the matter of such compensation. A comparison is thus made possible between the standards adopted by the Conference and the Canadian statutes.

B.C. Marketing Act declared *intra vires* of provincial Legislature

According the a Canadian Press report the British Columbia Appeal Court on July 9, gave its opinion that the Provincial Marketing Act and amendments, were within the competence of the provincial Legislature. The opinion of the court, which was handed down by Mr. Justice M. A. Macdonald, stated that the Act was "to its full extent *intra vires* of the Legislature."

The British Columbia Marketing Act was passed in 1934 under provisions of the Dominion Natural Products Marketing Act. The Federal Act (LABOUR GAZETTE, April, 1934, page 304) and its amending measures provided for the creation of a Dominion Marketing Board with wide powers of control and regulation. This Act was found *ultra vires* by the Privy Council (LABOUR GAZETTE, February, 1937, page 235) sustaining a similar and unanimous judgment of the Supreme Court of Canada (LABOUR GAZETTE, July, 1936, pages 585-600). Under a provincial statute, marketing schemes continued to function, unaffected by the Privy Council's findings.

The question of the validity of the British Columbia legislation was submitted to the Appeal Court after Mr. Justice A. M. Manson of the British Columbia Supreme Court had held the provincial Act and its amendments to be outside the legislative power of the enacting Legislature, because among other things the Legislature "delegated its legislative powers to the Lieutenant-Governor-in-Council."

The British Columbia Appeal Court ruled that the Act "does not create a new deliberative body with the right to legislate...". It further found that any particular powers delegated in the Act "are within the competence of the Provincial Legislature to bestow."

The amendment to the measure, upheld in the Appeal Court's opinion, gave the Lieutenant-Governor-in-Council power "to establish, amend and revoke marketing schemes; regulate the time and place and designate the agency through which commodities may be transported, packed, stored or marketed; grant exemptions; fix fines; cancel licences; demand full information of all phases of operation; fix maximum and minimum prices and take power of seizure."

Mining Accidents in Ontario in 1936

According to a report on mining accidents in Ontario during 1936, issued by the Provincial Department of Mines (Bulletin No. 108), there were 2,413 accidents to employees at mines, metallurgical works, quarries, clay, sand and gravel pits, regulated by the Mining Act up to January 16, 1937. Sixty-three fatalities arising out of fifty-four separate accidents were reported.

These returns, the report states, represent an increase of 334 in the total number of accidents, and an increase of twenty-seven in the number of fatalities recorded over the preceding year. There were 83 non-fatal accidents per thousand men employed, a decrease of 7 per thousand from the rate for 1935. The percentage of non-fatal accidents followed by infection increased from 7·4 in 1935 to 8·9 in 1936. Expansion in industrial activity during 1936 is indicated by an increase of approximately 28 per cent in employment figures over 1935.

Of the 63 fatal accidents during the year, 46 were in gold mines, 11 in nickel mines, 4 in metallurgical works, and 2 in quarries.

The report analyses the causes of both fatal and non-fatal accidents giving full particulars in regard to each fatality.

Death of Mr. Alex Woonton

In the death of Mr. Alex Woonton at London, Ontario, on June 19, the Department of Labour and the LABOUR GAZETTE lost the services of one of its most efficient correspondents. In point of time, Mr. Woonton was second in seniority among the LABOUR GAZETTE correspondents. His appointment dated from September 17, 1900, being only preceded by that of Mr. P. J. Jobin at Quebec city on August 24, 1900 (Mr. Jobin is still the resident correspondent at Quebec).

The late Mr. Woonton was employed as a printing compositor, and for several years was a commercial traveller. He had always indicated a special aptitude for securing any information required by the Department, and was held in high personal regard by those whom he met in the course of his duties.

Rehabilitation of injured workmen in Great Britain

The social aspect of accidents, and particularly industrial accidents, was dealt with in an address given by Dr. R. Watson Jones, honorary orthopaedic surgeon, Royal Infirmary, Liverpool, at one of the sessions of the Canadian Medical Association in Ottawa on June 22. Pointing out that the treatment of physical disability by surgical procedure is only one aspect of the restoration of incapacitated men and women to normal relationships and efficiency, the speaker outlined some of the methods adopted in Great Britain in rehabilitation work.

Touching on this phase, Dr. Jones stated:—

"We are endeavouring to solve this problem in Great Britain by establishing rehabilitation centres which will be midway between the exercises of the massage department and the stresses of manual labour. Physical and mental redevelopment can be achieved by games, by the gymnasium and swimming pool and by graduated, selected work. The man with the stiff back plays bowls and digs with a hand trowel. The man with the stiff knee cycles on a racetrack and works a foot lathe. The man with the stiff fingers plays badminton and pingpong, and works with tools with handles graduated from a wide to a narrow grip. Every activity is suited to the particular disability. Exercise is undertaken not for the sake of exercise but in the course of an interesting activity, and the man's attention is deflected away from the region of the disability.

"Collective group exercises are far more valuable than individual efforts. The elements of friendly rivalry and competition, the example of other men equally or more seriously disabled, and the enthusiasm of the crowd, all overcome the attitude of helpless despair so often seen in the unguided efforts of the individual in his own home."

Dealing with results, the speaker related the experience of the only English centre that has been established for any length of time. He stated that in one consecutive series of 165 patients active surgical treatment had long since been concluded, but that these men were still totally and apparently permanently incapacitated by relatively trivial terminal disabilities. As a result of treatment in the rehabilitation centre, 115 of 165 men returned to full employment after an average period of treatment of only 17 days, and over 90 per cent were still at work a year later.

In another series of 276 men it was shown that imperfect and incomplete treatment had accounted for a wastage of 168 years. To have completed their treatment at the proper stage would have saved the employers in weekly compensation payments of $65,000 in the case of 276 men, and would have saved the men themselves over $100,000 in wages.

"Clearly this is a problem of interest to the employers as well as to workmen," declared the speaker, who commented on the active interest of His Majesty King George VI in this phase of industrial welfare. Dr. Jones also stated since this work had been explained to leading industrialists in Great Britain, many thousands of pounds had been subscribed for the establishment of expert fracture clinics and rehabilitation clinics.

Railway Employees' Pensions in the United States

Reference has been made in previous issues of the LABOUR GAZETTE to the progress of railway employees' pensions in the United States. During the past month, a new Railroad Pension Act has been enacted, being the third such Act in three years. As reviewed before the Committee on Interstate Commerce, the history of recent railway pensions in the United States dates from 1934, when the Act of that year was declared unconstitutional by the Supreme Court (LABOUR GAZETTE, November, 1934, page 1025).

In August, 1935, Congress passed a new Rail Pension Law (LABOUR GAZETTE, June, 1936, page 505) providing for a contribution of 3½ per cent of railway payrolls by employers and an equal contribution by the railway employees. In June, 1936, this enactment was also declared unconstitutional by the Supreme Court of District of Columbia. On the suggestion of the President of the United States, representatives of the railroads and the employees agreed to confer on the subject, and a voluntary agreement covering pensions was negotiated by the two parties (LABOUR GAZETTE, April, 1937, page 394).

The present measure (the Wagner-Crosser bill) is the result of that agreement. It levies taxes beginning this year at the rate of 2¾ per cent each on railroad payrolls and workers' wages; these taxes are to increase gradually to 3¾ per cent each in 1949. Pensions will be paid up to maximum of $120 a month to workers retired because of age or disability.

According to a press statement made by an official of the Canadian Pacific Railway,

although the law applies primarily to those workers employed by United States railroad corporations, a special arrangement was made on behalf of the employees of Canadian corporations working in the United States.

It was declared that the effect on Canadian railroad employees working on international services could not immediately be judged as a great deal of detail would have to be worked out before the new rate could be set.

New Amendment to curb child labour in U.S.A.

The Judiciary Committee of the United States Senate has endorsed unanimously the new child labour amendment submitted by Senator Vandenberg. This measure is designed to achieve substantially the same results as the proposal already submitted to the States while meeting most of the objections which have blocked ratification of that proposal.

(The former amendment was enacted in 1924 and required ratification by three-fourths of the States—LABOUR GAZETTE, August, 1924, page 630.)

As summarized in the *New York Times* the new amendment would grant Congress power to "limit" or "prohibit," but not the ambiguous power to "regulate" child labour; it would restrict the employment covered to that "for hire," and it would apply only to persons under 16 and not to all under 18 years of age. Perhaps more important than any of these changes, the new amendment is to be submitted not to Legislatures but to "conventions" of the States.

A few weeks ago the Senate Interstate Commerce Committee favourably reported the Wheeler-Johnson bill to bar the shipment in interstate commerce of goods produced through the labour of children under 16.

Health and Welfare Services in British Columbia

"New Developments in Health and Welfare, 1933-1937" is the title of a report issued recently by the Health and Welfare Services Branch of the Department of the Provincial Secretary of British Columbia. The report states that during the last three years the Provincial Health and Welfare Services have been thoroughly overhauled and reorganized, and that in practically every branch important changes have been made, so that "British Columbia now has a system of health and welfare services that is far more modern and efficient than before the depression." The report describes briefly the main items of new development and administrative reform since November, 1933.

A section entitled "The Program in Detail" deals with the following: health insurance, health units, tuberculosis control, mothers' pension reforms, juvenile delinquency, welfare field service, hospital policy, mental hygiene, financial relief to municipalities, reorganization and co-ordination, etc.

In its conclusion the report stated that the net provincial expenditures on health and welfare services for the fiscal year ending March 31, 1936, was $2,637,477—a per capita expenditure of $3.53. The report also gives an estimated net expenditure of $3,055,526 for the fiscal year ending March 31, 1937, or a per capita expenditure of $4.02. An estimate of the expenditure for the fiscal year ending March 31, 1938, is set at $3,756,379, or a per capita outlay of $4.85.

It is stated that the major reasons for the increase since 1934 are: restoration of hospital grants, increased mothers' pension allowances, restoration of salary cuts and re-assumption by the Province of social service charges transferred to municipalities. In addition, expenditures on certain items, such as hospital grants, mental hospital costs, and provincial poor relief, have had to be increased "because of heavier volume of services due to growth in population and the damaging effects of the depression on the population."

Unemployment Compensation in Wisconsin

On May 3, 1937, according to the June issue of *The Survey*, the Wisconsin Industrial Commission reported that since benefits became payable nine months ago, $682,000 had been paid to 34,000 workers. Each payment of compensation covered one week of either partial or total unemployment. The net balance of the Wisconsin unemployment reserve fund exceeded $21,700,000 after paying out in benefits a sum equal to 3 per cent of the total contributions collected since July 1, 1934. It is also stated that "although 4,300 Wisconsin employer accounts are now potentially liable for benefit payments, fewer than 1,800 have had occasion to make payments, and the amounts involved were, in the majority of cases, only a small part of their accumulated reserve."

The Canada Gazette of June 12, 1937, contains revised regulations "governing the licensing of businesses, callings, trades or occupations within Dominion Parks." The new regulations became effective as from May 1, 1937.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING JUNE, 1937

DURING the month of June three applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour as follows:—

1. From 36 electrical workers in the employ of the Public Utilities Commission of the City of Port Arthur, being members of the International Brotherhood of Electrical Workers. The employees request restoration of the wage rates in effect prior to the reduction in wages in 1932.

2. From 15 telephone employees of the City of Fort William, Ontario, being members of the International Brotherhood of Electrical Workers. These employees also request restoration of the wage rates in effect prior to the reduction of wages in 1932.

3. From 73 street railway employees of the Cities of Port Arthur and Fort William, being members of Division No. 966, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America. The dispute relates to the employees' request for an increase in the hourly wage rate sufficient to compensate them for the reduction in hours of work and in hourly rates of pay put into effect in 1933.

Boards Established

Two Boards of Conciliation and Investigation were established by the Minister of Labour during the month of June.

The first Board will deal with disputes respecting wages and working conditions as set forth in two applications received from approximately 1,250 employees of the Winnipeg Electric Company being (1) motormen, conductors and busmen, and Mechanical and Track Department Employees, members of the Street Railway Employees' Unit, One Big Union, and (2) operators, mechanics, meter repairers, maintenance and construction employees, telephones and signals repairers, patrolmen and appliance repair employees, members of the Winnipeg Electric Substation and Hydro Plant Unit, One Big Union (LABOUR GAZETTE, June, 1937, page 601). The personnel of this Board is as follows: Mr. Arnold Smith, of Winnipeg, chairman, appointed by the Minister on the joint recommendation of the other Board members, and Messrs. W. C. Hamilton and R. B. Russell, of Winnipeg, nominees of the company and employees respectively.

The second Board will have referred to it five applications received from employees of the Corporation of the City of Winnipeg being (1) waterworks supply workers, members of the Waterworks Operators' Union; (2) linemen, cablemen, pitmen, groundsmen, etc., members of the Linemen and Underground Mechanical Employees' Unit (Civic Employees), One Big Union; (3) high pressure pumpmen, pump house employees, electricians, maintenance men, etc., members of the Electrical and Mechanical Workers' Unit, Federation of Civic Employees; (4) clerical employees and meter readers of the hydro electric and water works systems, members of the Clerical Branch of the Federation of Civic Employees; and (5) diggers, air compressor men and joint-makers, members of the Waterworks (Diggers) Civic Employees' Unit, One Big Union (LABOUR GAZETTE, May, 1937, page 483). The member of the Board appointed on the recommendation of the various groups of employees concerned is Mr. Marcus Hyman, K.C., of Winnipeg. The city's nominee on the Board is Mr. Travers Sweatman, K.C., also of Winnipeg. Messrs. Hyman and Sweatman will confer, looking to a joint recommendation for third member, who will be Chairman of the Board.

Under the provisions of the British Columbia Apprenticeship Act (LABOUR GAZETTE, June, 1935, page 522) the following trades have been added to the schedule:

"12. machinist.

"13. Lithographing industry [including the following departments artists, camera, platemaking (including transfer), press and press feeding."]

Child Welfare in Nova Scotia

The twenty-fourth annual report of the Director of Child Welfare of Nova Scotia indicated that 121 children were placed in the care of Children's Aid Societies and the Director during the year ending November 30, 1936. During the year, 100 children were established in foster homes. There were also 84 replacements made, and twenty-eight children were returned to the care of parents or guardians. The total number of children delivered to Societies from their organization to November 30, 1936, was 2,655. In a financial statement, appended to the report, receipts of moneys passing through the Director's Office are given as amounting to $7,515.96, while expenditures, not including administration costs, total $5,876.44.

SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE tables presented below summarize proceedings under the Industrial Disputes Investigation Act for the fiscal year ending March 31, 1937, and from March 22, 1907, to March 31, 1937.

The proceedings under the Act during the fiscal year 1936-37 include three cases in which proceedings had taken place during the preceding year. On March 31, 1937, results were still pending in connection with five applications.

I.—TABLE SHOWING PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1936, TO MARCH 31, 1937

Industries affected	Number of applications for Boards	Number of Boards established	Number of strikes not averted or ended
I. Disputes affecting mines, transportation and communication and other public utilities—			
(1) Mining—			
Coal	1	1	0

Farmer Co-operatives Active in Canada

In the marketing of Canadian agricultural products, farmers' co-operative business organizations occupy an important position, and, according to the latest available records assembled in 1936 by the Agricultural Economics Branch, Dominion Department of Agriculture, 781 of these organizations were active in 1935.

In all, the 781 farmers' co-operative business organizations have 2,485 branches, making a total of 3,266 places of business engaged in the marketing of farm products and in the purchase of supplies for farmers. Shareholders and members financially interested numbered 366,885, and patrons were estimated to number 406,321. The organizations range in size from the small club serving local needs to the large association with a Dominion-wide field of activity. Sales of farm products amounted to $144,962,609; sales of supplies $12,788,192, and other revenue $414,764, or a total business turnover of $158,165,565.

Farmers' business organizations engaged in the purchasing of supplies and merchandise on the co-operative plan, number 378 associations with 423 places of business; 30,012 members; $3,517,657 assets with $1,403,652 reserves; total business, $8,420,153; miscellaneous (purchasing)—23 associations with 23 places of business; 1,222 members; $128,648 assets with $33,361 reserves; total business $258,935. Total business for all organizations —$158,165,565.

Regulations for the prevention of accidents and industrial diseases in logging in British Columbia have been issued by the Workmen's Compensation Board of that province. As published in the British Columbia Gazette of June 3, these regulations apply to all logging activities, and are designated under the following headings: Rigging, falling and bucking, yarding and loading, cat logging, truck logging, transportation of crew, equipment, signals, and general. Every person who contravenes any of the regulations is liable to a penalty of $50. Previous regulations issued on May 17, 1935, are rescinded.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM APRIL 1, 1937, TO JUNE 30, 1937

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In connection with disputes coming within the direct scope of the Industrial Disputes Investigation Act (those in mines and certain public utility industries), preliminary inquiries and mediation by officers of the Department result frequently in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period April 1 to June 30, 1937. (An article covering the period January 1 to March 31, 1937, appeared in the LABOUR GAZETTE, April, 1937, page 402.)

TELEGRAPH MESSENGERS, CANADIAN NATIONAL RAILWAYS, MONTREAL, P.Q.—The January, 1937, issue of the LABOUR GAZETTE contained a reference to an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act which had been made by telegraph messengers, members of Local No. 268, Canadian Brotherhood of Railway Employees, employed in the Commercial Telegraph Department of the Canadian National Railways. The employees desired to obtain an agreement with the Company covering wages and working conditions. At the close of 1936 negotiations, which had been arranged through the conciliation services of the Department of Labour, were still proceeding. The dispute continued to receive the attention of departmental officials over a period of weeks, and finally, at conferences which these officials held with representatives of both parties on May 27 and 28, some progress towards a settlement was made, and the Board application was withdrawn pending further negotiations between the parties affected.

TELEGRAPH MESSENGERS, CANADIAN PACIFIC RAILWAY COMPANY, MONTREAL, P.Q.—The same issue of the LABOUR GAZETTE also reported the application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act submitted by telegraph messengers, members of Local No. 269, Canadian Brotherhood of Railway Employees, employed in the Communication Department of the Canadian Pacific Railway Company. In this case the employees were also seeking an agreement with the Company covering rates of pay and working conditions.

The procedure in this dispute was practically identical with that in the case of the Canadian National telegraph messengers. The Board application was withdrawn pending further negotiations.

COAL HANDLERS, MONTREAL, P.Q.—In the April, 1937, issue of the LABOUR GAZETTE mention was made of complaints registered with the Department of Labour by certain coal handlers in Montreal against their employers. At the request of a representative of the men, a conciliation officer of the Department discussed the complaints with officials of the Dominion Coal Company and the Canadian Import Company, and subsequently held numerous conferences with representatives of all the parties involved. At the end of June the dispute remained unterminated.

GLASS FACTORY WORKERS, HAMILTON AND WALLACEBURG, ONT., AND REDCLIFFE, ALTA.—The LABOUR GAZETTE for April recorded a dispute between the Dominion Glass Company, Limited, and certain of its employees in the Hamilton and Wallaceburg, Ontario, and Redcliffe, Alberta, factories, the employees being members of the American Flint Glass Workers' Union of North America. At the close of March it appeared that conferences between the parties involved, which had been arranged through the mediation of officials of the Department of Labour, would result in a settlement. This did not prove to be the case, however, and while a few of the employees returned to work during April and May the President of the Union advised the Department of Labour early in June that the strike against the Company would continue.

LONGSHOREMEN, MONTREAL, P.Q.—In the April, 1937, issue of the LABOUR GAZETTE reference was made to the situation then existing in the Port of Montreal respecting the employment of longshoremen. In 1936 the Shipping

Federation of Canada, Inc., had an agreement with the National Independent Union of Longshoremen, and late in 1936 this agreement was automatically renewed to cover the season of 1937. Early in 1937, however, the International Longshoremen's Association organized a local union in that Port, and a dispute arose as to which union represented a majority of the longshoremen employed by the Shipping Federation, and consequently which union should hold the agreement. This matter was dealt with by conciliation officers of the Department of Labour, who held numerous conferences over an extended period. Early in May the dispute was terminated by the National Independent Union of Longshoremen's securing a charter from the International Longshoremen's Association, its agreement with the Shipping Federation in effect from April 1, 1937, being continued.

STEAMSHIP CHECKERS AND COOPERS, MONTREAL, P.Q.—On April 8, 1937, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Canada Steamship Lines, Limited, and certain of its employees being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The application stated that the management of the employing company had refused to open negotiations for an agreement covering wages and working conditions. A few days later the Department was notified that the Company had entered into an agreement with the Union des Travailleurs du Port de Montreal, Inc., covering all longshore and freight handling work in the Port of Montreal for 1937, and that the Union had advised all checkers and coopers that they must become members of this organization if they wished to continue their employment with the Company. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employers thereupon gave notice that its members would refuse to handle cargo of the Canada Steamship Lines, Limited, at Port Arthur and Fort William, Ontario, if an amicable settlement was not reached prior to May 1. This dispute received the immediate attention of departmental conciliators, and conferences which were held resulted in the withdrawal of these two classes from the agreement with the Union des Travailleurs du Port de Montreal, Inc., and their inclusion in a separate agreement, dated May 14, between the Canada Steamship Lines, Limited, and a committee of the employees. The committee was composed of members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The application stated that fifty employees were affected by this dispute.

STEAMSHIP FREIGHT HANDLERS, TORONTO, HAMILTON AND POINT EDWARD, ONT.—At the opening of navigation early in April, 1937, longshoremen, freight handlers and checkers employed by the Canada Steamship Lines, Limited, the Terminal Warehouse, Limited, and the Tree Line Navigation Company, Limited, at Toronto, Ontario, ceased work demanding increased wages. Longshoremen employed at Hamilton and Point Edward also ceased work about the same time. At the inception of the trouble the men at Toronto and Hamilton were members of an independent labour union, and the workers at Point Edward were members of the International Longshoremen's Association, but after the strikes occurred charters in all three cases were taken out with the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. At the request of representatives of the workers, officials of the Department of Labour mediated, and as a result of understandings reached work was resumed on May 17. Subsequently agreements covering the work in all three Ports were signed with the Union. It was stated that approximately 714 persons were affected by this dispute. A dispute between the Canada Steamship Lines, Limited, and its longshoremen at Windsor, Ontario, was also terminated at this time by a signed agreement.

SHOE FACTORY WORKERS, PERTH, ONT.—On May 10, 1937, a request was received for the conciliation services of the Department of Labour in connection with a strike of 100 employees of the Perth Shoe Company, Limited, Perth, Ontario, which had been in effect since April 14. The strike had been called to enforce union recognition and a closed shop agreement, but subsequently a demand was made for wage increases of 5 cents an hour for time workers and 10 per cent for piece workers. A departmental officer conferred with the employers and with a committee representing the strikers on May 10 and 11, and late on the evening of the 11th a settlement was reached. Work was resumed on the 17th. Under the terms of the agreement provision was made for wage increases of 2½ cents per hour for time workers and 5 per cent for piece workers; for union recognition for all union employees; for the recognition of a shop committee, and for the resumption of work on a seniority basis. Approximately 221 persons were employed in this factory.

METAL MINERS, WELLS, B.C.—On May 25, 1937, strikes occurred at the mines of the Cariboo Gold Quartz Mining Company, Limited, and the Island Mountain Mines, Limited, Cariboo District, B.C., involving approximately 385 miners, members of Local No. 253, Mine, Mill and Smelter Workers' International Union, an affiliate of the Committee for Industrial Organization. The conciliation services of the federal Department of Labour were at once offered to both the employers and the strikers, and the attention of the latter was directed to a provision of the Industrial Disputes Investigation Act which makes it unlawful for mine employees to go on strike on account of any dispute prior to or during a reference of such dispute to a Board of Conciliation and Investigation established under the Act. After some delay the offer of conciliation was accepted by the strikers, and an officer conferred, in Wells, with the strikers' committee on May 31. The conciliator endeavoured to persuade the men to resume work pending the establishment of a Board of Conciliation and Investigation, but this could not be accomplished. The strike appeared to have been precipitated by a dispute which arose over a demand of the miners to be promoted strictly on a seniority basis, rather than on merit, but later demands were submitted for recognition of the union, for the reinstatement of all employees without discrimination, for a 48-hour week where possible, and also an upward adjustment in wages. The departmental officer held numerous conferences with the parties involved but was unable to find any basis of settlement, and at the end of June both mines remained closed.

LONGSHOREMEN UNLOADING CARGO OF CANADIAN BARGES, NEW YORK CITY, N.Y.—On June 15, 1937, the President of the Donnacona Paper Company, Quebec, P.Q., notified the Department of Labour that members of the International Longshoremen's Association in the Port of New York had refused to unload barges operated by his Company for the reason that the crews of these barges were not members of the International Seamen's Union of America. The President stated that he was unaware of any demands having been made upon his Company by this Union for an agreement, and that the question of union recognition had never been raised by members of these crews at any time. A conciliation officer of the Department at once interviewed an official of the Canadian Seamen's Union, which is affiliated with the International Seamen's Union of America, and an official of the Shipping Federation of Canada at Montreal. As a consequence of these interviews the matter was adjusted.

ELECTRIC RAILWAY SWITCHMEN, OSHAWA, ONT.—On June 21, 1937, twenty-one freight switchmen employed by the Oshawa Electric Railway Company, controlled by the Canadian National Railways, resigned individually from the Company's service, their request for the standard rates of pay applicable on steam railways having been refused by the Company. This action resulted in the suspension of traffic in the yards of the General Motors Company, and a closing down of the plant appeared imminent. The Railway Company, however, replaced a few of the employees with men from the railway shops in Oshawa, and operations were partially resumed. At the request of officials of the Canadian National Railways a conciliator of the Department of Labour conferred, in Oshawa, with officials of the employing company and officers of the Brotherhood of Railway Trainmen, and subsequently conferences were held in Ottawa with the parties concerned. As a result of these discussions the men resumed work on June 28.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

REPORTS have been received of two cases settled recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the LABOUR GAZETTE, May, 1937, page 499, and in previous issues; and the sixth report of the proceedings of the Board, covering the period from October 1, 1933, to September 30, 1936, was issued as a supplement to the February issue of the LABOUR GAZETTE.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following Railway Brotherhoods: The Brotherhood of Loco-

motive Engineers; The Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 459—Canadian National Railways (Central Region) and the Brotherhood of Railroad Trainmen

This case concerned the claim of a yardman for a minimum day of eight hours for May 8-11-12-13, and June 6, 1936, for time lost through being displaced from a temporary vacancy in Guelph Yard contrary to an agreed understanding that "permanent vacancies or permanent new assignments created will be bulletined over the promotion district for five (5) days, and the senior qualified applicant will be assigned. Assignments will be bulletined locally for five (5) days at the Spring and Fall change of timetable and the senior qualified applicant will be assigned."

Employees' Contention.—The employees contended that at the time of the Spring change of timetable, the yardman concerned in this claim was doing the emergency relief work on the Stratford Division. Under Bulletin No. 485, of April 28, the yardman bid in and was assigned to a temporary vacancy in Guelph, 2.30 p.m. to 10.30 p.m.; and that he was the senior qualified applicant.

However, shortly after being assigned to the vacancy in question the Assistant Superintendent re-advertised this vacancy to the 14th Promotion District, directly contrary to the agreed understandings above cited.

Railway's Contention.—In a lengthy statement the railway contended that there are two yard assignments at Guelph, one from 6.30 a.m. to 2.30 p.m. and one from 2.30 p.m. to 10.30 p.m., with a Foreman and one Helper on each assignment. There is no spare board at Guelph and relief is furnished from the spare board at Stratford.

At no time during the period, May 8 to June 6, 1936, did the Yardmen's seniority entitle him to hold an assignment as Yard Helper, even on a spare board. The only work he obtained was emergency work when a spare board was temporarily exhausted. As stated above, the yardman was not eligible to bid in the 2.30 p.m. to 10.30 p.m. assignment at Guelph when bulletined locally at change of timetable, as he was not working at that point, and consequently was not a local man. The Memorandum of Understanding quoted clearly indicates, the Railway contends, that yardmen will, in seniority order, protect assignments on the 14th Seniority District. Consequently, the yardman could not be assigned as a Yard Helper while there were men senior to him on the 14th Seniority District who were laid off. The fact that the Railway acceded to the request of the General Chairman that the assignment be considered as a temporary vacancy and filled accordingly, pending the Yard Helper resuming duty, does not justify the yardman's claim for compensation for work that he was not entitled to, and did not perform.

Board's Decision.—In the opinion of the Board the evidence submitted during the hearing indicated that the vacancy in Guelph Yard caused by the illness of the Yard Helper should have been filled from the extra board at Stratford, the yardman not being assigned to the extra board at Stratford was not entitled to the vacancy.

The Board suggested, however, that the Company and the Trainmen's Committee should arrange an early meeting to clarify the meaning of the "Memo of Agreement" and when done detail advice imparted to all concerned. The claim of the employees was denied.

Case No. 460—The Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen

This dispute concerned the application of Schedule Rule No. 9, Article 5, as applying to train baggagemen and mixed and way freight brakemen handling mail intermittently on their assignment—a mixed train service between Winnipeg and Pine Falls.

The two assigned train crews work week about on the two assignments. The first week Crew No. 1 handles the Victoria Beach run and Crew No. 2 the Pine Falls. The second week the arrangment is reversed and each crew alternates on the runs every week. On the Victoria Beach asignment the mail is handled by the Train Agent, while on the Pine Falls run the mail is handled by the brakeman. For the handling of mail on the Pine Falls run, the Railways have compensated the brakeman on a pro rata basis according to the number of trips made by each brakeman on the Pine Falls run: The amount of Ten Dollars ($10) allowed under Article 5, Rule 9, being prorated between the brakemen performing the work.

Contention of Railways.—The railways' statement is as follows: "Train baggagemen and mixed and wayfreight brakemen who receive, help to load or unload, handle for the purpose of checking, transfer or delivery, between or at terminals, any sacks of His Majesty's mail on runs which regularly handle same, will be paid the sum of ten dollars ($10) per month therefor.

"When a trainman on such run works only part of a month, he will receive his due proportion of this amount, and the man or men relieving him will also receive their due proportion of same.

"Trainmen who are only intermittently required to handle mail as described above, by reason of their being assigned to trains in pool, or other service, some of which do not regularly carry mail, will be compensated therefor on the basis of fifty cents (50c.) per trip, with a maximum of ten dollars ($10) per month. On short turn-around runs a round trip will be considered a trip within the meaning of this clause."

In accordance with past practice where two crews have been assigned to work alternate weeks on a run where mail is regularly handled, the full sum of ten dollars ($10) has been allowed for handling mail on such runs, the amount being pro-rated between the brakemen of No. 1 and No. 2 crews on the basis of the number of trips mail was handled by each brakeman throughout the month.

The Railways considered that Brakemen are being correctly compensated for handling mail on this run, in accordance with Rule 9 of Article 5 of the Schedule.

Employees' Contention.—The employees claimed that Rule 9, Article 5, Trainmen's Schedule clearly provides that "trainmen required to handle mail intermittently on their assignment on account of being assigned to trains in pool or other service, some of which do not regularly carry mail, will be compensated therefor on the basis of fifty cents per trip with a maximum of $10 per month." The employees further contended that on the set of runs in question the Railway is compensating the Employees by paying for this service at the rate of $10 per month, divided proportionately between the men handling mail, which amounts to less than fifty cents per trip as provided for in the schedule rule referred to.

The Employees therefore requested the Board to arrange to have the obvious intent of the rule applied, and the Employees compensated in the amount withheld from them by reason of the interpretation now placed on the rule by the Railway Company.

Board's Decision.—Parties to the dispute appeared before the Board and submitted oral statements in support of their respective contentions. At the hearing it was developed that the pooling of the crews to these two runs was made by mutual agrement to enable the crews to share the mileage. The decision of the Board was that the rule of the schedule provides for payment of 50 cents per trip with a maximum of $10 per month, but under the circumstances quoted above and in view of these two trains being pooled by mutual agreement, the claims of the employees in this particular case was not sustained.

A moderate improvement in the business transacted by food chains in Canada last year is reflected in preliminary compilations for the annual Census of Merchandising Establishments. These show that sales for 1936 of 90 chain companies specializing in the retail distribution of groceries and meats exceeded by six per cent the amount recorded for 86 similar organizations in 1935. The 90 chain companies in Canada last year operated 2,341 stores with $111,560,900 sales, while the 86 companies in 1935 had 2,309 stores and $105,635,900 sales. Sales per store averaged $49,938 or about 6 per cent higher than in 1935 although still 13 per cent below the 1930 average.

Excepting only in Manitoba where a slight recession of one per cent was recorded, increases in food chain sales were reported in all provinces, in comparison with 1935. The totals were as follows, with percentage changes in brackets: British Columbia, $10,808,000 (+6·5); Alberta, $5,589,900 (+6·5); Saskatchewan, $5,004,100 (+9·8); Manitoba, $4,765,100 (—1·0); Ontario, $60,133,200 (+6·4); Quebec, $19,579,800 (+4·1); Maritime Provinces, $5,680,800 (+2·5).

The British Columbia Gazette of June 3 contains amended regulations of the Workmen's Compensation Board "for the prevention of accidents and industrial diseases in submarine diving." In particular, Regulation 26 of the regulations adopted on October 12, 1933, is rescinded and the following is substituted therefor:

"26. Where, in the opinion of the Board, diving operations are carried on under conditions or in locations which are specially hazardous or to a greater depth than 114 feet, the assitance of a second diving crew and equipment shall be immediately available."

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1937

THE following table shows the number of disputes, workers involved, and time loss for June, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man-working days
*June, 1937	39	7,461	66,037
*May, 1937	44	10,225	56,920
June, 1936	15	1,060	3,310

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for June was slightly less than in May, as well as the number of workers involved, but the time loss was somewhat greater owing to strikes of coal miners at Stellarton, N.S., tannery employees at Toronto, Ont., gold miners at Wells, B.C., and men's clothing factory workers at Sorel, P.Q. In May the most important disputes involved dress factory workers at Montreal, P.Q., silk knitting factory workers at Toronto, Ont., and foundry workers at Sorel, P.Q. In June, 1936, none of the disputes caused great time loss, the most important involving sawmill workers at Cabano, B.C.

Fifteen disputes, involving 3,742 workers, were carried over from May, including that involving sawmill workers at Crooked River, Sask., which was not reported to the Department in time for inclusion in the detailed list for the month of May. Twenty-four disputes commenced during June. Of these thirty-nine disputes, thirty-one terminated during the month, two resulting in favour of the employers concerned, seven in favour of the workers involved, while compromise settlements were reached in twelve cases and the results of seven disputes were recorded as indefinite. At the end of June, therefore, there were eight disputes recorded as strikes or lockouts, namely: gold miners, Wells, B.C., rubber factory workers, Toronto, Ont., tannery employees, Toronto, Ont., men's clothing factory workers, Sorel, P.Q., custom tailors, Toronto, Ont., hat factory workers, Brockville, Ont., woollen factory workers, Peterborough, Ont., and plumbing supplies factory workers, Montreal, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received, indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to six such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; glass factory workers at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; meat packing employees, Vancouver, B.C., December 29, 1936, one employer, and fur factory workers, Winnipeg, Man., August 11, 1936, seven employers, the last two being added to the list this month.

Three disputes carried in the above list for some time have been removed during June, namely: restaurant workers, Toronto, Ont., February 1, 1937, one employer, which was called off by the union involved about June 15; and meat packing workers, Edmonton, Alta., April 3, 1937, three employers, and laundry employees, Edmonton, Alta., April 8, 1937, two employers, which are considered to have lapsed by the end of the month.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute involving three labourers employed on the demolition of a building at Toronto, Ont., on June 8, for five hours has been reported, an increase in wages from 25 cents per hour to the union rate of 40 cents and 45 cents being secured.

A cessation of work by seven press employees in a paper goods establishment at Hamilton, Ont., on June 23 has been reported. Those involved were young men doing boys work and when wage increases were requested after two or three years service the management told them higher rates could hardly be paid for that work but it would be considered. They were advised to seek better positions elsewhere and that time off would

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1937*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to June, 1937				
MINING, ETC.—				
Gold miners, Wells (Cariboo District), B.C.	2	378	9,800	Commenced May 25, 1937; for union recognition and wage increases; unterminated.
Coal miners, Inverness, N.S.	1	350	1,900	Commenced May 27, 1937; *re* distribution of work; terminated June 7, 1937; work resumed pending investigation; indefinite.
Coal miners, Stellarton, N.S.	1	1,300	20,000	Commenced May 31, 1937; for increased wages; terminated June 21, 1937; work resumed pending investigation; indefinite.
MANUFACTURING—				
Fur, Leather, Etc.—				
Fur factory workers, Winnipeg, Man.	7	80	2,000	Commenced Aug. 11, 1936; for union agreement, increased wages and forty hour week; employment conditions no longer affected by June 30, 1937, following provincial investigation; partially successful.
Textiles, Clothing, Etc.—				
Knitting and spinning factory workers, Kincardine, Ont.	2	50	250	Alleged lockout for union activity, commenced May 4, 1937; partial return of workers, lapsed early in June, 1937.
Men's clothing factory workers, Sorel, P.Q.	1	250	5,000	Commenced May 24, 1937, for enforcement of agreement terminating strike of May 19, unterminated.
Tailors, custom, Toronto, Ont.	1	20	500	Commenced May 20, 1937; for union recognition, wage increases, etc.; unterminated.
Knitting factory workers (silk), Sherbrooke, P.Q.	1	650	650	Commenced May 29, 1937; for increased wages and improved working conditions; terminated June 1, 1937, by conciliation (provincial); compromise on wage increase and employees' committee to negotiate for working conditions.
Miscellaneous Wood Products				
Furniture factory workers, Toronto, Ont.	8	110	500	Commenced May 25, 1937; for union agreement with wage increases, etc.; terminated June 2, 3 and 16, by negotiations and conciliation (provincial), in favour of workers.
Sawmill workers, Crooked River, Sask.	1	102	900	Commenced May 26, 1937, for increased wages; terminated June 5, 1937, by negotiations; compromise.
Metal Products—				
Automobile castings factory workers, Windsor, Ont.	1	200	1,000	Commenced May 13, 1937, for increased wages, reduced hours and union recognition; terminated June 5, 1937, by conciliation (provincial); compromise on wage increase and reduced hours, shop committee recognized.
Sheet metal workers, Toronto, Ont.	17	85	765	Commenced May 31, 1937, for increased wages; terminated June 10, 1937; conciliation (provincial); compromise.
CONSTRUCTION—				
Buildings, Etc.—				
Carpenters and labourers, Glace Bay, N.S.	1	22	264	Commenced May 1, 1937, for increased wages; terminated June 14, 1937; negotiations, in favour of workers.
Highway—				
Highway construction workers, New Glasgow District, N.S.	1	140	2,240	Commenced May 27, 1937, for increased wages; terminated June 18, 1937; wages increased from 25c. to 30c. per hour, partially successful.
TRADE—				
Bottle washers, Toronto, Ont.	1	5	65	Commenced April 21, 1937; for increased wages and reduced hours; terminated June 15, 1937; by negotiations, compromise, wages increased 10c. per hour.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1937—*Continued*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during June, 1937				
MINING, ETC.—				
Coal miners, Florence, N.S.	1	675	675	Commenced June 1; in protest against refusal of machine runners to work on Sunday; terminated, June 1; indefinite.
Coal miners, Glace Bay, N.S.	1	17	68	Commenced June 23; for change in method of wage payment; terminated June 26, men ordered back by union pending negotiations under agreement; indefinite.
Coal miners, New Waterford, N.S.	1	37	55	Commenced June 23; in sympathy with miners on strike at Glace Bay, June 23; terminated June 24; indefinite.
MANUFACTURING—				
Vegetable Foods—				
Bakers and bakery drivers, Sorel, P.Q.	12	90	90	Commenced June 16; for increased wages; terminated June 16, by negotiations; in favour of workers, union agreement signed.
Rubber Products—				
Rubber factory workers, Toronto, Ont.	1	35	315	Commenced June 21; against discharge of workers alleged to be for union activity; unterminated.
Fur, Leather, Etc.—				
Tannery employees, Toronto, Ont.	1	400	10,000	Commenced June 1; against emploment ofy a certain worker; unterminated.
Textiles, Clothing, Etc.—				
Textile factory workers (woollens), Renfrew, Ont.	1	75	70	Commenced June 14; for increased wages; terminated June 14; work resumed pending negotiations, indefinite.
Textile factory workers (woollens), Renfrew, Ont.	1	39	215	Commenced June 18; for increased wages; terminated June 24; by negotiations, 10% increase made.
Textile factory workers (silk), St. Hyacinthe, P.Q.	1	264	1,188	Commenced June 15; for increased wages and new agreement; terminated June 19; by conciliation (provincial), in favour of workers.
Textile factory workers (woollens), Renfrew, Ont.	1	125	600	Commenced June 19; for increase in wages and reduction in hours; terminated June 24; by conciliation (provincial), compromise, wages increased 10%, committee for future adjustments.
Textile factory workers (woollens), Renfrew, Ont.	1	110	700	Commenced June 19; for increases in wages and reduced hours; terminated June 28; by conciliation (provincial), compromise on wages, hours and working conditions to be negotiated by committee.
Hat factory workers, Brockville, Ont.	1	174	696	Commenced June 26; for union recognition, increased wages and changes in working conditions; unterminated.
Textile factory workers (woollens), Peterborough, Ont.	1	340	600	Commenced June 29; for increased wages; unterminated.
Metal Products—				
Foundry workers, Sorel, P.Q.	4	700	1,400	Commenced June 1; against employment of non-union workers; terminated June 2, by conciliation (provincial) in favour of workers.
Car wheel factory workers, Trenton, N.S.	1	45	180	Commenced June 2; for increased wages; terminated June 5; negotiations, compromise.
Enamelware factory workers, Hespeler, Ont.	1	142	2,000	Commenced June 8; for increased wages and changes in working conditions; terminated June 24; by conciliation (provincial), compromise.
Moulders, New Glasgow, N.S.	1	40	280	Commenced June 23; for increased wages; terminated June 30, negotiations, compromise.
Plumbing supplies factory workers, Montreal, P.Q.	1	100	200	Commenced June 29; for recognition of union and increased wages; unterminated.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1937—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during June, 1937—Conc.				
CONSTRUCTION—				
Highway—				
Highway construction workers, Springhill, N.S.	1	50	100	Commenced June 4; for increased wages; terminated June 5; wages increased from 27c. per hour to 30c.; partially successful.
Truck drivers, St. Peters District, N.S.	3	100	300	Commenced June 16; for increased wages; terminated June 18; conciliation (provincial), compromise.
TRANSPORTATION—				
Electric Railways—				
Trainmen (freight), Oshawa, Ont.	1	21	126	Commenced June 21; for increased wages; terminated June 26; conciliation (Dominion); work resumed pending negotiations.
Water—				
Pulpwood loaders, Spanish, Ont.	2	30	27	Commenced June 27; for increased wages, 50c. per hour instead of piece work; terminated June 27; negotiations, compromise, wages increased to 40 cents.
TRADE—				
Dairy employees (dri-(vers), Toronto, Ont.	1	35	18	Commenced June 30; against dismissal of of worker; terminated June 30; negotiations, in favour of workers, union agreement to be negotiated.
SERVICE—				
Recreational—				
Caddies (golf), Ottawa, Ont.	1	75	300	Commenced June 27; for increased wages; terminated June 30; replacement and return of workers; in favour of employer.

* In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

be given for this. The young men, however, left and were paid off, several securing other positions.

A dispute involving a number of workers in a rubber factory at Guelph, Ont., has been reported in the press but particulars have not been secured by the Department. It appears that a brief cessation of work occurred on June 4 owing to a misunderstanding as to wage adjustment. On June 21 the establishment was reported to be picketed by union rubber workers from Kitchener.

A cessation of work by 110 employees in the bar mill of a steel manufacturing plant at Sydney, N.S., for almost one day, June 23, has been reported, owing to a misunderstanding in negotiations for an adjustment of wages. It appears that the management refused to meet a departmental committee instead of the executive officers of the union, the Amalgamated Association of Iron, Steel and Tin Workers of North America, the employees having voted to be represented by this union. At a conference of the management and union officials with the provincial Premier and Minister of Mines it was ascertained that the union executive wished to be accompanied by the departmental committee for the negotiations and, this being arranged for, work was resumed.

Disputes by Industries

The following is a review of disputes by industries in which strikes and lockouts occurred during the month, giving particulars as to certain disputes in addition to the information given in the tabular statement.

Mining

In connection with the strike of gold miners in the Cariboo district in British Columbia, conciliation by the western representative of the Department of Labour did not result in a settlement or in a resumption of work pending an investigation by a Board under the Industrial Disputes Investigation Act. The proceedings are outlined elsewhere in this issue.

The coal miners at Stellarton, N.S., resumed work pending negotiations on the advice of the district executive and the international president of the United Mine Workers of

America. The agreement had expired on January 29, 1937. It was arranged that the provincial government would provide for an investigation into the affairs of the employing company which has been in receivership for some years.

The miners at Florence, N.S., ceased work for one day, Tuesday, June 1, in protest against the refusal of the machine runners to work on Sunday in order that the mine could be operated on Monday. This had occurred on several occasions, as stated in the Labour Gazette for June, page 611. On June 27 the machine runners again refused to work so that the mine was not operated on Monday, June 28.

The strike of seventeen coal miners, bankhead workers and bottomers, at Glace Bay, N.S., on June 23, seeking a local contract at tonnage rates instead of datal wages as provided in the union agreement, involved 1,100 other employees indirectly. The bankhead employees at New Waterford, N.S., ceased work in sympathy but also demanded a similar change and had ceased work for this demand from April 26 to May 4, unsuccessfully. This strike also involved 1,100 other employees indirectly. The union officials declared the strike unauthorized and directed the men to resume work. At New Waterford this was done on June 25. At Glace Bay on June 25 the management agreed to meet a committee for negotiations and the men decided to resume work on the following Monday.

Manufacturing

RUBBER PRODUCTS.—The strike at Toronto on June 21 involved a number of employees in one establishment, variously reported from 35 to 75 out of 175. The United Rubber Workers of America had commenced to organize the employees and the employer had secured a pledge from nearly all not to participate in union activity until September. Four men, union officers, were discharged for persistent "trouble making" and the others ceased work. Longshoremen, members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, etc., were reported to have refused to handle the company's products at the docks, but the company stated that shipments were going forward. The establishment was picketed but a settlement had not been reported at the end of the month.

FUR, LEATHER AND OTHER ANIMAL PRODUCTS.—The strike of fur workers at Winnipeg, Man., which commenced on August 11, 1936, is recorded as lapsed by the end of June. A Commissioner had been appointed under the Manitoba Evidence Act on November 13, 1936, to investigate the dispute (LABOUR GAZETTE, December, 1936, pages 1116-1117). The report was made on June 14, 1937, and stated that the strike was to secure recognition of the International Fur Workers' Union, a local of which had been organized in Winnipeg in 1936. The Commissioner found that only twenty-five per cent of the workers had joined the union and a number of the employers refused to recognize it as it did not represent their workers. The union members and their sympathizers were held responsible for intimidation, coercion, etc. The allegations that some of the employers were violating the minimum wage law were declared to be not substantiated. The Commissioner was not required to make recommendations and did not succeed in bringing about a settlement during the inquiry. No action to bring about a settlement following the report has been reported. The strikers have been substantially replaced in the establishments still involved. The dispute is, therefore, transferred to the list of disputes not called off by the unions concerned although employment conditions are no longer affected in the establishments involved.

The dispute involving tannery employees in one establishment in Toronto, Ont., resulted from a protest by the Canadian Shoe Workers' Union and Allied Crafts against the re-employment of one worker who had been expelled from the union, the employer closing the establishment. The union had been seeking an agreement as to wages and working conditions and decided not to resume work until this had been secured.

TEXTILES, CLOTHING, ETC.—Four of the disputes were carried over from May, two being unterminated at the end of June, namely those involving men's clothing factory workers at Sorel, P.Q., and custom tailors in Toronto, Ont.

Employees in two woollen mills at Renfrew, Ont., ceased work twice during the month. The workers were unorganized and refused to join any union. Final settlements were reached through mediation of an official of the Ontario Department of Labour.

The strike of silk mill workers at St. Hyacinthe, P.Q., was due to dissatisfaction with the application of an agreement terminating a strike in September, 1936, a new agreement being demanded and secured, providing for employment of none but members of the National Catholic Union of Textile Workers in all departments. The agreement is outlined elsewhere in this issue.

The strike of hat factory workers at Brockville, Ont., was called by the United Hatters, Cap and Millinery Workers' International Union which demanded a closed shop agree-

ment and a change in the system of wage payment, etc. An official of the Ontario Department of Labour interviewed representatives of the management and of the employees. It was reported that there would be further negotiations when the manager returned.

The strike in one woollen mill at Peterborough, Ont., began with a cessation of work by eighty weavers on June 29, being joined by other employees later in the day. The workers became organized in a local of the United Textile Workers of America and on July 2 were joined by employees in another woollen mill operated by the same company. Early in July the Ontario Deputy Minister of Labour met the representatives of both parties with a view to negotiations for settlement.

Miscellaneous Wood Products.—The strike of sawmill workers at Crooked River, Sask., involved a number variously reported as from sixty to one hundred and twenty-five, demanding increases in wages of seven and one-half cents per hour with a minimum of 25 cents per hour for the ten-hour day. The remainder of the 160 to 175 employees were indirectly affected. It was reported that five out of fifteen new employees joined in the strike. Finally the employer's offer of an increase of 2½ cents per hour with a bonus of 2½ cents for those who worked for the season was accepted and work was resumed.

Metal Products.—Two of the disputes were carried over from May, being terminated in June.

Sheet metal workers employed in seventeen establishments in Toronto, members of the International Sheet Metal Workers' Association, ceased work on May 31, the agreement having expired on April 30. The union sought an increase in wages from 82½ cents per hour to 90 cents, and the employers offered 85 cents. Conferences at the offices of the Ontario Department of Labour did not result in a settlement but finally an agreement was signed providing for a rate of 87½ cents per hour until March 31, 1938, and 97½ cents per hour until February 28, 1939. The agreement is outlined elsewhere in this issue.

The strike at Sorel, P.Q., followed a strike in May, the employees on returning to work objecting to the employment of certain workers who had worked during the strike and alleging discrimination against some of the strikers. Employees in one shipyard, reported to be associated with the foundries, also ceased work. As a result of conciliation by an official of the provincial government a settlement was reached. The employers agreed to recognize the union and to advise all workers to join it but would not grant the closed union shop. The agreement is outlined elsewhere in this issue.

The strike of car wheel factory workers at Trenton, N.S., on June 2, for an increase in wages occurred when negotiations were in progress for an increase in a car manufacturing establishment for which car wheels were produced. Employees in both establishments were members of the steel workers' union, the Amalgamated Association of Iron, Steel and Tin Workers. For the car manufacturing establishment a five per cent increase was agreed to but the wheel factory employees demanded fifteen to twenty per cent. The strike was not authorized by the union. Work was resumed on June 7 pending a settlement and later a 7½ per cent increase for certain classes was agreed upon.

The strike of enamelware workers in one establishment at Hespeler, Ont., was begun by about fifty workers on June 8, who were joined by most of the remaining employees on June 15. During the strike they were organized as members of the Amalgamated Association of Iron, Steel and Tin Workers of North America. The strikers demanded a wage increase of 10 cents per hour and improvements in working conditions. Negotiations from time to time resulted in settlement of all points except the wage increase and on June 25 through the mediation of the local member of the provincial legislature and an officer of the Ontario Department of Labour an agreement was signed providing for an increase of four cents per hour, an average of 15 per cent; also for time and one-half for overtime beyond fifty hours, and recognition of a committee representing union employees. Pickets prevented the movement of a car of products for a day but allowed it to be moved on the last day of the strike. A local stove factory was reported to have been affected by a shortage of materials. The agreement is outlined elsewhere in this issue.

The strike of moulders at New Glasgow, N.S,. involved members of the International Moulders' Union of North America and about fifty other employees were indirectly affected. The management objected to a wage increase as reductions in wages amounting to twenty per cent since 1929 had been restored in 1935 and 1936 while prices of products had not advanced and raw materials were up in price considerably. An increase of four cents per hour for moulders at 54 cents was made, two men at 44 cents also being raised to 58 cents, while those at higher rates were increased three cents per hour. Apprentices were increased one cent per hour.

Employees in one establishment at Montreal, P.Q., manufacturing plumbing supplies (brass finishers, moulders, machinists, etc.) demanded the restoration of the wage rates in 1929, and recognition of the Amalgamated Association of Iron, Steel and Tin Workers of North

America. The establishment was closed and was picketed by the union. Toward the end of June mediation by the provincial Department of Labour was offered and accepted by the union.

Construction

BUILDINGS AND STRUCTURES.—The strike of carpenters and labourers at Glace Bay, N.S., which commenced on May 1 for increases in wages was settled by negotiations on June 13 and work was resumed by the various trades soon after. An agreement signed with the Federated Workers' Union is reported to provide for the eight hour day, 70 cents per hour for first class carpenters, 60 cents per hour for second class carpenters, 70 cents for plumbers and $3.71 per day for labourers, the rate in the coal mines.

HIGHWAY CONSTRUCTION.—The strikes of highway workers near New Glasgow, N.S., and Springhill, N.S., were terminated when the provincial government raised the rate for labourers from 27 cents per hour to 30 cents. The truck drivers on strike at St. Peters, N.S., members of the Inverness-Richmond Truckmen's Union, resumed work after a conference with the Premier of Nova Scotia, arrangements being made for an investigation by the provincial Deputy Minister of Labour.

Transportation

ELECTRIC RAILWAYS.—The conciliation proceedings which resulted in a termination of the dispute involving freight trainmen on the Oshawa Electric Railway are outlined elsewhere in this issue.

Service

RECREATIONAL.—A number of the caddies at one golf club at Ottawa, Ont., ceased work on June 27 demanding an increase in rates of pay from 50 cents for an eighteen hole course to 75 cents with corresponding increases in other scales. The club officials stated that the demand would be put before the directors if work were resumed and finally notified the caddies to apply for their positions by July 1. Over half of the strikers did so and the remainder were replaced.

Minor disputes involving caddies at Saint John, N.B., on June 5, and Kitchener, Ont., on June 8, demanding increases in rates from 50 cents per round to 75 cents have been reported. Work was resumed in an hour, the rates to be discussed with the directors.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1936. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in May was 90 and 25 were still in progress from the previous month, making a total of 115 in existence during the month, involving 73,000 workers with a time loss of 814,000 man working days for the month.

Of the 90 disputes beginning in May, 26 were over demands for increases in wages, and 31 were over other wage questions; 2 were over questions of working hours; 17 were over questions respecting the employment of particular classes or persons; 6 were over other matters concerning working conditions; 7 were on questions of trade union principle and 1 was in support of workers involved in another dispute.

Final settlements were reached in 92 disputes during May, of which 23 were settled in favour of the workers, 48 were settled in favour of the employers and 21 resulted in compromises. In the case of 3 other disputes work was resumed pending negotiations.

As reported in the June issue of the LABOUR GAZETTE, page 617, the London omnibus dispute was terminated and work was resumed on May 28 on conditions providing for further negotiations, for investigation of conditions of employment in relation to their effects on the health of the men and for the examination of certain other questions. On June 15, the executive of the Transport and General

Workers' Union which had taken over the conduct of the strike from the Central Bus Committee, ratified an agreement with the London Transport Board.

The agreement as outlined in the press provides that the ultimate effect of the new scales will be to increase maximum wages by 1s. 6d. and 6d., the former "no accident" bonus being now included in wages. Other increases in payment affect early duties, the learning period, spreadover of duties and standby time. The maximum time worked is not to exceed eight hours instead of the eight and a half previously possible. All disputes about terms are to be discussed between representatives of the Board and the union and referred, if necessary, to a board of referees chosen mutually or set up by the Minister of Transport.

The Netherlands

The report on strikes and lockouts during 1936, issued by the Central Bureau of Statistics of the Netherlands shows that there were 92 disputes beginning during 1936 which together with 4 which were unterminated at the end of the previous year made a total of 96 disputes in progress during 1936, as compared to 152 in 1935. The number of workers directly affected was 9,070 and the resulting time loss was 94,800 man working days.

United States

Preliminary figures indicate that about 475 strikes began during April, 1937, and that 275 were continued from the previous month, making a total of 750 disputes in progress during April. About 350,000 workers were involved in these disputes which resulted in approximately 3,385,000 man-days of idleness. As compared with the figures for the previous month, the April figures indicate a decrease of about 25 per cent in the number of strikes occurring and a decrease of about 35 per cent in the number of workers involved in the strikes beginning in the month. Due to the fact that a large number of strikes, including several of the largest ones, were continued into April, the number of workers involved in strikes in progress and the resulting number of man-days idleness were a little higher than in March.

As compared with April, 1936, the figures for April, 1937, show increases of 160 per cent in the number of strikes, 170 per cent in the number of workers involved and 384 per cent in the number of man-days of idleness.

STRIKE OF STEEL WORKERS

The strike of steel workers for recognition of the Steel Workers' Organization Committee, for the Amalgamated Association of Iron, Steel and Tin Workers of North America, which began May 26 (LABOUR GAZETTE, June, 1937, page 619), continued throughout the month of June. The various state governments have attempted, for the most part unsuccessfully, to bring the strikers and the employers together, with a view to reaching a settlement. The workers continue to demand signed contracts between the employing companies involved and the Steel Workers' Organizing Committee, while most employers refuse to enter into any such contracts.

On June 16, the governor of Ohio appealed to the federal government to make further efforts to effect a settlement. The following day the Secretary of Labour announced the creation of a Federal Steel Mediation Board of three members. This board, which was created under the terms of the National Mediation Act of 1913, was authorized to investigate all phases of the strike, conduct hearings and recommend a settlement. Headquarters of the board were set up at Cleveland, Ohio. After conversations and investigations the Mediation Board proposed (1) that an agreement between the unions and the companies be reached and signed; (2) that work be resumed; (3) that a secret election be held under the National Labour Relations Act; (4) that the agreement should only become effective if the union won the election. The companies involved rejected these proposals and the Mediation Board was unable to arrange meetings of the strikers and employers.

During the month some plants endeavoured to keep their plants operating, either by quartering non-striking employees in the mills or by encouraging employees not satisfied with the union's conduct of the strike to return to work. Several demonstrations resulting in riots took place.

On July 1, the Inland Steel Company of East Chicago, Indiana, arranged a truce with the union and it was reported that 9,500 of the normal force of 12,000 workers returned to work. The terms of the truce signed by the company and the executive of the union provide: (1) The company recognizes the Steel Workers' Organization Committee as the bargaining agent for its workers; (2) workers will be rehired without discrimination; (3) work will continue until the National Labour Relations Board reaches a decision in an inquiry now under way to determine whether the Inland Steel Company violated the terms of the National Labour Relations Act by refusing to sign a union contract.

OTHER DISPUTES

On June 7, there was a general strike in Lansing, Michigan, which affected all business in that city. The demonstration was called for by the United Automobile Workers' Union in retaliation for the arrest of eight pickets charged with violating an anti-picketing injunction and with interfering with a labourer in connection with a local strike. The governor of the state conferred with the strikers' organizers and the employers involved in the arrest of the picketers, who were subsequently released, and the "labour holiday" was terminated the following day.

Two days later employees of the Consumers' Power Company at Flint, Michigan, struck work in protest against an agreement which was being negotiated for them by their union, the United Automobile Workers. This strike left three large cities and 192 smaller communities without light or power. It is reported that more than 100,000 labourers were forced to cease work for lack of power. Both the governor of the state and the executive of the United Automobile Workers' Union (who had not authorized the strike and who stated that it was organized by persons wishing to make trouble for the union) urged the men to return to work and the power plants were fully staffed and operating again the same evening.

LABOUR ORGANIZATION DISCUSSED AT CONFERENCE ON CANADIAN-AMERICAN AFFAIRS

Summary of Views Presented by Canadian and American Authorities

FEATURING one of the sessions of the Conference on Canadian-American Affairs held at Kingston on June 14-18 (under the auspices of Queen's University, St. Lawrence University and the Carnegie Endowment for International Peace) was a discussion on Labour Organization. Noteworthy contributions concerning the modern factors involved in the new orientation of labour relationships were made by eminent Canadian and American authorities.

Presiding at this particular session was Mr. Tom Moore, vice-chairman of the National Employment Commission and formerly president of the Trades and Labour Congress of Canada. Interesting papers dealing with various phases of the subject were presented by Mr. Isador Lubin, Commissioner of Labour Statistics, United States Department of Labour, and Mr. Ernest Ingles, Canadian vice-chairman of the International Brotherhood of Electrical Workers. The discussion was led by Miss Mary Van Kleeck, director of the Department of Industrial Studies, Russell Sage Foundation, and Professor H. A. Logan, University of Western Ontario. Among others participating were: Professor F. R. Scott, McGill University; Professor M. D. Steever, Lafayette College; President W. W. Atwood, Clark University; and Professor Norman McKenzie, University of Toronto.

Interlocking Social Problems

Commenting on preceding sessions which had been devoted to consideration of tariffs and of the effect of movements of population between Canada and the United States, the chairman, Mr. Tom Moore, pointed out that there was undoubtedly an aspect to this which might have an important bearing on the labour situation in Canada. Workers who previously could during times of depression in Canada secure employment in the United States, or those who in normal times sought to secure higher remuneration for their services found an easy outlet to the south of the border. With the practical closing of these channels through the establishment of quota laws, the stricter enforcement of the alien labour law, etc., these workers were now compelled to rely upon Canadian opportunities for employment.

The result of this had already demonstrated itself in a greater determination of Canadian workers to secure remuneration for their work commensurate to that which they would undoubtedly have received had they been free to seek work in the United States.

He considered that another reaction to this situation was the fuller recognition by many Canadian workers of the need of a certain degree of tariff protection if the industries in which openings for exercise of their acquired skill were to be maintained in face of the more powerful industries of the United States.

Another factor which was worthy of consideration was the effect of the development of social security legislation. The establishment in Great Britain of Old Age Pensions at 65, Health Insurance, Unemployment Insurance, etc., had undoubtedly reduced the volume of emigration to Canada from that country, and it was altogether likely that the bringing into operation of social security measures in the United States would have its repercussions in the movement of peoples between that country and Canada, probably in the form of still stricter enforcement of laws prohibiting the entry of Canadian workers who might ultim-

ately become a charge on these United States funds.

These matters he simply quoted as illustrations of the interlocking character of many economic and social problems between the two countries, especially as they affected the wage earning classes.

Labour Organization Defined

Mr. Ernest Ingles, Canadian vice-chairman of the International Brotherhood of Electrical Workers, defined labour organization as "a voluntary union of persons engaged in a similar trade or calling, having for its purpose, first, the securing of a remuneration, in return for a service, sufficiently adequate to satisfy their idea of a human standard of living."

He traced the rise of pseudo-labour organizations, motivated by "impatient" action and sometimes abetted by "political adventurers." One reason for the rise of some of the "isms" which "spring up in the name of labour and cause much annoyance" he attributed to "the unfair and unreasonable opposition to the moderate desires of organized workers and the refusal of some industrial leaders to recognize trade unions in which their employees may be organized." To the argument of such employers that they will brook no interference with "my" business, the speaker answered that it was not solely the employer's business, that the employer "is only the trustee"; that the "trade union in attempting to arrive at a satisfactory understanding with an employer of labour on wage rates is no more interfering with business than is the salesman of necessary raw material, when he dickers for a price for that raw material"; and that "business enterprise now-a-days is conducted on finances secured from the public at large and does not belong to any particular individual. . . ."

International Trends

Dealing with the international character "of the dominant labour organization in Canada," the speaker considered that there "is really nothing unusual in international affiliations," declaring that "there is no activity in Canada of any magnitude in industrial, financial or social life which has not international characteristics."

He further developed this contention as follows:—

"Conditions of labour determine, in many cases, whether industrialists will operate in a foreign country or not. There are cases where the wages, hours of labour and other conditions of employment in Canada are predicated on the wages, hours of labour and other conditions of employment existing in the United States. For many years the conditions mentioned above applied when labour agreements were being negotiated on Canadian railroads and the rise and fall of wages, etc., in the United States definitely determined the course pursued in such matter on Canadian railroads. . . .

"Through international affiliations workers are in possession of knowledge which assists them to create a condition which maintains a living standard sufficiently large to enable them to maintain a standard of citizenship which is a credit to them; to prevent the importation of commodities with a labour content so low that to meet the competition we have to pauperize ourselves and be able only to provide ourselves with a purchasing power insufficient to in any way develop any of our own national resources. . . .

"Capital flows across the imaginary boundary line in both directions with a mobility and fluidity truly remarkable. A great number of our industrial establishments are financed from across that line, and with a great number of our industrial establishments but branch houses of United States concerns, it is a natural development that there should be an international labour movement. In a great many cases our employers are international concerns. . . ."

Securing of Legislation

Emphasizing that decent standards of living (which can be obtained through international action) must be supplemented by security measures which lie solely within the national legislative sphere, the speaker stated:—

"In order to solve this problem it was necessary to create a body whose sole objective was the securing of legislation designed to protect the interests of the workers. Such a body would, necessarily, have to be national in character because it would deal with legislative bodies within Canada. The body created is the Trades and Labour Congress of Canada. This Congress is the creation of the international trade union movement and is part of it. Desires for legislation usually spring from the minds of the worker expressed in his immediate local union and crystallized in the conventions of the Trades and Labour Congress of Canada and so presented to the proper authorities."

Function of Labour Organization

Mr. Isador Lubin, United States Commissioner of Labor Statistics, first dealt extensively with the United States economic situation and living standards and the paramount need of increasing purchasing power, on a balanced basis between agricultural and industrial producers.

Stating that Labour Organizations had been in the past, and would still continue to be, one of the most important factors in such development he claimed that while labour had now been given the legal right to organize for bargaining purposes in United States, labour organization was yet to be actually incorporated in American industrial life.

Up to now in many industries, labour's efforts had been dissipated in a fight for union existence. When unionism was accepted as a fact, it could devote all its energy to promoting efficiency for the joint benefit of employer and employees.

The New Unionism

With reference to recent developments culminating in the campaign by the C.I.O. of intensified union activity, Miss Mary Van Kleeck, Director of Industrial Studies, Russell Sage Foundation, declared that the new unionism is neither a personal feud nor the creature of a dictator, nor a radical political program. She considered that the new industrial unionism was a belated reaction to mass production and insecurity arising from technological change and recurrent depression and that the impulse towards organization in the United States came with the National Industrial Recovery Act at a moment when Government was called upon to assume new responsibilities both for business and for labour.

"The structure of the new movement," she asserted, "was a combination of international organization within industries following the international organizations of business itself.

"There seems to be no good reason why American capital invested in Canadian industry should be free to exploit labour here and to lower Canadian standards of living."

"Canadian workers are independent in all national action but they may rely upon international support and will give it when dealing with an international employer," she said. "The new forces merely base the international unit on industrial unionism."

Miss Van Kleeck suggested these new developments in labour organization had to be considered as an increasingly important factor in Canadian-American affairs. It was 80 years since North American trade unions were organized internationally.

"The new industrial unionism with its emphasis on the common interests of all workers will strengthen the basis for common action in the fundamental question of the North American problem, namely, overcoming economic depressions and establishing higher standards of living."

Other Phases Discussed

That "narrow nationalist sentiments were being exploited" in combatting the extension of the Committee for Industrial Organization was charged by Professor F. R. Scott, of McGill University in his contribution to the discussion. He further maintained that good wages and working conditions did not take the place of trade unions. Economic democracy was essential if political democracy was to continue. The labour movement was essentially a democratizing process.

Professor H. A. Logan, University of Western Ontario, questioned whether union internationalism was a parallel of capital investments. He suggested control by American employers over the Canadian scene was a more vital factor. While recognizing the effectiveness of Canadian unions in some instances, he doubted their financial strength to sustain a long fight such as the recent London, Ont., printers' strike.

Professor M. D. Steever, Lafayette College, believed the legal profession to which he belonged had failed in their capacity as officers of the courts to develop any labour concepts in the common law.

President W. W. Atwood, Clark University, advocated the breakdown of industry from its centralized state to smaller centres as a prime means of preserving democracy.

Professor Norman McKenzie dealt briefly with the efforts of the I.L.O. to establish a number of International minimum labour standards and asked if the U.S.A. being subject to similar constitutional difficulties as Canada in giving effect to these International Conventions had yet found any way of surmounting these constitutional difficulties.

To this inquiry Mr. Lubin explained some recent decisions of the Supreme Court, which in the opinion of high authorities, had opened the way for such conventions (adopted subsequent to the U.S.A. joining the I.L.O.) to be dealt with on a federal basis.

At a convention of the Canadian Federation of Business and Professional Women's Clubs held recently in Niagara Falls, Mrs. Leonard Marsh stated that Canadian housewives spend $12,000,000 weekly on groceries. Discussing the development of the co-operative movement in Denmark and Sweden, Mrs. Marsh urged co-operative buying by Canadian women.

LABOUR AND INDUSTRY IN ONTARIO IN 1936

Seventeenth Report of Provincial Department of Labour

THE seventeenth report of the Ontario Department of Labour reviews the administration of the various acts under its jurisdiction during the fiscal year 1935-36.

The report deals in detail with the administration of the following branches of the provincial Department of Labour; the Ontario Government offices of the Employment Service of Canada; Private Employment Agencies; the Board of Examiners of Operating Engineers; the Boiler Inspection Branch; the Factory Inspection Branch; Apprenticeship Board; the Minimum Wage Board, and the Industrial Standards Act.

Employment Conditions.—Reviewing industrial conditions in the province, the Deputy Minister states that employment conditions showed continued improvement in Ontario during the fiscal year reviewed. In twelve of the thirteen divisions of industry advances in employment were reported, the most notable being in logging, iron and steel, and in the mining industry. These advances ranged from 11 to 30 points, it is stated, however, that this improvement was largely offset by a substantial decrease in the volume of employment in the construction industry.

Improvement in employment conditions was further indicated by the decrease in the percentage of unemployment reported among trade union members, the average for the fiscal year being 13·0 as compared with 17·4 for the previous year, a decline of 4·4 points.

Employment Service.—During the fiscal year 140,265 placements were made by the Ontario Government offices of the Employment Service of Canada. Compared with the previous fiscal year, this was a decrease, due largely, it is stated, to the reduction made by municipalities in their programs of unemployment relief work during the past year. During the year reviewed by the report, there were 149,043 vacancies reported to the offices, approximately 95 per cent of which were filled and 326,857 applications were made for work.

The special service rendered handicapped ex-service men in co-operation with the Federal Department of Labour resulted in the placement of 1,750. During the winter months approximately 3,000 men were placed with the White River-Schreiber section of the Trans-Canada highway, the report states.

Private Employment Agencies.—During the period reviewed, only four licensed private employment agencies transacted business, 2,061 placements being reported to the department.

Factory Inspection.—Indicative of steadily improving business conditions, the report of the Chief Inspector of the Factory Inspection Branch states that there was an increase of one hundred in the number of overtime permits issued, many firms resorting to overtime in order to take care of seasonal rush orders which could not be handled in regular hours.

A total of 22,244 inspections were made by the inspectors, and 6,629 orders were issued during the year. Accidents reported to the Factory Inspection Branch numbered 3,037, of which 25 were fatal as compared with 32 in 1934. The permits issued numbered 3,009, chief among which were 2,175 for overtime, 53 in connection with work in bakeshops, 153 for double shift for female workers, and 606 for homeworkers.

By an amendment to the Factory, Shop and Office Building Act, homeworkers throughout the province were brought under the supervision of the Factory Inspection Branch, both the homeworkers and the employers giving out homework being required to obtain permits. The amendment also provides that the wages paid must not be less than those established by the Minimum Wage Board for such employment.

The Chief Inspector states in his report that "it is gratifying to find that child labour is practically non-existent in industry throughout the province and the inspectors are careful in checking up any doubtful cases, insisting on birth certificates being produced."

Referring to complaints investigated, the Chief Inspector states that the majority of complaints "were in connection with hours of labour and to a large extent concerned male employees in factories and shops. While there is no legal control of hours of men, except in bakeshops, under the Factory, Shop and Office Building Act, nevertheless the inspectors in many instances were successful in having reductions made in the daily number of hours where these were shown to be excessive."

The amount of industrial building was slightly less during the period reviewed compared with 1934, amounting to $6,238,850 as against $6,426,000 in 1934.

Referring to industrial diseases, the Chief Inspector considered that "special mention should be made of the increase in the number of persons suffering from industrial diseases, a total of 41, of which two proved fatal. Lead poisoning, dermatitis and silicosis were the chief of these diseases."

Proceedings were taken against four firms, two under section 30 of the Factory, Shop and Office Building Act, regarding hours of employment, one under section 71 pertaining to hours in bakeshops, and one under section 58 regarding boiler inspection, convictions being recorded in all cases.

Boiler Inspection.—During the fiscal year 302 drawings and specifications of boilers, air receivers and other pressure vessels to be constructed for use in the province were surveyed and registered in the Boiler Inspection Branch, as compared with 289 in 1934. Of new boilers and other pressure vessels, 463 first, 315 second and 459 final inspections were made. The number of inspections of used boilers and other pressure vessels, including 279 annual inspections totalled 930. During the year 2,286 certificates were issued as compared with 2,004 in 1934 and the sum of $13,534.14 was transmitted to the Treasurer of Ontario.

Board of Examiners of Operating Engineers.—The Board of Examiners reported that 16,451 certificates were issued, an increase of 201. The number of candidates for certificates (1,676) also showed an increase of 190 as compared with the fiscal year 1934. The net revenue of the board during the fiscal year reviewed was $24,921, an increase of $399.22.

Industrial Disputes.—During the period reviewed there were 50 industrial disputes reported in Ontario in which 9,120 workers were involved in a time loss of 78,511 working days.

Apprenticeship Act.—The Director of Apprenticeship in reviewing the activities of the Apprenticeship Board states: "A distinct revival in activities under the Apprenticeship Act has taken place during the past year and the outlook for further development in the immediate future is brighter than at any time during the seven-year period since the Act became effective. Several new trades and industries are conferring with the Director of Apprenticeship with a view to taking advantage of the provisions of the Act. The motor vehicle repair industry has been added to the designated list and steps are being taken to reorganize and revive dormant activities in connection with the building trades."

A total of 1,806 apprentices were registered in various trades during the fiscal year ending March 31, 1936. Of these, 1,042 successfully completed their full period of training and received diplomas; 337 had their contracts cancelled for various reasons; and 330 were still being trained on March 31, 1936. The trades concerned included: bricklaying, masonry, carpentry, painting and decorating, plastering, plumbing, steamfitting, sheet metal work, and electrical work.

Minimum Wages in Ontario 1935-36

The work of the Minimum Wage Board during the fiscal year ending March 31, 1936, was divided into two departments dealing with minimum wages for female employees and standard wages and hours for designated trades and industries. The first division deals with the administration of the Minimum Wage Act, while the second division covers all activities of the board in connection with the enforcement of schedules under the Industrial Standards Act.

Several amendments were made to the Minimum Wage Act. These were made to conform with administrative changes and to enable the board to control abuses and evasions of the Act through payment of wages by scrip, notes, goods, etc., and through refunds to employers, particularly after action has been taken by the board to collect arrears. The policy of the board has always been to arrange settlement of claims out of court except where there is repeated or deliberate violation, but in some cases it has been very difficult to collect full payments from employers after the agreement has been made. The new section of the Act gives such settlements the full force of law and provides a simple and effective method of collecting without cost to the employee.

The report states that no orders affecting additional occupations or industries were issued during the fiscal year under review, but several orders were reprinted in new form, different orders affecting the same industry or class of employment were consolidated and amendments were made to orders affecting female employees in telephone systems (LABOUR GAZETTE, October, 1935, page 901).

Complaints.—During the twelve months period from April 1, 1935, to March 31, 1936, the report states that complaints were received by the board from 887 persons in connection with alleged underpayments of female employees or other violations of the Act and orders. This number includes only those complaints which investigation showed to be based on fact or where situations were revealed requiring the attention of the board. The board reports that many other complaints, chiefly anonymous, were received which proved to be groundless.

Wage Returns.—During the fiscal year, wage returns were received from 9,162 employers reporting the wages of 105,840 female employees. In addition to the regular collection of wage sheets, the Board sends for special returns where complaints are received and where it is probable that violations may be found, as for example, in new establishments

or in plants where adjustments have been ordered and no recent check-up made. Such wage returns give particulars regarding names, wage rates, earnings, hours of employment, etc., for every female employee. These returns are carefully checked and the information compiled in tabulated form for the guidance of the Board.

Adjustments.—Analysis of wage returns during 1935-36 revealed necessary adjustments or underpayments in 1,166 establishments affecting 2,604 employees. In each case the employer was ordered to immediately adjust the hours or wage rates and in those cases where previous adjustments had been ordered and where excessive underpayments were revealed, steps were taken by the Board to collect arrears owing to the employees.

Arrears of Wages.—The total amount of arrears collected during the year, as a result of complaints, adjustments and court actions was $29,778.86 which was collected from 593 employers. The report states that this amount is approximately $22,000 less than was collected during the fiscal year ending October 31, 1934, and represents a proportional reduction in the number of employees although the reduction in the number of employers was only 71 or about 10 per cent. These reductions are largely accounted for by the fact that most of the employers from whom arrears were collected previously are now paying minimum wages.

Court Actions.—During the year, 46 prosecutions were undertaken by the Board. Of these 29 were withdrawn from court before trial because settlements were made satisfactory to the Board and all concerned. The magistrate dismissed three cases for lack of sufficient evidence and in three other cases the employers were ordered to pay arrears but no fines were imposed. Fines totalling $460 were imposed in 11 cases, in all of which arrears were ordered paid to employees.

Permits.—The Board is empowered to establish wages lower than the prescribed minimum for handicapped and aged workers. Persons over sixty years of age are classified as aged for this purpose and any worker who through physical or mental disability is incapable of successfully competing with normal workers may be granted a special permit. In all cases written application for permits must be sent to the Board, signed by both the employer and employee. It is not the practice of the Board to grant permits because a worker is slow or incompetent or because the employer finds it difficult to pay the required wages.

Permits are issued covering periods of from three to twelve months but in the cases of age and permanent handicap are renewed on application without further investigation.

Permits in force throughout the Province on April 1, 1936, only totalled 125.

Administrative Problems.—Referring to the administrative problems involved in the enforcement of Orders of the Board the chairman states that "difficulties have arisen in connection with the enforcement of orders in unincorporated urban and industrial sections of townships. Existing orders provide minimum rates according to population for cities, towns and villages but due to an oversight, no provision has been made for industrial sections of townships adjacent to large cities or in connection with mining developments and which are not incorporated as separate municipalities. Orders are being amended to correct this deficiency.

"The increasing practice or habit of girls and women accepting employment at whatever wages may be provided or knowingly offering to work for less than the minimum rates and later, when difficulties arise, complaining to the Minimum Wage Board and demanding the collection of arrears, is causing considerable difficulty and may lead to reductions in the rates or to amendments which would be detrimental to the interests of employees and which would further increase the difficulties of administration." . . .

"As previously indicated, one of the chief difficulties in enforcing minimum wage rates, particularly in small retail establishments, offices and establishments rendering personal services, is to secure adequate, accurate records of wages and hours. A special effort has been made during the past year to educate employers in connection with the necessity of protecting themselves in this respect, but it appears that drastic action is necessary and the Board intends to revise regulations and take action against persistent offenders". . .

"Another difficulty arises in connection with part-time and occasional workers who are notified to report for possible employment during rush hours or busy periods and who are frequently kept waiting for hours before being hired or sent home without work or pay after a long waiting period. Many of these workers are required to wait a week or more until the regular pay day before receiving their wages, and in some cases the carfare and expenses are equal to the money received. This practice is increasing and the Board is considering amendments to existing orders whereby such workers must be paid at hourly rates in excess of the regular rate for experienced workers and be guaranteed at least three hours' pay on each occasion of employment."

Concluding the section dealing with the administration of the Minimum Wage Act the chairman states that "despite increasing difficulties of administration and continued economic depression resulting in lowered wage rates which in many cases are reduced to the legal minimum for all except highly skilled workers or exceptionally fast pieceworkers it can safely be said that the Minimum Wage

Act in Ontario is being more rigidly enforced than ever before and that employers as a whole are in agreement with the provisions of the Act. Some inequalities exist in the application of existing rates throughout the Province and many persons are still ignorant of the full requirements of the law but the need for such legislation was never more apparent."

Industrial Standards Act

Presenting his report concerning the administration of the Industrial Standards Act of Ontario (LABOUR GAZETTE, June, 1935, page 534) the chairman states that section 6 of the Act provides that "the Minimum Wage Board shall have authority to enforce the provisions of this Act and of the regulations and schedules." The Board is also authorized to make inspections and to collect from employers all necessary information regarding wages, hours and records.

The report states that at the close of the fiscal year 1935-36 there were 35 schedules in effect, governing wages and hours in seven different industries, including eleven building trades.

Public Inquiries.—Where violations exist, regarding which there is not sufficient evidence to justify collection of arrears or prosecution, and where the offence is of a minor nature and appears to be widespread, it is the policy of the board to arrange for a public inquiry at which witnesses are examined under oath and an effort is made to secure the co-operation of offending persons or to obtain data and evidence which will enable the Board to deal more effectively with such offences in future. Six inquiries of this nature were held during the past year.

Prosecutions.—Sixty-two prosecutions were launched during the year which resulted in 36 convictions, 16 cases dismissed and 10 charges being withdrawn for various reasons. The total fines imposed in connection with the 36 convictions amounted to $378, and a total of $159.05 was ordered to be paid to the treasury of Ontario as arrears owing to employees who because of collusion with the employers were barred from receiving arrears owing them.

Collection of Arrears.—In addition to the arrears of wages collected for employees through court action which amounted to $341.11, a sum of $446.73 was collected through direct action on the part of advisory boards and the Minimum Wage Board. The total amount of $946.89 arrears of wages was collected from 30 employers in various trades and industries on behalf of 45 employees.

In many cases adjustments in wage rates were made as a result of investigations and interviews resulting from complaints. The wage reports submitted to the Minimum Wage Board show that many employers increased wages immediately on receiving notice of the schedule rates. The report states that it is impossible to estimate the amount by which wages have been increased as a result of the operation of the schedules but wage levels have undoubtedly been raised and the general effect of a schedule is to establish a wage level which approximates wages paid in the higher wage grade shops.

NEW METHOD OF ASSESSMENT RATING BY ONTARIO WORKMEN'S COMPENSATION BOARD

In issuing its table of provisional assessment rates for 1937, the Ontario Workmen's Compensation Board announces a new method of rating which is expected to apportion more adequately the accident cost to employers based on individual experience.

The following paragraphs extracted from the Board's bulletin detail the method of rating:—

The function of rates is to provide a fund for the payment of compensation and other costs of accidents in the industries in Schedule 1 of the Act. While the Accident Fund is one and indivisible and the liability rests upon all industry collectively, yet for the purpose of assessment and compensation industries under Schedule 1 of the Act are divided into classes, twenty-four in all. The classes are numbered from 1 to 24. Each class contains one or more groups, all of which are also numbered.

A separate account is kept by the Board for each of the classes and for each of the groups in each class, and into that account are entered all assessments received and all compensations and medical aid awarded. Broadly speaking, therefore, each of the 24 classes of industry is thus in effect a mutual insurance association of the employers in that class, but there is provided a Disaster Reserve to meet the case of a very severe disaster occurring in any one class more than the class alone could well sustain, and in such cases the Disaster Reserve comes to the aid of the unfortunate class.

At the beginning of each year each employer is required to send the Board an estimate of his probable payroll for that year, and upon the payrolls so received assessment is made. The first assessment is made by the application to the payrolls of a provisional rate. At the end of the year the actual

amounts of the payrolls are ascertained and the final rates struck and that (adjusted) rate applied. If necessary the provisional rate is altered to meet the requirements of the year.

This year a method of assessment has been adopted which is somewhat new. For the purpose of fixing the rate of assessment on each group and class a study has been made of the experience of the past ten years and from that experience has been computed a rate for each class and for each group which rate, if applied to the total of the ten years' payrolls in each class and group, would have met the accident and other costs upon each class and group, and upon this experience rate the actual rate for the year is based. In addition to the experience rate, provision requires to be made for the costs of administration, the costs of accident prevention associations where the class has such an association, and a small provision for contingencies.

In fixing the rate consideration has to be given also to the present financial position of the class or group—has it a deficit or has it a surplus? Upon a consideration of all these the adjusted rate for 1936 has been fixed and the provisional rate set for 1937.

At the suggestion of a large number of employers a method of rating has been adopted which takes into account to a small extent the individual experience of the employers covered by the Act. The system is applied as follows:—

(1) Each employer whose cost ratio experience for the next proximate adjusted year shall be ·60 or less shall pay the preferred rate;

(2) Employers with other cost ratio experience for the next proximate adjusted year shall, for each ·03 cost ratio or part thereof above ·60, pay an additional 2 per cent of the preferred rate, but the total rate to be charged in any one instance shall not exceed 200 per cent of the preferred rate;

(3) The firms as numbered and dealt with by The Workmen's Compensation Board are taken as units for differential assessment, so that each numbered firm shall have applied to it the provisions of paragraph 2 above;

(4) The cost arising out of pneumoconiosis (including silicosis) cases shall not be included in cost ratios in this plan.

For the year 1937 "the next proximate adjusted year" is 1935, with the result that a firm with a bad accident experience in the year 1935 may have its adjusted rate doubled for 1936, and the increased rate on such firm will be applicable to reduce the rate paid by those firms having a good experience. Each year is treated separately, without consideration for former years' cost experience.

The result of the application of this scheme is that the preferred (adjusted) rate is somewhat lower than the average cost rate above referred to, and that preferred (adjusted) rate appears hereafter as the adjusted rate for 1936, and according to that rate so set the total amount of assessments to each employer will be fixed for that year.

It is hoped that the new method of rating will (1) so stabilize the rates that they will no longer fluctuate violently; (2) place on each employer some portion of the burden on his own bad experience; and (3) reward to some extent those employers who in each year have a favourable accident experience.

ANNUAL REPORT OF MANITOBA BUREAU OF LABOUR

THE annual report of the Bureau of Labour and Fire Prevention of the Department of Labour of Manitoba reviews administrative operations for the fiscal year May 1, 1935, to April 30, 1936. This report has been published in previous years by the Manitoba Department of Public Works. In 1931, the Legislature of Manitoba adopted the Department of Labour Act which came into effect on July 6, 1934. The present report is therefore the second published by the Department of Labour, which is responsible for the administration of the following enactments: The Bureau of Labour Act; the Manitoba Factories Act; the Bake Shops Act; the Shops Regulation Act; the Minimum Wage Act; The Elevator and Hoist Act; the Steam Boiler and Pressure Vessel Act; The Building Trades Protection Act; The Fair Wage Act; The Electricians License Act; The Public Amusements Act (The licensing of Cinema Projectionists); The One Day of Rest in Seven Act; The Fires Prevention Act.

The administration of the above Acts involved considerable inspection service and the number of inspections and orders issued in respect of each Act are summarized in tabular statistics given in the report. During the fiscal year 1935-36, there was a total of 16,311 inspections made and 6,078 orders issued as compared with 15,571 inspections and 6,175 orders in the previous orders.

In the accompanying table, the number of inspections and orders under each Act during the year are summarized:

SUMMARY OF INSPECTIONS MADE AND ORDERS ISSUED BY THE BUREAU OF LABOUR FROM MAY 1, 1935, TO APRIL 30, 1936.

Statute	Number of Inspections	Number of Orders
The Manitoba Factories Act	879	589
The Bake Shops Act	27	18
The Minimum Wage Act	4,047	1,405
The Elevator and Hoist Act	4,642	1,589
The Steam Boiler and Pressure Vessel Act	4,015	1,436
The Building Trades Protection Act	1,020	344
The Public Buildings Act	143	159
The Electricians License Act	267	49
The Public Amusements Act (re the licensing of Cinema projectionists)	256	96
The Fires Protection Act	659	338
The One Day of Rest in Seven Act	148	39
The Fair Wage Act	208	16
Total	16,311	6,078

Accident Prevention.—In June, 1935, the Department of Labour established an Accident Prevention Branch under the direction of one of the Bureau of Labour's officials. The duties of this Branch are to promote the prevention of accidents by education or other suitable means; to co-ordinate those public bodies which have been active in this work throughout the province, and to collect reliable accident statistics which will be available for comparative and educational purposes. During the fiscal year, the report adds that the effort to co-ordinate the various Safety Committees and other agencies has been singularly successful.

One of the safety activities of this Branch was the operation of a Safety Lane for the purpose of testing cars. Such tests were carried out in Winnipeg, Brandon, Dauphin and Portage La Prairie. In all, 4,967 cars were tested in the Safety Lane. Of these, 2,953 cars failed to pass, 1,014 were re-checked and found satisfactory and 1,000 passed the test. Other tests were carried out in authorized garages in Winnipeg, the total number of cars being tested by both methods was 5,991, of which 3,369 failed to pass the test.

Another activity of this organization was the distribution of safety films which were shown during the year to 48,403 persons.

Accident statistics from May 1, 1935, to April 30, 1936, indicated that 1,264 injuries and 51 fatalities resulted from traffic accidents. Industrial accidents accounted for 1,260 injuries and 23 fatalities. Accidents taking place in homes were the cause of 78 injuries and 38 fatalities. General accidents resulted in 174 injuries and 94 fatalities. Total deaths from all causes numbered 206, and total injuries from all causes 2,776.

Steam Boilers Act.—A total of 4,015 inspections were made of high pressure boilers, heating boilers, threshing engine boilers, compressed air tanks and refrigeration plants. The fees received for these inspections during the year amounted to $11,898.35.

The Steam Engineers Board of Examiners issued a total of 1,242 certificates and renewals to engineers during the year, the fees for which totalled $2,583.90.

Fair Wage Act.—The Fair Wage Board held 30 meetings during the fiscal year in connection with the revision of schedules. There were 208 inspections made and 16 orders issued. Sixty-seven wage claims were adjusted involving the collection of $4,371.01.

Licensing of Workmen.—The Board of Examiners under the Electricians License Act issued 222 licences and 83 contractors' certificates during the year, and collected $2,660 in fees. Twenty-five candidates tried examinations to qualify as cinema projectionists, 17 of whom were successful. Fees collected for examinations, licenses and apprentice licenses amounted to $530. License fees collected from dry cleaning establishments totalled $737, compared with $528.75 in the preceding year.

General Complaints.—During the fiscal year reviewed by the report 540 complaints under the several Acts administered by the Bureau, were received and adjusted. These were as follows: Minimum Wage Act, 514; The Steam Boiler and Pressure Vessel Act, 8; The Electricians License Act, 14; The One Day Rest in Seven Act, 4.

Minimum Wage Act

Included in the annual report of the Manitoba Bureau of Labour covering the fiscal year May 1, 1935, to April 30, 1936, is the report of the Minimum Wage Board. During the year, 39 meetings of the Board were held and many regulations were revised. (These have been reviewed in various issues of the LABOUR GAZETTE).

During the year, 18 investigations were instituted by the Bureau of Labour concerning the following occupations: Laundries, dyeing and cleaning establishments (6); hotels, restaurants (3); boys under 18 years of age in manufacturing industries (5) and general employees (4). In seven of the eighteen cases convictions were registered and fines imposed. Stay of proceedings was entered in 8 other cases; summons could not be served in another two cases, as the place of business was closed out and the remaining case was withdrawn. In addition to these cases, 403 claims for wages were adjusted and collections effected. Of these, 166 were claims of female employees, while 237 were wage claims of male employees. The total amount collected on these wage adjustments for men and women was $8,680.29.

The number of inspections in Winnipeg under all the regulations governing employment of female workers totalled 1,468. These resulted in 201 orders respecting hours, 246 respecting wages, 181 other regulations and 1 regarding conditions of work. Outside of Winnipeg, there were 194 inspections made and 109 orders were issued.

In addition to the foregoing, there were 2,311 inspections carried out throughout the province under regulations governing male employees. These resulted in 668 orders respecting conditions of work, hours or wages.

YOUTH TRAINING IN MANITOBA

Details of Program as Provided in Agreement with Dominion

THE Dominion Government has approved a joint-program with the Province of Manitoba for youth training and reconditioning projects. This is the first agreement with any of the Provinces in connection with allocation of the $1,000,000 voted by Parliament at its last session for projects of this nature. (LABOUR GAZETTE, April, 1937, page 414.) Agreements with other Provinces are being negotiated, and will be announced as they are completed. The details of the agreement as announced on July 3 by the Hon. Norman McL. Rogers, Minister of Labour, are given in the following paragraphs:—

The agreement with Manitoba provides for a maximum contribution of $100,000 by the Dominion (on a dollar-for-dollar basis) and the Province has thus far submitted projects which will absorb a substantial portion of this amount. Other proposals which will utilize all or part of the remainder are expected. The agreement expires with the close of the fiscal year on March 31st next.

Specific projects which have been approved are:—

(1) Forest conservation and improvement work training in the provincial forest reserves, designed to provide technical and practical courses in forestry work for unemployed young men;
(2) Short term learnership courses in industry with related technical instruction for unemployed young men and women;
(3) Assistance in the operation of a domestic training school in Winnipeg for unemployed young women;
(4) Assistance toward operation in Manitoba of a specialized employment and placement service for women.

All four projects were submitted by the Province and after examination by the National Employment Commission approved by the Dominion. It is anticipated that from 800 to 1,000 young men and women over 18 and under 30 years of age will benefit directly from these projects. The agreement is, of course, designed solely for necessitous unemployed young people between the ages mentioned. If considered advisable in certain special cases the Dominion Minister of Labour may, on recommendation of the Supervisor of Youth Training Projects, extend the age limit in either direction.

It is stipulated in the agreement that selection of the unemployed young people who are to participate in projects authorized under it shall rest with the Province subject to approval by the Dominion Department of Labour. Selections must be made, however, "without discrimination or favour in relation to the racial origin, religious views or political affiliations of those eligible for selection, with preference given, so far as practicable, to those who are in greatest need or have been longest unemployed."

Speaking generally, the maximum number of hours per day and per week to be worked by any employee on projects under the agreement are restricted to eight and forty-four respectively. In the discretion of the Province these may be exceeded provided that in no instance an employee may work in excess of an average of forty-eight hours a week for three consecutive weeks. The Province undertakes to see that all persons employed on projects under the agreement are paid in accordance with provincial Fair Wage rates. Provincial costs of administration will be borne by the Province.

Where necessary the Province will arrange for or conduct boarding camps suitable for those employed on the project. A free clothing bonus of $5 each will be granted to those who remain on the project until termination of the work or who after 30 days on the project leave for certified employment. Physical fitness is necessary. Class instruction of at least four hours a week at regular rates of pay will be given.

Under the learnership project the Province hopes to give a number of unemployed young men and women short term courses in various branches of industry with related technical instruction. Courses will be for a definite length of time but will not exceed 12 months. The Dominion contribution is to be towards the cost of technical instruction. Placing of learners in any industry must not, it is provided, displace regular employees. Supervision will be in the hands of the Provincial Minimum Wage Board.

Operation of a domestic training school for unemployed young women in Winnipeg is provided for under the third project submitted by Manitoba, and approved. Interested local organizations will raise such financial support as they can for this project. Administration

expenses will be borne by the Province, the city and the local organizations as may be arranged between them. The balance of the expenditures incurred will be paid 40 per cent by the Dominion, 40 per cent by the Province, and the remaining 20 per cent by the city.

The agreement provides for operation in Manitoba during its term of a specialized employment and placement service for women. It will be operated in connection with the Employment Service of Canada. This will be in charge of qualified women and designed for the registration, vocational guidance and placement of unemployed young women in and for specialized work. Suitable office quarters will be provided by the Province. No fee will be charged any unemployed young people for services provided them by the bureau.

Wages and Hours in the Printing Trades in U.S.A.

"Union Scales of Wages and Hours in the Printing Trades," is the title of a bulletin (No. 631) issued recently by the Bureau of Labour Statistics of the United States Department of Labour.

The Bureau of Labour Statistics has made surveys of union wage rates and hours in a number of time-work trades each year since 1907. Previously the reports on all the trades covered were incorporated in one general bulletin; however the Bureau is now issuing separate reports on the 1936 survey, that on the building trades having been recently issued as Bulletin No. 626.

In a preface to the report on the printing trade, Isador Lubin, Commissioner of Labour Statistics, states that "because of the prevalence of union agreements in the printing trades, union rates in the cities covered in these surveys are an important indication of wage and hour trends in the printing trades throughout the country."

Summarizing conditions in the printing trades the report states:

"There has been an increase of slightly more than 3 per cent in the index of hour wage rates from 1929 to 1936 in the printing trades in both the book and job and newspaper sections. In the book and job printing trades, the 1936 index was 8 per cent higher than the low point in 1933, and 3 per cent higher than in 1935. The 1936 index in the newspaper printing trades was 9 per cent higher than in 1933, and 1½ per cent higher than in 1935.

"The 1936 average hour rate for the book and job printing trades was $1·094, in the newspaper trades, $1·258. The higher rates in the newspaper-printing trades are principally due to two factors; the greater prevalence of night work for which higher rates are paid, and the absence of such trades as press assistants and feeders and bindery workers which have lower rates. Thus the average rate for day work in the newspaper-printing trades was $1·19 while that of night work was $1·342. The rates for bindery women averaged $0·520 which was less than half the average for all trades in the book and job section.

"Previous to 1921 the average number of hours per week in the book and job printing trades was considerably more than in the newspaper trades. In 1907, for instance, the average hours in the book and job section was over 54 per week and in the newspaper-printing trades about 46 hours per week. Average hours steadily declined in the book and job printing trades until 1921. Since then there has been little variation in the average work week between the two branches of the industry. In both sections hours have declined considerably since 1932. In 1936 the average hours per week in the book and job printing trades was 40 hours, and in the newspaper trades it was 39·1 hours."

Working Hours for Juveniles in Great Britain

The hours of work of juveniles in factories in Great Britain were further limited by an additional clause to the recent factory legislation (LABOUR GAZETTE, March, page 320). The new clause provides that the hours of work of persons under 16 in factories, exclusive of intervals for meals, and rest, shall not exceed 44. Further, if representations are made that the industry is so dependent on the employment of such young persons that it would be seriously prejudiced, that increased hours would not be likely to be injurious to health, and that the work was particularly suitable for young persons, and likely to lead to their permanent employment, the Home Secretary might direct an inquiry and might make regulations increasing the total hours to a figure not exceeding 48.

Messrs. A. E. Ottewell, Daniel Powers and Clayton Adams have been appointed a Commission to inquire into the hours of work and conditions of labour of persons employed in the meat packing industry and the laundry industry in the city of Edmonton.

LABOUR LEGISLATION IN QUEBEC IN 1937

THE Quebec Legislature which was in session from February 24 to May 27, 1937, enacted new laws dealing with collective agreements, minimum wages, employment of children, vocational education, pensions for the blind, and mothers' allowances. Amendments were made in statutes relating to workmen's compensation, unemployment relief, old age pensions and the regulation of mines.

Workmen's Wages Act

An Act respecting Workmen's Wages provides for the extension of collective agreements voluntarily arrived at by organizations of workers and employers to cover all workers and employers in the industries concerned. The Fair Wage Act is designed as a complementary measure to provide for the fixing of wages and hours for such workers as are not covered by a collective agreement under the Workmen's Wages Act. It does not apply, however, to farm labourers or to domestic servants.

At the end of 1936, a special committee was appointed by the Minister of Labour of Quebec to consider amendments in the Collective Labour Agreements Extension Act, 1934. The committee held sittings in a number of industrial centres to hear suggestions from representatives of employers' and workers' organizations. The report of the committee was submitted to the Minister before the Legislature opened and the Bill entitled an Act respecting Workmen's Wages embodied recommendations made by the committee. With amendments made by the Legislative Assembly and the Council, the Act was passed to come into effect on the day it was assented to, May 27.

The Workmen's Wages Act repeals the Collective Labour Agreements Extension Act but stipulates that the regulations and agreements made under the earlier statute shall remain in effect until the end of the period for which they were adopted and that the joint committees of employers and employees set up under the repealed Act may continue to function under the new law.

Like the former Act, the Workmen's Wages Act enables the Lieutenant-Governor in Council to declare a collective labour agreement binding upon all employers and employees in the same class of employment in the district covered by the Act. The wording of this section broadens its application somewhat. Under the old Act as amended, agreements which might be made legally binding related to any "trade, industry or business." The new statute covers agreements in "any trade, industry, commerce or occupation." It does not apply to the blind or to agriculturists who derive 50 per cent or more of their income from a farm or undertaking connected with agriculture which they develop themselves or through servants. Like its predecessor, the Act excludes railway companies subject to Dominion jurisdiction.

A collective agreement under the Act means an agreement respecting working conditions made by "the representatives of an association of employees," on the one hand, and, on the other, by the representatives of an association of employers, or by one or more employers. The term "association of employees" is defined as including "a professional syndicate, a union or federation of syndicates, a group of employees or employers, *bona fide* or possessing the status of a civil person, having as object the study, defence and development of the economic, social and moral interests of its members with respect for law and constituted authority."

As under the earlier statute, only those terms of an agreement which govern wages, hours of labour, apprenticeship and the proportion of apprentices that may be employed in an undertaking become directly obligatory when approved by the Lieutenant-Governor in Council. The new Act, however, provides that the order in council may make obligatory, with or without amendment, the provisions of the agreement respecting the classification of operations and determining the classes of employers and employees, and "also such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of this Act."

Certain legal decisions involving the Collective Labour Agreements Extension Act made it clear that agreements made binding under the Act could not be extended to apply to labour by a workman of the nature covered by the agreement if the workman was employed by an employer who was not regularly engaged in the industry for which the agreement was made. The Workmen's Wages Act uses the term "professional employer" to designate the employer engaged in the industry, such as a building contractor, as distinguished from the employer who hires one or more workmen for a particular job. The new Act applies to agreements respecting any "occupation" and stipulates that the order in council rendering an agreement obligatory "shall govern and rule any hire of work of the same nature or kind as that contemplated by an agreement in the region of the province determined by the decree."

Further, "whatever be the employer's occupation, it is forbidden to stipulate a remuneration equivalent to a wage below that fixed by the decree." However, an individual contract of employment which contains terms to the advantage of the workmen is to be valid, as before, unless the order in council expressly prohibits any variation from the terms of the agreement.

The publication of an order in council declaring an agreement binding in the Quebec Official Gazette is a bar to any action alleging the incapacity of the parties to the agreement, the invalid nature of the agreement or insufficiency of notices and in all respects publication is to be taken as establishing the legality of the procedure followed in extending an agreement.

As under the old Act, any party to a collective agreement may apply to the Lieutenant-Governor in Council through the Minister of Labour for an order in council extending the agreement so as to bind all the employers and employees concerned in the district. Notice of such petition must be published in the *Quebec Official Gazette* and also, the new Act provides, in two newspapers, one French and the other English. Thirty days are allowed for the filing of objections and the Minister may hold an inquiry into the matter. Thereafter, the Minister, if he considers that

> the provisions of the agreement have acquired a preponderant significance and importance for the establishing of conditions of labour, without serious inconvenience resulting from the competition of outside countries or the other provinces, may recommend the approval of the petition by the Lieutenant-Governor in Council with such changes as are deemed expedient and the passing of a decree for such purpose.

As before, local economic conditions are to be considered.

It may be provided in the order in council that workmen employed regularly for at least twelve months in the upkeep of religious and charitable institutions, hotels, lodging-houses, office buildings or buildings used for industrial purposes may be paid a lower rate than that fixed by the agreement. A somewhat similar section in the Collective Labour Agreements Extension Act did not apply to hotels, lodging-houses or office buildings.

An order in council approving an agreement is to come into force from the date on which it is gazetted. It may be repealed or, at the request of the parties to the agreement, it may be amended through the same procedure as laid down for its approval in the first instance.

As under the old Act, the parties to an agreement made obligatory must form a joint committee to supervise the carrying out of the agreement. A committee already in existence may act if the parties agree and the Order provides for it. The Minister may add to the committee such members not exceeding four as may be nominated by the employers and employees who are not parties to the agreement. Formerly, only two such members might be added. The committee is to make by-laws for its government and when these are approved by the Lieutenant-Governor in Council and gazetted, the committee is constituted a corporation with all the rights and privileges of such.

The powers of joint committees are extended under the new statute. As before, such a committee may check up the rates of wages and hours of labour and the observance of the conditions of the order in council as regards apprenticeship and other matters. A committee may continue to levy upon employers only or upon both employers and employees the amount necessary for carrying out the order but the mode and rate of the levy and the estimate of receipts and expenses must be approved by the Lieutenant-Governor in Council. The levy may not exceed one-half of one per cent of the employee's wages or of the employer's pay-roll. A quarterly report certified by a public accountant must be made to the Minister of Labour.

New provisions concerning the joint committees enable the Government to withdraw its approval of a levy at any time and to stipulate that in case of an artisan the levy shall be based upon the wage of the lowest paid employee. A committee is empowered to require employers engaged in the industry concerned to keep registers of their employees with their addresses, working hours, wages, and method and time of payment. It may also require employers to keep posted the scale of wages established by the order, to give information under oath and to deduct the employee's levy from wages.

Formerly, at the expiration of an agreement or in case it was not renewed, the balance of funds in the hands of the committee was to be paid to the Department of Labour which was to act as trustee. Under the new Act, after an order ceases to be in force and is not replaced the committee is to continue to exist and retain its powers for the accomplishment of the object for which it was formed. When a committee becomes extinct, its property is to be delivered to the Minister of Labour who may devote it to a similar work designated by the Lieutenant-Governor in Council.

A new provision authorizes a committee to grant certificates to persons who are physically or mentally handicapped so that they may be employed on conditions other than those set forth in the order. In case such a certificate

is refused, an appeal may be taken to the Minister of Labour.

As before, any person violating the wage conditions of an order must pay to the joint committee as liquidated damages an amount equal to 20 per cent of the difference between the wage fixed by the order and the wage actually paid. Further, the joint committee may now institute on behalf of a workman who has not taken action within one month after his wages were due or who fails to press his claim, any action in his favour arising out of an order without having to prove an assignment of claim and in spite of any renunciation of the claim by the workman. No employer may set up a cross claim by way of defence and the action must be dealt with summarily.

The former statute gave to the joint committees power to require by by-law that every workman in a municipality of 10,000 population who was within the scope of an order approving an agreement should have a certificate of competency. Like other by-laws of joint committees, it had to be approved by the Lieutenant-Governor in Council. The certificate might be issued by an association of employers or by a board of examiners which might be set up by the committee. The new Act lays down more detailed conditions regarding the certificates of competency. A committee may now require a certificate from workmen in towns of 5,000 or more and the by-law making such provision must be published in the *Quebec Official Gazette* after being approved by the Lieutenant-Governor in Council. The fee that may be charged by a board of examiners is reduced from $5 to $2 for a workman. For an apprentice it remains at $1. Workmen's certificates are permanent and apprentice's are valid for the period of their apprenticeship.

An association of employees may grant certificates of competency only if permitted to do so by the joint committee with the approval of the Government but an association has the right of appeal to the Government if the committee refuses to grant the association the privilege of issuing certificates. Monthly reports must be made by such an association to the joint committee showing the names and addresses of those members to whom certificates have been granted. A certificate is valid as long as the holder is a member of the association.

In municipalities where certificates are compulsory, no employer may hire a workman within the scope of an agreement who does not hold a certificate and no workman may carry on his trade without one. Further, the new Act stipulates a workman without a certificate may not bring an action under the Workmen's Wages Act but he retains his rights at common law.

In municipalities where certificates of competency are not obligatory, a workman may bring an action on a sworn declaration that he is, according to the custom of his trade or occupation, a skilled workman or an apprentice and, for the purposes of this section, apprenticeship is limited to four years.

The provisions relating to certificates do not apply to general labourers or to persons who are required by any statute to be licensed.

Several changes were made in the sections dealing with penalties. In addition, the Workmen's Wages Act is designed to protect freedom of association. It is declared unlawful, directly or indirectly, to prevent an employee from becoming a member of an association and a person charged with this offence is liable, on summary conviction, to a maximum fine of $25 and costs. For a subsequent offence, he is liable to a fine of not more than $50 and costs. Proceedings may be instituted in such cases by the Minister of Labour, by a joint committee or by any person authorized in writing by the Attorney-General.

For dismissing an employee in connection with a complaint regarding an agreement, an order approving an agreement, a by-law of a joint committee or in connection with a violation of the Act or with evidence given in any inquiry or prosecution, an employer is liable, unless he can prove he had good and sufficient reason, to the same penalty as noted above.

Any member of a joint committee who refuses or neglects to fulfil his duties is also made liable to a maximum fine of $25 and costs.

If an employer engaged in an industry covered by an agreement does not keep a register as required by the joint committee or refuses to allow examination of the register or pay-roll, a maximum fine of $25 for the first offence and of $50 for a subsequent offence may be imposed with costs in each case. If he fails to post the notice of the wage-scale as required by the committee, he is liable to $10 and costs.

The penalty for refusing information to the joint committee remains at a maximum of $25 and costs for the first offence and $50 and costs for the second. For giving false information, the fine is raised to a maximum of $500 with a minimum of $200 and costs for a first case and from $500 to $1,000 for a subsequent offence. In default of payment of the fine for this offence, the convicted person shall be sentenced to imprisonment for a term of from one to three months for a first offence and for three months for a subsequent offence.

The penalty for violating the requirement as to certificates of competency remains at a maximum of $5 for a first offence but for another offence it is changed from a maximum of $10 to a minimum of $5 and a maximum of $25 with costs in each case.

The new statute expressly makes liable to a fine of from $10 to $25 any person who grants or accepts any benefit having a pecuniary value so as to reduce the wage rate established under the Act. A maximum fine of $50 may be imposed for a subsequent offence of this kind.

For any other violation of an order in council extending an agreement or of any by-law of a joint committee or of any provision of the Act, a maximum fine of $10 and costs may be imposed.

All proceedings for the above offences, except that relating to freedom of association, must be brought by the joint committee.

Fair Wage Act

The Fair Wage Act, which will come into effect on September 1, 1937, repeals the Women's Minimum Wage Act, passed in 1919, but provides that regulations, decrees, and proceedings adopted under that Act shall continue in force unless amended or replaced by ordinances issued under the new statute. The Fair Wage Act applies to every apprentice, workman, artisan, clerk and employee on a salary or wage, male or female, working individually, in a crew or in partnership, but does not apply to any agriculturist, settler or farm-hand or to a domestic servant in a private house. The Act covers all employees who have not availed themselves or who do not desire or are unable legally to avail themselves of the provisions of the Act respecting Workmen's Wages. It also applies to cases in which the Fair Wage Board is satisfied that an association of employees cannot agree with an association of employers or with one or more employers contracting personally for the adoption of a collective labour agreement under that Act.

The Fair Wage Act is to be administered by a Fair Wage Board of not more than five members appointed by the Lieutenant-Governor in Council who is to fix their remuneration and designate one member as president and another as vice-president. The Board is to constitute a corporation. With the approval of the Lieutenant-Governor in Council the Board may organize conciliation committees comprising, as far as possible, representatives in equal numbers of employees and professional employers and presided over by a delegate from the Board. A "professional employer" is defined as an employer who habitually utilizes the services of employees for a kind of work which constitutes his calling, trade, business, profession or occupation. The conciliation committee, within the time and at the place fixed by the Board, must call a conference of the employees and professional employers in the trade, industry, business, profession, or occupation concerned for the purpose of arriving at an agreement regarding fair working conditions and report its conclusions to the Board.

Following the report of a committee, or of its own motion, or where a committee has not reported within a reasonable time, or where no committee has been appointed, the Board may determine fair wages and working hours, make all investigations authorized by the Lieutenant-Governor in Council and submit to him its conclusions and suggestions respecting the work of minors under 18 years of age. The Board may vary wages and hours according to the locality and the nature of the work, and must take into consideration the conditions created by competition from other countries and provinces. All ordinances of the Board relating to wages and hours of labour must be approved by the Lieutenant-Governor in Council on recommendation of the Minister of Labour, who is charged with the carrying out of the Act, and are to come into effect on the twenty-first day after publication in the Quebec Gazette or on any other date which may be fixed by the Lieutenant-Governor in Council. The Board may cancel or alter an ordinance at any time if it deems conditions to have changed since such ordinance was issued. Such cancellation or alteration, if approved by the Lieutenant-Governor in Council, is to take effect from the thirtieth day after publication in the *Quebec Gazette*.

An ordinance respecting fair working conditions is obligatory upon all employers and employees in the same trade, industry, business, profession or occupation in the district covered. Agreements stipulating a wage lower than the fixed minimum are unlawful and, notwithstanding such agreement, an employee may claim the full wages to which he is entitled under the ordinance. When the conditions of an agreement are to the advantage of the employee, however, they are to have effect unless expressly prohibited by the provisions of the ordinance.

The Board may make regulations relating to its own government and to matters of procedure; to compel any professional employer to keep a register of the names, addresses, and competency of each employee, the duration and nature of his regular and overtime work, the wages paid and the mode and time of payment; to provide for the examination of registers and pay-lists and the checking with employers and employees of wage rates, hours of work and the observance of provisions of an ordinance relating to apprenticeship or other matters, and for requiring information from employers and employees under oath; to require professional employers to post copies in French and English of the wage scale or

other by-law of the Board in four conspicuous places in the establishment; to classify operations and determine different categories of employers and employees; to fix a special scale of wages for seasonal employees and those under 18 years of age; to grant certificates to employees who are mentally or physically handicapped, authorizing their employment on conditions other than those provided in the ordinance; and to levy upon the professional employers to whom an ordinance applies a sum not exceeding one per cent, of pay-roll, the proceeds to be applied to the expenses of the Board. Regulations must be transmitted to the Minister of Labour and approved by the Lieutenant-Governor in Council and are to come into effect on the date of publication in the Quebec Gazette.

The claims of several employees against the same employer may be joined in a single action. The defendant may not make a counter-claim. Such actions are prescribed by six months.

The Act declares it unlawful, directly or indirectly, to prevent an employee from becoming a member of an association (which is defined as in the Act respecting workmen's wages) and any person charged with this offence is liable to a maximum fine of $25 and costs and upon failure to pay the fine to 15 days' imprisonment, and upon failure to pay costs to a further eight days' imprisonment. For a second offence the fine ranges from $25-$75 and costs, and the prison terms for failure to pay fine and costs are one month and fifteen days respectively. For a subsequent offence the fine is $100 and costs and the prison terms for failure to pay fine and costs are two months and one month respectively. Proceedings may be instituted by the Minister, by the Board or by any person having the written authorization of the Attorney-General.

An employer is guilty of an unlawful act who without sufficient reason, proof of which shall lie upon him, dismisses an employee in connection with a complaint regarding an ordinance, a by-law of the Board, or a violation of the Act, or for testifying in a prosecution or investigation, or who dismisses an employee to re-engage him for an inferior position, or changes an employee's occupation, rank, or position or gives it another title, in order to pay such employee a lower wage. Such employer is liable for a first offence to a fine of from $200-$500 and costs and upon failure to pay the fine to imprisonment for one month and upon failure to pay costs to an additional imprisonment for one week. For a second offence the fine ranges from $300-$800 and costs and the prison terms for failure to pay fine and costs are two months and one month respectively. For a subsequent offence a prison term of three to six months and costs may be imposed and an added term of three months in case of failure to pay costs. When such an offence is committed by a corporation the directors, every manager, and every departmental head are answerable for the above penalties.

It is unlawful for a professional employer to refuse or neglect to post a copy of the wage scale as required by the regulations and such employer is liable to a fine of $10 and costs and, for failure to pay the fine or to pay costs, to a prison term of 15 days and eight days respectively. For a second offence the fine is $25 and costs and the prison terms are one month and 15 days. For a subsequent offence the fine is $100 and costs and the prison terms are two months and one month. It is also unlawful for any person to violate an ordinance or by-law or any provision of the Act, and, in cases where no other penalty is provided, a fine of $10 and costs or imprisonment for 15 days may be imposed.

A professional employer who fails to keep a register as required by the regulations or refuses to allow an examination of register or pay-roll, any employer who refuses or neglects to furnish information to the Board or hinders the Board or a conciliation committee in the discharge of its duties, and any person who grants or accepts pecuniary benefit so as to reduce the minimum wage, is liable to the same penalty as for a similar offence under the Act respecting Workmen's Wages.

The name of an informer is to be kept secret and no witness examined in the course of a suit under the Act may be compelled to state that he is the informer, nor may any question be put to him with the object of showing whether the suit was taken on complaint by an informer or of revealing the name of an informer.

Any sale or cession, after May 23, 1937, of any interest, share or bond to an employee is prohibited unless such transaction is authorized by the Board.

The Act is not to affect the collective labour agreements in effect when it comes into force or which may come into effect thereafter.

Wages and Working Conditions in Forest Operations

An Act to assure Reasonable Wages for Workmen engaged in Forest Operations enables the Lieutenant-Governor in Council, on the recommendation of the Minister of Lands and Forests, to make regulations establishing minimum wages and reasonable working conditions for employees engaged in cutting, removal, rafting and floating of timber and

other work connected with such operations, whether the timber comes from Crown lands or from private property. In the case of operations carried on by farmers, settlers, and small industrialists the Lieutenant-Governor in Council may fix wages and working conditions different from those established for other classes of employees. An employee paid less than the fixed minimum wage may claim the difference in a civil action, notwithstanding any agreement providing for a lesser rate of remuneration. In respect of such claim the employee has the privilege, provided for in Article 1994c. of the Civil Code, upon all timber belonging to the person for whom he worked. He is also entitled to obtain a conservatory attachment of such timber as provided in Articles 955 and 956 of the Code of Civil Procedure. An employer infringing any provision of a regulation respecting working conditions is liable for a first offence to a fine ranging from $50-$500 and costs and in default of payment to imprisonment for a term of one to three months. For a second offence a fine of $100-$1,000 and costs may be imposed and in default of payment a prison term ranging from two to six months.

Workmen's Compensation

The Workmen's Compensation Act was amended to provide that the salaries of members of the Workmen's Compensation Commission, which were formerly fixed by the Act, shall be fixed by the Lieutenant-Governor in Council, and that the chief medical officer and other officers, clerks, and employees, who were formerly appointed by the Commission, shall be appointed by the Lieutenant-Governor in Council.

Employment of Children and Young Persons

An Act respecting the welfare of youth provides that, notwithstanding any provision to the contrary in any general law or special Act, the Lieutenant-Governor in Council may prohibit work by boys and girls under 16 years of age in the industrial or commercial establishments designated by him and, with respect to such dangerous work as he may designate, the employment of boys and girls under 18 years of age. Orders in Council issued under the Act are to come into force from the thirtieth day after their publication in the *Quebec Gazette*. Every person, association or corporation causing a boy or girl to work in violation of any Order is liable to a fine of from $10-$50 and costs for a first offence and from $50-$500 and costs for a subsequent offence and in default of payment to imprisonment for a period of from one to three months. The Minister of Labour is to have charge of the carrying out of the Act.

A section of the Industrial and Commercial Establishments Act (Revised Statutes of Quebec, 1925, chapter 182) provides that in any establishment classified by the Lieutenant-Governor in Council as dangerous, unwholesome or incommodious, the ages of the employees may not be under 16 years for boys and 18 years for girls and women. This section was amended in 1934 by the addition of a clause providing that the Lieutenant-Governor in Council may also prohibit entirely the employment of women and girls as well as of boys under 18 years of age in certain industrial establishments or parts thereof which he may deem dangerous or harmful to their health. In 1934 Orders in Council were issued under these sections.

Vocational Education

An Act respecting Technical Schools requires cities and towns to continue their contributions for the maintenance, building and repair of such schools at the rate fixed in 1936.

Unemployment Relief

An Act to Grant Certain Powers to Municipal Corporations to Aid the Unemployed, passed in 1935, was continued in force until June 1, 1938. The Act empowers municipal corporations to contribute out of their funds or borrow money as authorized by by-law to assist the unemployed. By-laws passed under the Act must now be approved by the Minister of Municipal Affairs, Trade and Commerce, and the Quebec Municipal Commission, instead of by the Lieutenant-Governor in Council and the Commission as formerly.

The Unemployed Aid Act, 1933, which enables the Government of the province to cooperate with the Government of Canada under Dominion Statutes and with the municipalities for the relief of unemployment was amended to permit the Provincial Government to expropriate immovable property up to an amount of $300,000 for the carrying out of unemployment relief work. An Act to reduce the powers granted to the Lieutenant-Governor in Council by regimes prior to August 25, 1936, further amends the Unemployed Aid Act, 1933, to enable the Minister of Labour and the Minister of Municipal Affairs to enter into agreements with municipalities for relief of unemployment without the authorization of the Lieutenant-Governor in Council which was formerly required. Such authorization is still necessary, however, in the case of agreements with the Government of Canada. The Minister of Labour and the Minister of Municipal Affairs, Trade and Commerce, instead of the Lieutenant-Governor in Council, may now

authorize the Provincial Treasurer to make advances covering the contributory share of the Dominion and the municipalities under an agreement for the relief of unemployment. The Act to reduce the powers of the Lieutenant-Governor in Council also amends the Unemployed Aid Act, 1931, to provide that the Minister of Labour and the Minister of Municipal Affairs, Trade and Commerce, may authorize the payment of the province's share of the costs of relief under agreements with the Government of Canada. Formerly power to authorize such payment rested with the Lieutenant-Governor in Council.

An Act to promote the Return to the Land, 1932, which made provision for a scheme of land settlement, was repealed.

Mines

Amendments to the Quebec Mining Act include a new clause under which the Minister of Mines and Fisheries may require any mining operator to make plans intended to give a better knowledge of the deposits and the work done in the mines for the protection of the workmen. Such plans are to be made on a uniform scale as fixed by the Minister for each undertaking and may be examined and copies taken by the inspector or other authorized representative of the Minister.

Professional Syndicates

An Act to reduce the powers granted to the Lieutenant-Governor in Council by regimes prior to August 25, 1936, amends the Professional Syndicates Act by transferring to the Provincial Secretary the power to approve of the by-laws of a professional syndicate and to authorize its incorporation which was formerly vested in the Lieutenant-Governor in Council.

Mothers' Allowances

The Needy Mothers' Assistance Act provides for the payment of a monthly allowance to a mother who is a widow or the wife of an inmate of a mental hospital and who has two or more children under 16 years of age residing with her and lacks the means to maintain them. The mother must be a British subject of at least 15 years standing, a resident of the province for the seven years immediately preceding the application for an allowance and must give reasonable guarantees of her ability to care properly for her children. Where a mother who is eligible for, or is receiving, an allowance dies or becomes an inmate of a mental hospital a grandmother caring for the children may be given an allowance if she fulfils the conditions as to nationality, residence, capability and lack of means.

The Lieutenant-Governor in Council may entrust the administration of the Act to a body created by him for the purpose under such name as he may designate, or to one already existing, or to a member of the Executive Council charged with the administration of a department. Application for an allowance may be made to such administrator or to the official appointed to investigate applications for pensions under the Quebec Old Age Pensions Act.

The cost of allowances and the expenses of administering the Act are to be paid from the Consolidated Revenue Fund of the Province. The Lieutenant-Governor in Council may, however, authorize the Provincial Treasurer to raise a loan for this purpose. The Lieutenant-Governor in Council may make regulations fixing the bases for allowances, the time and mode of payment and, generally, for carrying out the provisions of the Act.

Endorsement of all cheques for allowances must be certified by a minister of religion, a secretary-treasurer of a municipal council or school board, a commissioner of the Superior Court, a Justice of the Peace or a bank manager. Allowances may not be seized or assigned and are exempt from provincial or municipal taxation.

Pensions for the Aged and Blind

A provision similar to the above requiring endorsement of cheques to be certified was added to the Old Age Pensions Act and was also included in the Blind Persons Aid Act. The latter statute enables the Government of the Province to take advantage of any legislation of the Parliament of Canada providing for pensions for the blind and to authorize payment by the Government of the Province of its contributory share. Provisions governing such payment and the administration of the Act are similar to the provisions for financing and administration of the Needy Mothers' Assistance Act. Pensions for the blind are also exempt from seizure, assignment, and from provincial and municipal taxation.

Miscellaneous Legislation

An Act to encourage Peoples' Savings and the Banks called Desjardins, authorizes the Government of the Province to grant subsidies up to a total amount of $40,000 over a period of five years towards the extension, maintenance and supervision of such banks. The Minister of Agriculture is given power to make contracts fixing the conditions on which such subsidies are to be granted.

An Act respecting Communistic Propaganda enables the Attorney-General to order the closing, for a period not exceeding one year,

of any building or other structure, upon satisfactory proof that it is being used to further communism or bolshevism. The Act also declares it unlawful to print, publish, or distribute any newspaper, periodical, pamphlet or writing tending to spread bolshevism or communism. Such paper, pamphlet, etc., may be confiscated and the person printing or distributing it is liable to imprisonment for from three to twelve months and to pay costs of prosecution and in default of payment of costs to an additional month's imprisonment.

MINIMUM WAGES IN BRITISH COLUMBIA AND ALBERTA

Recent Orders of Provincial Boards

Recent orders issued by the Boards of Industrial Relations in British Columbia and Alberta deal with the employment of male workers. In British Columbia, the Board established a minimum wage in the construction industry, while in Alberta, the recently created Industrial Relations Board has gazetted an Order applicable to all male workers until such time as minimum wages for men are fixed by a further order.

British Columbia

Since September 20, 1934, minimum wages in the construction industry have been governed by Order No. 12 (LABOUR GAZETTE, October, 1934, page 913) and a separate order (No. 40) established minimum wages in the carpentry trade (LABOUR GAZETTE, January, 1937, page 24).

Both these Orders are now rescinded and in substitution the Board has issued Order No. 45 (effective July 5, 1937) covering all trades within the classification of construction industry. By the former Orders, the minimum wage in the construction in certain designated areas was fixed at 40 cents per hour. This did not include carpenters and several other trades. Carpenters, by the old Order (No. 40) received a minimum wage of 70 cents per hour. Now the new Order (which broadens its classification of construction industry to include carpentry and other trades not designated in the former construction Order) establishes a minimum wage for skilled tradesmen of 75 cents per hour; and also fixes a minimum wage for common labourers according to specified age groups and localities.

As the new order differs considerably in scope from those issued previously, it is given in full as follows:—

ORDER No. 45.—*Order establishing a Minimum Wage in the Construction Industry*

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, and amendments thereto, the Board of Industrial Relations hereby orders:—

1. That where used in this Order the following expressions shall have the following meanings respectively:—

(*a*) "Construction industry" includes construction, reconstruction, repair, alteration, or demolition of any building, railway, tramway, harbour, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telephonic or telegraphic installation, electrical undertaking, gaswork, waterways, or other work of construction; as well as the preparation for or laying the foundations of any such work or structure; or installation of heating, electrical, refrigerating, air-conditioning, telegraphic, or telephonic equipment;

(*b*) "Skilled tradesman" means and includes every employee employed in the work usually done by blacksmiths; boilermakers; bricklayers; carpenters; electricians; engineers (hoisting and operating); floor-layers (wood or composition); gas-shovel operators; iron workers (ornamental); lathers; machinists; millwrights; painters (including decorators, paperhangers ,and glaziers); plasterers; plumbers; pile-drivers, bridge, wharf, and dock builders; pipe-fitters; sheet-metal workers; stonecutters; steamfitters; structural steel and iron workers; shinglers; steam shovel operators; tile-setters, marble-setters, and terrazzo workers; welders.

(*c*) "Common labourer" means and includes every employee employed in any capacity except employees herein defined as skilled tradesmen.

2. That the minimum wage for every skilled tradesman in the construction industry on Vancouver Island, in the City of Vancouver, the City of New Westminster, Municipality of the District of West Vancouver, the Municipality of the District of Burnaby, and the Municipality and District of North Vancouver shall be the sum of seventy-five cents (75c.) per hour.

3. That the minimum wage for every common labourer in the construction industry (not included in any other Order of the Board):—

(1) In the localities specified in section 2 hereof, shall be:—

(*a*) Forty-five cents (45c.) per hour for such employees twenty-one (21) years of age or over;

(*b*) Thirty-five cents (35c.) per hour for such employees under twenty-one (21) years of age.

(2) In localities within the Province of British Columbia other than those specified in section 2 hereof, shall be:—

(*a*) Forty cents (40c.) per hour for such employees twenty-one (21) years of age or over;

(*b*) Thirty cents (30c.) per hour for such employees under twenty-one (21) years of age.

4. That no employees (except common labourers under 21 years of age) in the construction industry in localities within the Province of British Columbia, other than those localities specified in section 2 hereof, shall be paid less than the minimum wage fixed in section 3 (2) (*a*) hereof.

5. That this Order shall not apply to apprentices who are duly indentured pursuant to the provisions of the "Apprenticeship Act," being chapter 3 of the Statutes of British Columbia, 1935.

6. That whereas conditions during the past few years have made it impossible for a number of young men to acquire sufficient knowledge and experience to enable them to obtain employment on a parity with expert and fully skilled tradesmen, and that the said young men by reason of circumstances cannot become apprentices under the "Apprenticeship Act," and that in the interests of all concerned, and in justice to the said young men, some legitimate provision should be made for their welfare whereby within reasonable time they may develop into fully skilled tradesmen;

Therefore it shall be permissible for any employee in the circumstances cited above to make application to the Board, by statutory declaration on a form provided by the Board, to be employed at a lower rate than the rate fixed in section 2 hereof.

After due investigation the Board, on being satisfied with the bona fides of such application, may issue to the applicant a special permit in writing setting out the minimum wage to be paid to the employee named thereon, for the period specified on the permit.

7. That this Order become effective on the 5th day of July, 1937, and be in substitution for Order No. 12 of the Board establishing a minimum wage in the construction industry, dated the 28th day of September, 1934, and for Order No. 40 of the Board, establishing a minimum wage in the carpentry trade, dated the 1st day of December, 1936, which are hereby rescinded.

Dated at Vancouver, B.C., this 14th day of June, 1937.

Alberta

The Alberta Board of Industrial Relations administering the provincial wage legislation (LABOUR GAZETTE, November, 1936, pages 995-6) has issued an Order in the Alberta Gazette of May 31 "to provide protection for male workers" in regard to minimum wages.

Prior to the enactment of the Male Minimum Wage Act in 1936, the provisions of the Minimum Wage Act of 1925, by virtue of certain sections of the Factories Act, 1926, were applicable to male workers. These clauses of the Factory Act (which provided that where a minimum wage had been fixed for female workers in any class of employment, no male worker might be employed in such class at a lower wage) were repealed as unnecessary following the enactment of the Male Minimum Wage Act.

To protect male workers until such time as the Board establishes male minimum wages in industrial occupations (as provided under section 5 of the Male Minimum Wage Act) the following regulations have been issued:—

(1) Wherever a minimum wage has been fixed for female workers in any class of employment, no male workers shall be employed in such class of employment at a less wage, provided that such wages shall not apply to apprentices who have been duly indentured by indentures approved of by the Board of Industrial Relations, and who are receiving proper instructions from the persons to whom they are apprenticed.

(2) Any overtime permitted under "The Hours of Work Act" being Chapter 5, 1936, Statutes of Alberta (Second Session), shall be paid for at a rate of one and a half times the ordinary rate of payment.

(3) All employers shall pay wages to such male workers at not less than the said minimum wage, and if any employer fails to do so he shall, upon summary conviction, be liable to a penalty of not more than $500, and shall also, upon conviction, be ordered to pay the worker concerned the difference between the wages actually received by him and the said minimum wage.

Protection of Older Workers

Bills attempting to legislate against the practice of discrimination in employment on account of age were introduced this year in six States: Illinois, Massachusetts, Minnesota, New York, Pennsylvania, and Texas. Thus far, only the New York and Massachusetts bills have been enacted. The former is a resolution creating a joint legislative committee of three members of the Senate and four members of the Assembly "to investigate and study the nature and effect of any economic conditions or statutory provisions which may tend to produce an unfair, unequitable or unlawful discrimination against those men and women who have reached the age of 40 or thereabouts in obtaining and retaining gainful and livable employment in public service and private industry; to investigate and study the extent to which age is a factor in determining the efficiency of men and women engaged in such public service and private industry in seeking employment therein; to check the findings of previous investigations in the light of changed economic conditions; to investigate the effect of pension systems and group and workmen's compension insurance upon the employment of the older person; and to suggest remedies to relieve or correct the causes therefor." A report to the State Legislature not later than February 1, 1938, is called for, and $50,000 was appropriated for the expenses of the committee.

The Massachusetts Act provides that it shall be against public policy to dismiss or refuse to employ a person because he is 45 years of age or over, provided he is not 65 years of age. It empowers the Commissioner of Labor and Industries to investigate all complaints and ascertain the ages of persons employed. If the Commissioner finds complaints justified, he may publish the name of the employer as violating the act, after notice and hearing. Employers are required to keep age records and permit examination of such records. The act does not apply to domestic service or farm labour.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Twenty-Third Session of the International Labour Conference

THE Twenty-third Session* of the International Labour Conference (League of Nations) was held at Geneva from June 3 to June 23, 1937.

Each Member State is entitled, under the terms of the Treaties of Peace, to send four delegates to the Conference, two of whom must be government delegates and the two others are to represent, respectively, employers and workpeople. These representatives must be chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople. Each delegate may be accompanied by advisers not exceeding two in number for each item on the agenda of the meeting.

The decisions of the Conference may take the form of Draft Conventions or Recommendations. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Draft Convention or Recommendation by the Conference. The Draft Conventions and Recommendations are afterwards communicated by the Secretary-General of the League of Nations to the countries represented in the International Labour Organization. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the Draft Conventions or Recommendations before the authority or authorities within whose competence the matters lie, for the enactment of legislation or other action.

In Canada, the Draft Conventions and Recommendations adopted at each session of the Conference have been examined by the Law Officers of the Crown to determine whether the subject-matters were within federal or provincial jurisdiction, and they, together with the law officers' reports on the question of jurisdiction, have thereupon been brought before the Dominion Parliament and the respective Provincial authorities.

Countries Represented

The number of Member States represented at this Session of the Conference was 53. There were in attendance 101 Government delegates, 38 employers' delegates, and 36 workers' delegates, making a total of 175 delegates. There were also 251 technical advisers present, so that in all there were 426 persons at the Conference.

A list of the countries represented follows: Afghanistan, Albania, United States of America, Argentine Republic, Australia, Austria, Belgium, Bolivia, Brazil, British Empire, Bulgaria, Canada, Chile, China, Colombia, Cuba, Czechoslovakia, Denmark, Dominican Republic, Egypt, Ecuador, Estonia, Finland, France, Greece, Hungary, India, Iraq, Iran, Irish Free State, Japan, Latvia, Lithuania, Luxemburg, Mexico, Netherlands, Norway, New Zealand, Panama, Peru, Poland, Portugal, Rumania, Siam, Union of Soviet Socialist Republics, Union of South Africa, Spain, Sweden, Switzerland, Turkey, Uruguay, Venezuela, and Yugoslavia.

The Argentine Republic and Uruguay having each sent only one non-Government delegate, were not entitled to vote. The total number of delegates entitled to vote was 173. The quorum was therefore 87.

Canadian Delegation

The Canadian delegation to the Conference was made up as follows:—

Delegates representing the Government of Canada.—Dr. W. A. Riddell, Canadian Advisory Officer accredited to the League of Nations, Geneva; and Mr. W. M. Dickson, Deputy Minister of Labour, Ottawa, Ontario.

Technical Advisers to the Government Delegates.—Mr. C. R. McIntosh, M.P., and Chairman of the Committee of the House of Commons on Industrial and International Relations, North Battleford, Saskatchewan; Mr. Norman S. Dowd, Secretary-Treasurer, All-Canadian Congress of Labour, Ottawa, Ontario; Mr. Alfred Charpentier, General President, La Confederation des Travailleurs Catholiques du Canada, Inc., Montreal, P.Q.; and Mr. Zenon David, President of the Canadian Federation of Labour, Montreal, P.Q.

Delegate Representing the Employers of Canada.—Mr. A. R. Goldie, President of Goldie & McCulloch Co., Ltd., and Chairman of the Industrial Relations Committee of the Canadian Manufacturers' Association, Galt, Ontario.

Technical Adviser to Employers' Delegate.—Mr. H. W. Macdonnell, Secretary of the Industrial Relations Department, Canadian Manufacturers' Association, Toronto, Ontario.

* A session of the Conference has been held annually since the first session in 1919. Two sessions were held in 1926 and in 1929 and three in 1936. A report of each session was given in the LABOUR GAZETTE for the year.

Delegate Representing the Workpeople of Canada.—Mr. Robert J. Tallon, Secretary-Treasurer, Trades and Labour Congress of Canada, and President of Division No. 4 of the Railway Employees' Department, American Federation of Labor, Ottawa, Ontario.

Technical Adviser to Workpeople's Delegate.—Mr. D. W. Morrison, Vice-President of Trades and Labour Congress of Canada, and President of District No. 26, United Mine Workers of America, Glace Bay, Nova Scotia.

Canada was represented on committees of the Conference as follows: on the Committee on Public Works by Mr. Dickson, Mr. Goldie (with Mr. Macdonnell as substitute) and Mr. Tallon, who was elected Vice-Chairman; Committee on Printing and Kindred Trades by Mr. McIntosh, M.P., who was elected Chairman; Committee on the Chemical Industry by Dr. Riddell, and by Mr. Morrison, who also served on the Selection Committee; Committee on the Textile Industry by Mr. Charpentier; Committee on Safety in the Building Industry by Mr. David; Committee on Minimum Age Conventions on Industrial and Non-Industrial Employment, by Mr. Dowd and Mr. Goldie; and Committee on Application of Conventions by Mr. Goldie, and Mr. Morrison as substitute.

Officers of the Conference

The following officers were elected:—

President.—Mr. Sean Lemass, T.D., Minister for Industry and Commerce, Irish Free State.

Vice-Presidents.—Mr. Garcia Oldini, Chilean Government Delegate; Mr. A. R. Goldie, Canadian Employers' Delegate; and Mr. Bogdan Krekitch, Yugoslavian Workers' Delegate.

Secretary-General.—Mr. Harold Butler, Director of the International Labour Office.

Agenda

The agenda of the Conference comprised the following items:—

1. Safety provisions for workers in building construction with reference to scaffolding and hoisting machinery;
2. Reduction of hours of work in the textile industry;
3. The planning of public works in relation to employment;
4. Reduction of hours of work in the printing and kindred trades;
5. Reduction of hours of work in the chemical industry;
6. Partial revision of the Minimum Age (Industry) Convention 1919; and
7. Partial revision of the Minimum Age (Non-Industrial Employment) Convention, 1932.

The first two of these subjects had come up for first discussion at the Twentieth Session (which was the last General Session) of the Conference in 1936, but the other items were new subjects discussed for the first time. In addition, the Conference dealt with the annual report of the Director of the International Labour Office and the summary of the annual reports by States members on the measures taken to give effect to the provisions of Conventions to which they are parties. It also took note, without discussion, of the decennial reports on the working of (a) the Workmen's Compensation (Accidents) Convention of 1925, (b) the Workmen's Compensation (Occupational Diseases) Convention of 1925, and (c) the Inspection of Emigrants Convention of 1926, respectively; and of the quinquennial report on the working of the Forced Labour Convention of 1930.

Decisions of the Conference

The following is a summary of the decisions of the Conference:—

Safety Provisions in the Building Industry.—A Draft Convention concerning safety provisions in the building industry was adopted by 128 votes to nil. Four Recommendations concerning this industry were also adopted as follows:—(1) concerning safety provisions, and embodying a Model Code of Safety Regulations, by a vote of 117 to 3; (2) concerning inspection, by a vote of 124 to nil; (3) concerning co-operation in accident prevention, by a vote of 115 to nil; and (4) concerning vocational education, by a vote of 122 to nil.

Reduction of Hours of Work in the Textile Industry.—A Draft Convention concerning the reduction of hours of work in the textile industry was adopted by a vote of 88 to 41.

The Canadian Government delegates and the Workers' delegate voted in favour of this Convention, while the Employers' delegate voted against it.

The Planning of Public Works in relation to Employment.—A Recommendation concerning international co-operation in respect of public works was adopted by a vote of 148 to nil. A second Recommendation concerning the national planning of public works was adopted by a vote of 147 to nil. The Conference also adopted unanimously a Resolution on international co-operation concerning public works, inviting the Governing Body to appoint as soon as possible, and to convene without delay, an international public works committee.

Mr. W. M. Dickson, Canadian Government delegate, took part in the discussion of this

subject in committee and a summary of his statement follows:

> Action had been taken in Canada on the lines suggested in the International Labour Office Report. In 1930 the Unemployment Relief Act was passed under which the Federal Government gave assistance to the provinces in their efforts to relieve unemployment by means of loans not exceeding 20 million dollars. Some 390 million dollars had been thus advanced so far, and the total cost of the various schemes, including what had been spent by the provincial governments, approximated 800 million dollars. A central body, namely, the National Employment Commission, responsible to the Federal Minister of Labour, for collecting and co-ordinating information was now in operation. The Canadian Government was in favour of the Office proposals on this subject being adopted, and would support them, the more so as the Federal and Provincial Governments were working in co-operation in the matter of relief works. Under the provisions of the Canadian constitution the Federal Government was not always in a position to undertake international obligations in view of the divided authority between the Dominion and Provinces.

Mr. Tallon also took an active part in the work of the Committee and was appointed a member of the Drafting Committee.

Reduction of Hours of Work in the Printing and Kindred Trades.—A proposed Draft Convention for the reduction of hours of work in the printing and kindred trades failed to obtain the necessary two-thirds majority on final vote, the vote being 72 to 43.

Reduction of Hours of Work in the Chemical Industry.—A proposed Draft Convention for the reduction of hours of work in the chemical industry failed to obtain the necessary two-thirds majority on the final vote, which was 76 to 42.

The Canadian Government delegates refrained from voting on these two latter proposed conventions, and the Canadian Employers' delegate voted against the proposals for the 40-hour week. Mr. C. R. McIntosh, M.P., Technical Adviser to the Government delegates, pointed out that Canada was in a difficult constitutional position, owing to the fact that the question of hours of work in industry comes within provincial jurisdiction and that in these particular instances the views of the provinces on the matter had not been obtained, owing to the fact that the reports on these industries had not been received from the International Labour Office in time for submission to the provinces before the Conference opened. Emphasizing this point, Mr. McIntosh declared:—"Until we are definitely sure whether these matters should be dealt with by the Provinces or by the Dominion—and all the evidence goes to show that they fall within Provincial and not Federal jurisdiction—we cannot very well take national action."

Partial Revision of the Minimum Age (Industry) Convention of 1919.—A Draft Convention raising the minimum age for admission of children to industrial employment to fifteen years instead of fourteen, as set out in an earlier Convention, was adopted by the Conference by a vote of 98 to 18. A recommendation concerning the minimum age for the admission of children to industrial employment in family undertakings was also adopted by the Conference by a vote of 82 to 18.

Partial Revision of the Minimum Age (Non-Industrial Employment) Convention of 1932.—A Draft Convention raising the minimum age for the admission of children to non-industrial employment to fifteen years instead of fourteen, as set out in an earlier Convention, was adopted by the Conference by a vote of 81 to 22.

The situation in Canada and the attitude of the Canadian Government delegation on this subject was indicated in committee by Mr. Norman Dowd, Canadian Government technical adviser, as follows:—

> In Canada the question of minimum age legislation was constitutionally one for the provinces to settle. The situation in Canada, however, was favourable to the proposed reform and the replies of the provincial governments showed that in seven of the nine provinces either a school-leaving age of 15 was in force, or the government was in favour of the reform. In the most important industrial province, Ontario, the age for school attendance was up to 16 years. One law which differed from the proposal was found in Saskatchewan, where the minimum age for boys was 14 years.

The Canadian Government delegates therefore supported the proposed amendment.

The Canadian Employers' delegate, Mr. A. R. Goldie, voted against the revision of these two conventions, giving as his reasons that as in Canada 15 years is practically the existing limit, conditions would not be impoved as regards the age of entering employment by passing or even ratifying the Conventions. He said: "If the question on which we are asked to vote had been the Draft Convention as prepared by the Office, after consulting the Gov-

ernments, I would have been ready to support it, but in my opinion as these Conventions have emerged from the Committee they are too rigid. They are so rigid, in fact, that I believe they defeat their object." He believed that these conventions, if adopted, had very little chance of being ratified by Governments and that they will delay rather than advance the improvement of conditions. He stated that although he thoroughly believed in the principle of the age of 15 years for entering industry, there were so many other considerations against the Conventions that he proposed to vote against them.

The texts of the Draft Conventions and Recommendations above referred to appear at the close of this article.

Resolutions on Limitation of Hours.—Towards the close of the Conference, a Resolution submitted by the Belgian and the French Workers' delegates concerning the extension of the reduction of hours of work to all economic activities was adopted by 66 votes to 39. This resolution reads as follows:—

"The Twenty-third Session of the International Labour Conference, examining the efforts made since 1931 by the International Labour Organization to reduce as far as possible the disastrous effect of the world depression on the economic system of all countries in general and on the working classes in particular;

"Considering that, of the measures advocated, the reduction of hours of work is of outstanding importance and has above all others engaged the attention of the International Labour Organization;

"Considering that, at the Eighteenth Session in 1934, the attempts to prepare and adopt a general Convention with a view to introducing the 40-hour week in all countries and in all industries, were unsuccessful;

"Considering that at that time it appeared that more tangible results could be obtained if the question of the reduction of the working week were considered separately for each industry;

"Considering that for that purpose a procedure was put into operation with a view to the adoption of Conventions covering several industries, for example the iron and steel industry, the building industry, the coal-mining industry, glass-bottle works, public works, the textile industry, etc.;

"Considering that only two Conventions have been adopted, namely those concerning public works and glass-bottle works;

"That, on the other hand, the attempts to arrive at the adoption of Conventions concerning the coal-mining industry, the iron and steel industry and the building industry were unsuccessful;

"Considering that such a procedure entails more risks than tangible results and will require an incalculable number of years before a satisfactory solution is achieved;

"Considering that the economic situation and the attempts which have been made to deal with the question show clearly that efforts should be directed towards the adoption of a general Convention;

"But considering that the procedure already set in motion concerning the industries included in the agenda of the 1937 and 1938 sessions should follow its course,

"Requests the Governing Body to examine the situation and to consider placing on the agenda of the next session of the Conference the question of the generalization of the reduction of hours of work in all economic activities which are not covered by the Conventions already adopted and those to be adopted by the Twenty-third Session of the Conference."

Other Resolutions Adopted

The Conference also adopted other resolutions concerning such questions as: Burma's future participation in the work of the International Labour Organization; the life and labour of indigenous workers; the establishment of a Tripartite Asiatic Committee; the maintenance of the rights of migrant persons insured or pensioned under social insurance schemes; the rights of women workers; and the fulfilment by the Members of the International Labour Organization of their obligations under the Constitution to bring the draft conventions and recommendations before the authority or authorities within whose competence the matters lie for the enactment of legislation or other action, within eighteen months at the latest from the closing of the Conference.

Opening Proceedings

The proceedings were formally opened by Mr. Jaromir Nečas (Government delegate from Czechoslovakia), as Chairman of the Governing Body of the International Labour Office. He observed that the attendance showed a substantial increase over that recorded at the opening of last year's conference, which was attended by 389 delegates and advisers from 48 countries. He also pointed out that a large number of countries were represented by the Ministers responsible for directing their social policies; e.g., Finland, the Irish Free State, Latvia, Luxemburg, Yugoslavia and New Zealand.

Referring to the questions before the Conference, he called attention to the fact that three of them related to hours of work—in the

textile industry, the printing industry and the chemical industry, respectively. He was convinced that, even if economic activity recovered to the peak of highest prosperity, it would never be possible to solve the unemployment problem without far-reaching readjustments in hours of work.

He went on to point out that unemployment in the modern world was not merely the result of economic circumstances; its causes were structural and permanent. It was necessary to ensure that technical progress should be a blessing and not a curse for the workers. Hundreds of thousands of workers in the textile, printing and chemical industries, who were living in anxiety and want, had their eyes fixed on this Conference and the Conference must not disappoint their expectations.

Upon taking the chair as President of the Conference, Mr. Sean Lemass thanked the Conference for the honour conferred on his country, the Irish Free State. The fact that a representative of a small State should be called upon to preside over a Conference such as this, he said, seemed to be significant of the radical difference between the principles of the new world order which the International Labour Organization was helping to create and those of the old order which was passing away. They could not hope to cure the economic ills of the world merely by reverting to the situation that obtained before the recent economic crises or before the world war, when a few great States dominated the industrial production of the world. There had already been a marked expansion and diffusion of industrial activity, and he believed that this process must and should continue. All nations, big and little, could learn from one another and help one another. That was why the present Conference had assembled.

The International Labour Organization was alive and vigorous, he declared, with an imposing record of solid achievement to its credit, growing in influence and in authority, an efficient instrument for the promotion of justice and humanity in the world. As the Director had pointed out in his Report, there had been since the Organization was set up a universal change in the attitude of Governments to social policy and, what was perhaps even more important, a change in the viewpoint of the average citizen on the obligations of governments in matters of social policy. No longer was social policy regarded as subsidiary to economics. It now occupied a foremost place in the minds of statesmen and in the programs of administration. In all countries there was growing in the minds of men a deep conviction that destitution or poverty, arising from unemployment or any other cause, were not inevitable phenomena which rulers of States could merely deplore, but the undesirable results of defects in economic organization which were capable of being remedied by sound national planning supported by international economic co-operation.

A welcome recovery in economic conditions had been recorded during the past twelve months. This measure of recovery, however uncertain in its beginnings and however doubtful as to its duration, was the more welcome because it increased the possibility of a more extensive and ambitious program of social improvement being formulated in the Conference and adopted by States. The agenda for the present session, he said, was a heavy one and, as regards some items, controversial. He hoped, however, that the Conference would contribute something of permanent value to the promotion of the happiness and the security of the workers of the world.

Discussion of the Director's Report

A summary of the Annual Report of the Director of the International Labour Office to the Conference appeared in the May issue of the LABOUR GAZETTE, at pages 533-535

The discussion of the annual report of the Director of the International Labour Office occupied five days, delegates of all groups and from many countries exchanging views on the important economic and social questions summed up therein.

Dr. W. A. Riddell, Canadian Government delegate, observed that the Report opened on a most optimistic note by announcing that "to-day there can be no doubt that a large measure of recovery has been accomplished," and that the worst effects of the slump, a slump which has been as "devastating as famine and as disruptive as war" are now matters of past history. It states that this large measure of recovery has been achieved "mainly by the positive action of Governments, rather than by any process of automatic readjustments." Dr. Riddell said that whatever may be the cause of recovery, all welcome the fact that statistics of production, world trade, as well as the reduction of unemployment, all go to show that considerable progress has been made in most countries on the road to recovery. Among those, he was pleased to say, Canada was no exception.

Referring to the need for freer trade which was stressed in the Report, Dr. Riddell said: "Since 1935 the Canadian Government have continuously endeavoured to open the channels of trade, and negotiations have been undertaken with a number of countries, including the United States of America and the United Kingdom, which have led to substantial reductions in tariff rates. In no instance were concessions to these two countries effected by

raising duties against any other. Our customs administration has been greatly liberalized. The Prime Minister has expressed the hope that his Government will be able to continue on these lines with other countries and thus contribute in the measure of our power to the revival of trade and consequent removal of international friction and conflict. The beneficial effects of these negotiations are already being seen in the increased import and export trade of Canada. . . Canada is now fifth among the trading nations of the world."

Dr. Riddell also observed that the Director's reference to the importance of the tourist industry was well founded, Canada's annual income from this source having been increasing steadily and last year had amounted to more than 257 million dollars. Canada now ranks first among tourist countries, welcoming during the last year more than 16 million visitors.

He went on to say that while the decrease in unemployment has not kept pace with the increase in trade and production, considerable progress has been made over the worst years of the depression. Canada, with great developed power resources, is producing more and more with less and less manual effort. Technicological change in Canada, as in many other countries, has had a disquieting influence on the volume of employment. Canada, however, has put forth a great effort and has expended more than 800 million dollars in trying to deal with her unemployed. In addition, the Governments this year are spending 40 million dollars on old age pensions; a million dollars have been voted for the development of training projects for unemployed young people; and some 50,000 young people have been assisted in employment on farms, while another 20,000 persons have been placed on the land under relief land settlement schemes.

Dr. Riddell concluded his address by declaring that the Conference will have fully justified its convening if it succeeds in bringing about an effective realization of the interdependence of industry and agriculture. He thought it one of the weaknesses of the International Labour Organization that its attention has been devoted too much to industry and too little to agriculture in its broadest sense. However, following the resolution of the Nineteenth Session of the Conference stressing "the importance of the part which the agricultural element has to play in general economic recovery," a very representative Permanent Agricultural Committee has been set up and is expected to meet in February next, so that a thorough examination may be looked for of the ways and means of bringing about "a happy marriage of industry and agriculture, in which both partners will share equally in the joint prosperity."

Address of Canadian Deputy Minister of Labour

Doctor Riddell, on behalf of the Government delegation from Canada, having dealt with the major economic aspects of the Director's Report, his colleague, Mr. W. M. Dickson, Deputy Minister of Labour of Canada, discussed the position of the Dominion with respect to the items on the Conference agenda and the legislative jurisdiction of the Parliament of Canada in the matter of social legislation—having regard to the powers conferred on the provinces under the Constitution. In this respect, he stated:

"Prior to 1935, federal governments had been proceeding on the principle that jurisdiction in the regulation of wages, hours of labour, working conditions in industry and social legislation generally lay, in the main, with the provinces under section 92 of the British North America Act, the exercise of the legislative power by the Parliament of Canada in regard to all matters not enumerated in section 92 of the said Act having been declared, by more than one pronouncement of the Judicial Committee of the Privy Council, to be strictly confined to such matters as are unquestionably of Canadian interest and importance. In 1935, however, the then federal government ratified certain conventions agreed upon at general conferences of this Organization, and enacted legislation giving effect to those conventions. The Acts so passed were: (1) the Employment and Social Insurance Act, 1935; (2) the Weekly Rest in Industrial Undertakings Act, 1935; (3) the Minimum Wage Act, 1935; (4) the Limitation of Hours of Work Act, 1935. As certain of the Provinces had challenged the action of the Dominion therein, and doubt having arisen as to the right of the Parliament of Canada to enact the said Acts in whole or in part, the Government thought it expedient that the question should be referred to the Supreme Court for hearing and consideration. The Supreme Court duly expressed its judgment on all four Acts in June 1936. The Chief Justice and two of his fellow judges held three of the Acts to be *intra vires* of the Parliament of Canada, while three of the Court held them to be *ultra vires*. In regard to the other Act—namely, the Employment and Social Insurance Act—the Chief Justice and one of his fellow judges held this Act to be also *intra vires* of the Parliament of Canada; the remaining four judges held it to be *ultra vires* and appeal was then had to the Judicial Committee of the Privy Council, whose judgment was delivered on 28th January last, declaring all four Acts *ultra vires* of the Parliament of Canada. Their Lordships concluded their judgment by stating:

'That it must not be thought that Canada was incompetent to legislate in performance of treaty obligations. In totality of legislation powers, Dominion and Provincial together, she was fully equipped; but the legislative powers remained distributed, and, if in the exercise of new functions derived from her international status she incurred obligations, they must, so far as legislation was concerned, when they dealt with provincial classes of subjects, be dealt with by the totality of powers—in other words, by co-operation between Dominions and Provinces.'

"The situation at the moment is that while all four Acts are still on the statute book, not having been repealed, nevertheless, by reason of the judgment of Judicial Committees of the Privy Council, they are inoperative.

"I give the above statement in order that this Conference may have knowledge not only of the status, as decided by the highest judicial authority in the Empire, of Social Legislation passed by the Parliament of Canada, but also with a view that this Conference might have an understanding of the necessity of the Dominion Government being fully advised by the Provincial Legislatures of their attitude to all questions coming before this Conference where legislative jurisdiction lies with the Provinces before the Dominion delegates can be in a position to express themselves in definite terms thereon. Lacking definite knowledge of the views of the Provinces on a given subject, it is not feasible for the Government delegates to take a definite stand or make a definite pronouncement."

"With regard to the attitude of the Dominion Government to the question of what action may be taken in regard to the above-mentioned legislation, I would say that a decision of the Judicial Committee of the Privy Council was the subject of debate in the House of Commons on April 5 last. On that occasion, the Hon. Mr. Lapointe, Minister of Justice, in speaking thereon, but more particularly on the question of employment and social insurance, said:

'I believe that a conference with the provinces is necessary for the purpose of continuing the work that has already been done, especially in the light of the new conditions which exist as a result of those (Privy Council) decisions . . . . It is impossible to have an unemployment insurance Act which would only be provincial in its scope. It is one of the things which cannot be worked out unless it is national in its scope. And there are other matters, more particularly with regard to labour legislation, on which it would be futile and useless to legislate unless the whole of Canada adopts the same legislation regarding them.'"

In explaining the position of the Canadian Government delegates in regard to the items on the agenda of the present Conference, Mr. Dickson observed: "All six items deal with subject matters falling within provincial jurisdiction. The questionnaires were accordingly communicated to the Provinces. The replies of the several Provinces have already appeared in the published reports, and the extent to which proposals before the Conference are favourably regarded by Provincial Governments and already in effect have also been indicated by the members of the Canadian delegation to the several Committees thereon and there is therefore not any necessity to repeat that information at this time."

Mr. Dickson emphasized that he did not desire to leave with the members of the Conference the impression that by reason of the above-mentioned decision of the Judicial Committee of the Privy Council, progress had not been made. On the contrary, there had been very definite progress in the matter of legislation for the improvement of the lot of the worker. In concluding, he outlined some of the far-reaching laws which had been enacted by the various Provincial Legislatures during the past twelve or eighteen months dealing with such matters as minimum wages, collective agreements, the right of workers to belong to labour unions, etc.

In respect to labour organization, Mr. Dickson referred to the New Year's message of the Hon. Norman McL. Rogers, Federal Minister of Labour, in which the minister expressed full endorsation of the right of the worker to join the union of his choice.

Mr. A. R. Goldie, Canadian employers' delegate, said that the Director's account of social insurance and hours of work was both interesting and illuminating, but that there was one feature which was not touched upon, and that was, who pays the cost. The fact that the cost of many of the advocated reforms is met from one source, namely, the consumer, was entirely overlooked both in the report and the debates in the Conference. He maintained that a glaring example of the lack of attention given to the consumer's interest was the discussions that had taken place regarding the 40-hour week. From the workers' side the Conference had heard that it will reduce unemployment, increase purchasing power and give more leisure to lead "the abundant life," and from the employers' side that it will upset industry both nationally and internationally, will increase costs of production and so tend to increase unemployment; but very little had been said about the person who has to pay the shot, namely, the consumer. He pointed out that, as a matter of fact, the employer is only a wage-earner, the consumer hiring him to make something for him. The employer organizes and plans the production of the article and

hires the worker to do the actual making, paying him out of the money the consumer has paid for the article, and keeping out of this money the expenses incidental to the business and a profit for himself. It is not the employer's money that pays the worker, it is the consumer's. The speaker said that it was plain that if the consumer will not pay the employer higher wages, that is more for his goods, and the latter cannot effect economies in operation, nor do what every employer hates to do, reduce wages, he simply has to close up, with resultant unemployment in at least one group of workers. He thought that everyone at the Conference was honestly trying in his way to improve conditions and make this world a better place to live in, but he thought that too much attention was being devoted to raising the standard of living in countries where the standard was comparatively high, and too little time in bettering conditions in low-standard countries, and particularly in enabling more individuals in each country actually to reach the standard already set for that country. "The only way thus to raise the average standard," he remarked, "is to increase the national income, so that there is more to divide, and the way to do this is to produce more goods of all kinds at prices that the consumer can afford to pay. . . Increased production would reduce unemployment and also result in a continual lowering of costs, so that an increasing number of people can buy. . . The bald fact remains that the workers must choose between increased income and increased leisure—they cannot have both. I do not believe that the Canadian people as a whole want more leisure, but they want more things, better homes, more food, more clothes, more automobiles, more radios. If we want them we must produce them, and we must realize that in most industries the controlling factor in production is the number of hours worked." He also stressed the need for investigating middlemen's profits.

Director's Reply

Mr. Butler, in replying to the debate on his annual report as Director, said that he believed that a general discussion of this kind was one of the most valuable features of the Conference proceedings. This year it had been particularly extensive, no less than seventy-three speakers having come to the rostrum. Among them were five Ministers of Labour—those of Finland, France, Great Britain, New Zealand and Yugoslavia, and it was perhaps not without some significance that more than one-half of the speakers came from extra-European countries. The outstanding impression left on his mind by the debate was the testimony which it furnished to the value and the standing of the International Labour Organization, and to the strength and vitality of the movement of which they were servants. The cause of social progress is no longer an affair of a few philanthropists; it has become the vital concern of Governments not merely in one or two leading countries, but in every country represented there. It semed to him that the note struck by the New Zealand Government delegate summed up the spirit of the movement when he stated: "New Zealand once held the proud position of leading the world in social reform, and we shall not be satisfied till we retain that position." Mr. Butler maintained that it was that spirit of rivalry in constructive policy, to replace the older rivalry for power, which must animate the International Labour Organization if it is to play its part worthily in the difficult days that lie before us.

A number of speakers had referred to the growth of trade unionism in certain countries. On the other hand there had been some complaints that the principle of freedom of association was not being sufficiently observed. Mr. Butler stated that no one who had read the Constitution of the Organization was likely to dispute the fact that freedom of association was one of its fundamental principles, but the power of the International Labour Office in that respect was strictly limited. Freedom of association, like freedom of speech and freedom of the press, was mainly a political matter, and there was no Convention adopted by the Conference which would warrant the Office in intervening in the internal politics of the States Members of the Organization. It was necessary to say this lest any exaggerated expectations should be aroused as to what it was possible for the Office to do; but he would add that, so far as was possible within those limitations, the Office would do what it could to make known the situation as it existed in the various countries.

The next point which impressed the Director was the obvious improvement in the economic conditions of the world. There was a welcome change of tone from the pessimism which on the whole dominated the debates of the last few years. At the same time, the repetition by a number of speakers of the economic dangers of excessive production of armaments necessarily leaves a sinister query in the mind of anybody who reads the whole of this discussion, and it was interesting to note that the fears which were expressed with regard to

armaments came not only from speakers from European countries, but also from speakers from a number of overseas countries, who, if they might possibly be outside the political danger zone, clearly did not feel that they were outside the economic danger zone. Although one or two delegates suggested that immediate consideration should be given by the Governing Body and by the International Labour Office to what steps could usefully be taken to forestall another depression, Mr. Butler thought that less attention was perhaps given to that subject than it deserves. He maintained that whether there is a considerable increase in the production of armaments or not, the possibility of another depression is not one which can be excluded. Therefore, in the near future that is likely to be one of the foremost preoccupations of countries everywhere. It involves a great social problem which can only be met by organization and by forethought. That kind of forward-thinking had already begun in some countries, he said, and the International Labour Office will certainly do its best to collect all the information available in order to indicate what progress is being made towards solving a problem which has never been solved before, and indeed which no one has ever attempted to solve before.

After referring briefly to various observations made during the discussion with regard to devaluation, economic planning, freer trade and other economic questions, the Director turned to the subject of hours of work. The arguments used in the debate were mostly the same as those repeatedly heard on previous occasions but events had now given a new force to the 40-hour week. The theories and hypotheses advanced, such as that a reduction of hours would disorganize prices, reduce production catastrophically, destroy the balance between industry and agriculture, and so on, have apparently not been borne out by the facts in the countries where hours have been reduced. A *prima facie* case in favour of the shorter working week has therefore been made out by the actual experience of a number of countries—the United States, France, New Zealand. Mr. Butler stated that he could not persuade himself that what has proved feasible and advantageous in those countries is bound to be disastrous in every other country.

The Director also referred expressly to the addresses given by the two Canadian Government delegates. He remarked that it was a matter of particular satisfaction to the Conference, he thought, that in spite of the constitutional difficulty which had developed there, no question had arisen as to Canada being constitutionally incompetent to give effect to the obligations she assumed by the ratification of some of the Conventions. The only question which has arisen relates to the manner in which those obligations are to be performed. The second point is that the Canadian Government recognizes the necessity of labour legislation being Dominion-wide in its operation. The statement of Mr. Lapointe, Dominion Minister of Justice, quoted by Mr. Dickson in his address (see above), seemed to the Director to offer some ground for expecting that Canada will succeed in overcoming in the near future the constitutional difficulties which at present impede the application of some of the Conventions which she has ratified.

After noting other points raised by various speakers, the Director concluded by stating that it was a matter for rejoicing that the work of the International Labour Office is growing rather than diminishing, that the International Labour Organization is extending its scope and power, and that it is becoming more truly world-wide in its outlook and its influence. Above all, it has emerged from a depression which threatened the foundations of social justice, strengthened by the teachings of adversity, to pursue its path with firmer faith and more conscious purpose, which "in the troubled world of to-day is no small thing, and in the future may perhaps seem a matter of far greater moment than we with our gaze confined to the present are capable of forecasting."

Election of New Governing Body

The period of office of the Governing Body elected in 1934 having expired, the election of the new Governing Body took place during the sessions of the International Labour Conference under the terms of the 1922 amendment to Article 393 of the Treaty of Versailles and the corresponding Articles of the other Treaties of Peace.

The governments of the eight countries of "chief industrial importance" in the membership of the International Labour Organization retain their seats in the Governing Body. They are (in the alphabetical order of the names in the French language): United States of America, Canada, France, Great Britain, India, Italy, Japan and Union of Soviet Socialist Republics. The Government delegates from the remaining countries represented at the Conference were called upon to elect eight members, so that of the sixteen members six should be non-European States. The eight elected were: China, Brazil, Chile, Yugoslavia, Norway, Mexico, Poland and Spain.

The Employers' delegates were required to elect eight representatives, two of whom should belong to extra-European States. Those elected were from Yugoslavia, the United States of America, India, Great Britain, South Africa, France, Denmark and Italy. In addition to the regular members, ten deputy members were elected respectively from Japan, Switzerland, Belgium, Czechoslovakia, Netherlands, Poland, Spain, Austria, Argentine Republic and China, but in no case will more than eight attend the Governing Body at the same time.

The Workers' delegates were also required to elect eight representatives, two of whom should be non-European. Those elected were from France, Belgium, Great Britain, India, Spain, Sweden, Japan and the United States. Eight deputy members were also elected, respectively from Switzerland, Denmark, Netherlands, Czechoslovakia, Canada, Poland, Australia, and Yugoslavia; together with substitute members from Mexico, the Argentine, South Africa, New Zealand, Luxemburg, Norway, Hungary and China.

It will be noted that besides being included in the Government group, Canada has a deputy membership in the Workers' group through the election of Mr. P. M. Draper, President of the Trades and Labour Congress of Canada, Ottawa.

The full texts of the Draft Conventions and of the Recommendations adopted by the Conference follow:—

DRAFT CONVENTION CONCERNING SAFETY PROVISIONS IN THE BUILDING INDUSTRY

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on June 3, 1937, and

Considering that building work gives rise to serious accident risks which it is necessary to reduce both on humanitarian and on economic grounds, and

Having decided upon the adoption of certain proposals with regard to safety provisions for workers in the building industry with reference to scaffolding and hoisting machinery, which is the first item on the Agenda of the Session, and

Considering that, in view of the desirability of standardizing minimum safety provisions without prescribing requirements too rigid for general application, the most appropriate form for these proposals is that of a Draft International Convention accompanied by a Recommendation embodying a Model Code of Safety Regulations,

adopts this 23rd day of June of the year one thousand nine hundred and thirty-seven, the following Draft Convention which may be cited as the Safety Provisions (Building) Convention, 1937:

PART I.—OBLIGATIONS OF PARTIES TO CONVENTION

Article 1

1. Each Member of the International Labour Organization which ratifies this Convention undertakes that it will maintain in force laws or regulations—

(*a*) which ensure the application of the General Rules set forth in Parts II to IV of this Convention; and

(*b*) in virtue of which an appropriate authority has power to make regulations for the purpose of giving such effect as may be possible and desirable under national conditions to the provisions of, or provisions equivalent to the provisions of, the Model Code annexed to the Safety Provisions (Building) Recommendation, 1937, or any revised Model Code subsequently recommended by the International Labour Conference.

2. Each such Member further undertakes that it will communicate every third year to the International Labour Office a report indicating the extent to which effect has been given to the provisions of the Model Code annexed to the Safety Provisions (Building) Recommendations, 1937, or of any revised Model Code subsequently recommended by the International Labour Conference.

Article 2

1. The laws or regulations for ensuring the application of the General Rules set forth in Parts II to IV of this Convention shall apply to all work done on the site in connection with the construction, repair, alteration, maintenance and demolition of all types of buildings.

2. The said laws or regulations may provide that the competent authority may, after consultation with the organizations of employers and workers concerned where such exist, exempt from all or any of their provisions work of such a character that reasonably safe conditions normally obtain.

Article 3

The laws or regulations for ensuring the application of the General Rules set forth in Parts II to IV of this Convention, and regulations made by the appropriate authority for the purpose of giving effect to the Model Code annexed to the Safety Provisions (Building) Recommendation, 1937, shall—

(*a*) require employers to bring them to the notice of all persons concerned in a manner approved by the competent authority;

(*b*) define the persons responsible for compliance therewith; and

(*c*) prescribe adequate penalties for any violation thereof.

Article 4

Each Member which ratifies this Convention undertakes to maintain, or satisfy itself that there is maintained, a system of inspection adequate to ensure the effective enforcement of its laws and regulations relating to safety precautions in the building industry.

Article 5

1. In the case of a Member the territory of which includes large areas where, by reason of the sparseness of the population or the stage of economic development of the area, the competent authority considers it impracticable to enforce the provisions of this Convention, the authority may exempt such areas from the application of the Convention either generally or with such exceptions in respect of particular localities of particular kinds of building operations as it thinks fit.

2. Each Member shall indicate in its first annual report upon the application of this Convention submitted under Article 22 of the Constitution of the International Labour Organisation any areas in respect of which it proposes to have recourse to the provisions of the present Article and no Member shall, after the date of its first annual report, have recourse to the provisions of the present Article except in respect of areas so indicated.

3. Each Member having recourse to the provisions of the present Article shall indicate in subsequent annual reports any areas in respect of which it renounces the right to have recourse to the provisions of the present Article.

Article 6

Each Member which ratifies this Convention undertakes to communicate annually to the International Labour Office the latest statistical information relating to the number and classification of accidents occurring to persons occupied on work within the scope of this Convention.

PART II—GENERAL RULES AS TO SCAFFOLDS

Article 7

1. Suitable scaffolds shall be provided for workmen for all work that cannot be safely done from a ladder or by other means.

2. A scaffold shall not be constructed, taken down, or substantially altered, except—

(*a*) under the supervision of a competent and responsible person; and

(*b*) as far as possible by competent workers possessing adequate experience in this kind of work.

3. All scaffolds and appliances connected therewith and all ladders shall—

(*a*) be of sound material;

(*b*) be of adequate strength having regard to the loads and strains to which they will be subjected; and

(*c*) be maintained in proper condition.

4. Scaffolds shall be so constructed that no part thereof can be displaced in consequence of normal use.

5. Scaffolds shall not be overloaded and so far as practicable the load shall be evenly distributed.

6. Before installing lifting gear on scaffolds special precautions shall be taken to ensure the strength and stability of the scaffolds.

7. Scaffolds shall be periodically inspected by a competent person.

8. Before allowing a scaffold to be used by his workmen every employer shall, whether the scaffold has been erected by his workmen or not, take steps to ensure that it complies fully with the requirements of this Article.

Article 8

1. Working platforms, gangways and stairways shall—

(*a*) be so constructed that no part thereof can sag unduly or unequally;

(*b*) be so constructed and maintained, having regard to the prevailing conditions, as to reduce as far as practicable risks of persons tripping or slipping; and

(*c*) be kept free from any unnecessary obstruction.

2. In the case of working platforms, gangways, working places and stairways at a height exceeding that to be prescribed by national laws or regulations—

(*a*) every working platform and every gangway shall be closely boarded unless other adequate measures are taken to ensure safety;

(*b*) every working platform and gangway shall have adequate width; and

(*c*) every working platform, gangway, working place and stairway shall be suitably fenced.

Article 9

1. Every opening in the floor of a building or in a working platform shall, except for the time and to the extent required to allow the access of persons or the transport or shifting of material, be provided with suitable means to prevent the fall of persons or material.

2. When persons are employed on a roof where there is a danger of falling from a height exceeding that to be prescribed by national laws or regulations, suitable precautions shall be taken to prevent the fall of persons or material.

3. Suitable precautions shall be taken to prevent persons being struck by articles which might fall from scaffolds or other working places.

Article 10

1. Safe means of access shall be provided to all working platforms and other working places.

2. Every ladder shall be securely fixed and of such length as to provide secure handhold and foothold at every position at which it is used.

3. Every place where work is carried on and the means of approach thereto shall be adequately lighted.

4. Adequate precautions shall be taken to prevent danger from electrical equipment.

5. No materials on the site shall be so stacked or placed as to cause danger to any person.

PART III—GENERAL RULES AS TO HOISTING APPLIANCES

Article 11

1. Hoisting machines and tackle, including their attachments, anchorages and supports, shall—

(*a*) be of good mechanical construction, sound material and adequate strength and free from patent defect; and

(*b*) be kept in good repair and in good working order.

2. Every rope used in hoisting or lowering materials or as a means of suspension shall be of suitable quality and adequate strength and free from patent defect.

Article 12

1. Hoisting machines and tackle shall be examined and adequately tested after erection on the site and before use and be re-examined in position at intervals to be prescribed by national laws or regulations.

2. Every chain, ring, hook, shackle, swivel and pulley block used in hoisting or lowering materials or as a means of suspension shall be periodically examined.

Article 13

1. Every crane driver or hoisting appliance operator shall be properly qualified.

2. No person under an age to be prescribed by national laws or regulations shall be in control of any hoisting machine, including any scaffold winch, or give signals to the operator.

Article 14

1. In the case of every hoisting machine and of every chain, ring, hook, shackle, swivel and pulley block used in hoisting or lowering or as a means of suspension the safe working load shall be ascertained by adequate means.

2. Every hoisting machine and all gear referred to in the preceding paragraph shall be plainly marked with the safe working load.

3. In the case of a hoisting machine having a variable safe working load each safe working load and the conditions under which it is applicable shall be clearly indicated.

4. No part of any hoisting machine or of any gear referred to in paragraph 1 of this Article shall be loaded beyond the safe working load except for the purpose of testing.

Article 15

1. Motors, gearing, transmissions, electric wiring and other dangerous parts of hoisting application shall be provided with efficient safeguards.

2. Hoisting appliances shall be provided with such means as will reduce to a minimum the risk of the accidental descent of the load.

3. Adequate precautions shall be taken to reduce to a minimum the risk of any part of a suspended load becoming accidentally displaced.

PART IV—GENERAL RULES AS TO SAFETY EQUIPMENT AND FIRST AID

Article 16

1. All necessary personal safety equipment shall be kept available for the use of the persons employed on the site and be maintained in a condition suitable for immediate use.

2. The workers shall be required to use the equipment thus provided and the employer shall take adequate steps to ensure proper use of the equipment by those concerned.

Article 17

When work is carried on in proximity to any place where there is a risk of drowning, all necessary equipment shall be provided and kept ready for use and all necessary steps shall be taken for the prompt rescue of any person in danger.

Article 18

Adequate provision shall be made for prompt first-aid treatment of all injuries likely to be sustained during the course of the work.

PART V—FINAL PROVISIONS

Article 19

The formal ratifications of this Convention shall be communicated to the Secretary-General of the League of Nations for registration.

Article 20

1. This Convention shall be binding only upon those Members of the International Labour Organisation whose ratifications have been registered with the Secretary-General.

2. It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Secretary-General.

3. Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

Article 21

As soon as the ratifications of two Members of the International Labour Organisation have been registered, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organisation. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organisation.

Article 22

1. A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered.

2. Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

Article 23

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

Article 24

1. Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides:

(*a*) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 22 above, if and when the new revising Convention shall have come into force;

(*b*) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

2. This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

Article 25

The French and English texts of this Convention shall both be authentic.

RECOMMENDATION CONCERNING SAFETY PROVISIONS IN THE BUILDING INDUSTRY

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on 3rd June, 1937, and

Having decided upon the adoption of certain proposals with regard to safety provisions for workers in the building industry with reference to scaffolding and hoisting machinery, which is the first item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Draft International Convention accompanied by a Recommendation embodying a Model Code of Safety Regulations,

adopts, this 23rd day of June of the year one thousand nine hundred and thirty-seven, the following Recommendation which may be cited as the Safety Provisions (Building) Recommendation, 1937:

Whereas it is desirable, with a view to intensifying the efforts being made by the Members of the Organization to reduce the risk of accident in the building industry, to submit for their consideration model safety provisions and to arrange for an exchange upon an international scale of the experience acquired in the application of these provisions;

Whereas the Safety Provisions (Building) Convention, 1937, embodies a series of general principles which require to be supplemented by detailed safety regulations;

Whereas it is therefore desirable that Members of the Organization which ratify that Convention should have at their disposal a Model Code of safety regulations which have been proved by experience to be calculated to reduce the risk of accidents; and

Whereas it is also desirable that such a Model Code should be available for the guidance of any Members which may be unable to ratify immediately the Safety Provisions (Building) Convention, 1937;

The Conference recommends that:

1. Each Member of the International Labour Organization should give the fullest effect possible and desirable under national conditions to the provisions of, or provisions equivalent to the provisions of, the annexed Model Code.

2. Any Members of the International Labour Organization which have not ratified the Safety Provisions (Building) Convention, 1937, should communicate every third year to the International Labour Office on a voluntary basis a report indicating the extent to which effect has been given to the Model Code.

(Appended to the convention is a comprehensive model code of 41 regulations covering every detail of construction work under the following sections: (1) Scaffolds; (2) hoisting appliances; (3) safety equipment and first aid; (4) miscellaneous.)

RECOMMENDATION CONCERNING INSPECTION IN THE BUILDING INDUSTRY

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on 3rd June, 1937, and

Having decided upon the adoption of certain proposals with regard to inspection in the building industry which is included in the first item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this 23rd day of June of the year one thousand nine hundred and thirty-seven, the following Recommendation which may be cited as the Inspection (Building) Recommendation, 1937:

Whereas the Safety Provisions (Building) Convention, 1937, and the Safety Provisions (Building) Recommendations, 1937, contain provisions relating to labour inspection;

Whereas the Conference adopted at its Fifth Session (1923) a Recommendation concerning labour inspection;

Whereas it is nevertheless desirable that as regards the building industry the attention of Members should be drawn to certain other provisions not included in the above-mentioned Convention and Recommendations;

The Conference recommends that each Member of the International Labour Organization should take the following principles and rules into consideration as regards inspection in the building industry:

1. All work in connection with the construction, repair, alteration, maintenance and demolition of buildings of all kinds should be subject to inspection.

2. The authority responsible for inspection (hereinafter called the inspection authority) should be a public body and should have all powers necessary to ensure that the laws and regulations in force are strictly applied.

3. Inspectors should have previous technical training and have passed examinations covering all suitable technical and administrative matters which should ensure that they are competent to supervise effectively the enforcement of the safety regulations for the workers employed in the building industry.

4. In order to ensure effective collaboration between the inspection authority and the head of the undertaking, national laws or regulations should make the head of the undertaking responsible—

(*a*) for providing for constant and adequate supervision of the work so as to ensure compliance with the safety provisions in force;

(*b*) for taking all other practicable steps necessary to prevent accidents, and in particular for not employing on work likely to involve risk of accidents any person whom he knows to be deaf, of defective vision, or liable to giddiness;

(*c*) for informing the inspection authority, in conformity with the national laws or regulations, of the commencement of all building operations undertaken by him; and

(*d*) for reporting to the competent authority, in accordance with the national laws or regulations, accidents occurring in the undertaking.

RECOMMENDATION CONCERNING CO-OPERATION IN ACCIDENT PREVENTION IN THE BUILDING INDUSTRY

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on 3rd June, 1937, and

Having decided upon the adoption of certain proposals with regard to co-operation in accident prevention in the building industry, which is included in the first item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this 23rd day of June of the year one thousand nine hundred and thirty-seven, the following Recommendation which may be cited as the Co-operation in Accident Prevention (Building) Recommendation, 1937:

Whereas it is considered that in addition to the Safety Provisions (Building) Convention, 1937, the Safety Provisions (Building) Recommendation, 1937, the Inspection (Building) Recommendation, 1937, and the Prevention of Industrial Accidents Recommendation, 1929, it is desirable to make a specific recommendation concerning the prevention of accidents in the building industry by means of safety organizations:

The Conference recommends that each Member of the International Labour Organization should take the following principles and rules into consideration in connection with accident prevention in the building industry:

1. There should be established safety organizations within the industry to secure the collaboration of all concerned in effecting a reduction in the number and severity of accidents with particular regard to accident risks for which there are no statutory requirements.

2. In order to render this collaboration effective there should be set up within each undertaking, where it is possible, a special safety organization including representatives of the employer and the persons employed.

3. It would also be desirable to have direct collaboration between the competent inspector, the employer and the representatives of the persons employed in the undertaking in the form and within the limits fixed by the inspection authority.

4. Safety propaganda in the building industry would be more effective if there were constant co-operation between the inspection authority and all the organizations concerned: safety organizations (joint or separate) of employers and workers; trade unions and employers' associations; associations of architects or engineers; standards associations, etc.; accident insurance institutions (public, semi-official or private).

5. (1) Periodical meetings should be held by representatives of the organizations mentioned in the preceding paragraph and representatives of the inspection authority, together with representatives of any other public bodies concerned.

(2) The purpose of such meetings should be to examine jointly the methods that might be taken to improve accident prevention in the building industry.

6. The inspection authority should promote accident prevention by collaborating with all parties concerned in the necessary propaganda, which might take such forms as safety education by training courses, demonstrations, meetings, lectures and films, the distribution of manuals, pamphlets, magazines or publications reproducing or analyzing accident statistics; and the distribution of posters and notices which should as far as possible be illustrated.

RECOMMENDATION CONCERNING VOCATIONAL EDUCATION FOR THE BUILDING INDUSTRY

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on 3rd June, 1937, and

Having decided upon the adoption of certain proposals with regard to vocational education for the building industry, which is included in the first item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this 23rd day of June of the year one thousand nine hundred and thirty-seven, the following Recommendation which may be cited as the Vocational Education (Building) Recommendation, 1937:

The Conference,

Recalling that at its Twelfth Session (1929) it adopted a Recommendation concerning the prevention of industrial accidents, one part of which deals with vocational education;

Considering that, in view of the risk of accident, vocational education is of special importance in the case of the industry;

Recommends that technical and vocational school curricula relating to the building industry should include theoretical and practical instruction concerning—

(*a*) the materials used for the construction of scaffolds and the principles of erecting and maintaining scaffolds;

(*b*) the construction and maintenance of the hoisting appliances used in the building industry;

(*c*) the organization and supervision of safety measures on building sites; and

(*d*) the safety regulations for building work.

DRAFT CONVENTION CONCERNING THE REDUCTION OF HOURS OF WORK IN THE TEXTILE INDUSTRY

The General Conference of the International Labour Organization,

Having met at Geneva in its Twenty-third Session on 3rd June, 1937;

Considering that the question of the reduction of hours of work in the textile industry is the second item on the Agenda of the Session;

Confirming the principle laid down in the Forty-hour Week Convention, 1935, including the maintenance of the standard of living;

Considering it to be desirable that this principle should be applied by international agreement to the textile industry;

adopts this 22nd day of June, one thousand nine hundred and thirty-seven, the following Draft Convention which may be cited as the Reduction of Hours of Work (Textiles) Convention, 1937:

Article 1

1. This Convention applies to—

(*a*) persons employed in an undertaking which fulfils the condition stated in paragraph 2 of this Article, including persons employed in any branch of such an undertaking which branch does not fulfil that condition; and

(*b*) persons employed in a branch of an undertaking which branch fulfils the condition stated in paragraph 2 of this Article, even though the undertaking does not fulfil that condition.

2. The condition referred to in the preceding paragraph is that the undertaking or branch of an undertaking is engaged wholly or mainly in one or more of the series of operations delimited in paragraphs 3, 4 and 5 of this Article in the course of the manufacture of any kind of thread, yarn, twine, cord, rope, netting or felt, or any woven, piled, knitted or lacework fabric from any one or more of the following materials: cotton, wool, silk, flax, hemp, jute, rayon or other synthetic fibre, or any other textile material whether of vegetable, animal or mineral origin.

3. The series of operations referred to in paragraph 2 of this Article begins—

(*a*) in the case of cotton, with the reception of the bales of ginned cotton for breaking up and cleaning;

(*b*) in the case of wool, with the reception of the raw wool for sorting and cleaning (excluding the process of anthrax disinfection);

(*c*) in the case of silk, with the reeling of the silk from the cocoon or the steeping of the silk waste;

(*d*) in the case of flax, jute and hemp, with the operation of retting, except where this operation is effected as work accessory to that of an agricultural undertaking;

(*e*) in the case of rayon or other synthetic fibre, with the reception of the materials used in the chemical production of the fibre;

(*f*) in the case of rags, with the sorting of the rags or the reception of the sorted rags; and

(*g*) in the case of any other textile material, with the operation prescribed by the competent authority as corresponding to the operations set out above.

4. The series of operations referred to in paragraph 2 of this Article includes the operations of bleaching, dyeing, printing, and finishing and similar operations, and ends with the packing and despatch of the products specified in that paragraph.

5. The series of operations referred to in paragraph 2 of this Article includes the making in whole or in part of any garment or other article only in the following cases:

(*a*) the case of hosiery manufacture; and

(*b*) cases in which the garment or other article is made by the same process as the fabric thereof.

6. In any case in which it is doubtful whether an undertaking or branch of an undertaking fulfils the condition stated in paragraph 2 of this Article, the question shall be determined by the competent authority after consultation with the organizations of employers and workers concerned where such exist.

7. Where and so long as the principle of a forty-hour week is applied to persons to whom this Convention applies in accordance with the provisions of any international labour Convention other than this Convention, the competent authority may exclude such persons from the application of this Convention.

8. This Convention applies to persons employed in both public and private undertakings.

Article 2

The competent authority may, after consultation with the organizations of employers and workers concerned where such exist, exempt from the application of this Convention—

(*a*) persons employed in undertakings in which only members of the employer's family are employed;

(*b*) classes of persons who by reason of their special responsibilities are not subjected to the normal rules governing the length of the working week.

Article 3

1. For the purpose of this Convention the term "hours of work" means the time during which the persons employed are at the disposal of the employer and does not include rest periods during which they are not at his disposal.

2. Where at the date of the adoption of this Convention it is the practice not to regard time spent in the cleaning or oiling of machines as part of ordinary working time, the competent authority may permit any time not exceeding one-and-a-half hours in any week which is so spent to be disregarded in reckoning for the purpose of this Convention the hours of work of the persons concerned.

Article 4

1. The hours of work of persons to whom this Convention applies shall not exceed an average of forty per week.

2. In the cases of persons who work in successive shifts on processes required by reason of the nature of the process to be carried on without a break at any time of the day, night or week, weekly hours of work may average forty-two.

3. The competent authority shall, after consultation with the organizations of employers and workers concerned where such exist, de-

termine the processes to which paragraph 2 of this Article applies.

4. Where hours of work are calculated as an average, the competent authority shall, after consultation with the organizations of employers and workers concerned where such exist, determine the number of weeks over which the average may be calculated and the maximum number of hours that may be worked in any week.

Article 5

The competent authority may, by regulations made after consultation with the organizations of employers and workers concerned where such exist, provide that the limits of hours authorized by the preceding Article may be exceeded to an extent prescribed by such regulations in the case of—

(*a*) persons employed on preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of the undertaking, branch or shift;

(*b*) persons employed in occupations which by their nature involve long periods of inaction during which the said persons have to display neither physical activity nor sustained attention or remain at their posts only to reply to possible calls;

(*c*) persons employed in connection with the transport, delivery or loading or unloading of goods.

Article 6

1. The limits of hours authorized by the preceding Articles may be exceeded, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking.

(*a*) in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of *force majeure;*

(*b*) in order to make good the unforeseen absence of one or more members of a shift.

2. The employer shall notify the competent authority without delay of all time worked in virtue of this Article and of the reasons therefor.

Article 7

1. The limits of hours authorized by the preceding Articles may be exceeded in cases where the continued presence of particular persons is necessary for the completion of a bleaching, dyeing, finishing or other operation, or of a succession of such operations, which for technical reasons cannot be interrupted without damage to the material worked and which by reason of exceptional circumstances it has not been possible to complete within the normal limit of hours.

2. The competent authority shall, after consultation with the organizations of employers and workers concerned where such exist, determine the operations to which and the conditions subject to which the preceding paragraph applies and the maximum number of hours which may be worked in virtue of that paragraph by the persons concerned.

Article 8

1. Upon application by an employer, the competent authority may, after consultation with the organizations of employers and workers concerned where such exist, grant an allowance of overtime for specified classes of persons in exceptional cases in which overtime on one or more operations is necessary in order to enable the workers engaged in subsequent operations in the same undertaking to be employed up to the authorized limits of hours.

2. The competent authority shall determine, after consultation with the organizations of employers and workers concerned where such exist, the maximum number of hours of overtime which may be worked in virtue of paragraph 1 of this Article, so, however, that no such allowance shall permit of any person being employed for more than sixty hours of such overtime in any year or for more than four hours of such overtime in any week.

3. Overtime worked in virtue of this Article shall be remunerated at not less than one-and-a-quarter times the normal rate.

4. The competent authority may attach to the grant of an allowance of overtime such conditions as it deems expedient with a view to securing a progressive reduction in the amount of overtime.

Article 9

1. The competent authority may permit the limits of hours authorized by the preceding Articles to be exceeded subject to the conditions that—

(*a*) all time worked in virtue of this Article shall be regarded as overtime and shall be remunerated at not less than one-and-a-quarter times the normal rate; and

(*b*) no person shall be employed in virtue of this Article for more than seventy-five hours of overtime in any year.

2. In cases in which national laws or regulations apply the weekly limit of hours as a strict limit applicable to each week, the competent authority may permit not more than one hundred additional hours of overtime in any year to be worked, subject to the condition that such additional hours of overtime shall be remunerated at not less than one-and-a-quarter times the normal rate.

3. When granting permission in virtue of the preceding paragraphs, the competent authority shall satisfy itself that there will be no consistent working of overtime.

4. The competent authority shall only grant permission to work overtime in virtue of this Article in accordance with regulations made after consultation with the organizations of employers and workers concerned where such exist.

5. The regulations referred to in the preceding paragraph shall prescribe—

(*a*) the procedure by which permission may be granted to employers to work overtime in virtue of this Article; and

(*b*) the maximum number of hours for which the competent authority may grant permission and the minimum overtime rate to be paid for such hours.

Article 10

In order to facilitate the effective enforcement of the provisions of this Convention every employer shall—

(*a*) notify in a manner approved by the competent authority by the posting of notices or otherwise,

(i) the hours at which work begins and ends;

(ii) where work is carried on by shifts, the hours at which each shift begins and ends;

(iii) where a rotation system is applied, a description of the system including a time-table for each person or group of persons;

(iv) the arrangements made in cases where the average duration of the working week is calculated over a number of weeks; and

(v) effective rest periods as defined in Article 3; and

(*b*) keep a record in the form prescribed by the competent authority of all additional hours worked in virtue of Articles 7, 8 and 9 of this Convention and of the payments made in respect thereof.

Article 11

Any Member may suspend the operation of the provisions of this Convention during any emergency which endangers the national safety.

Article 12

During a period which shall not exceed two years from the coming into force of this Convention for the Member concerned, the competent authority may approve transitional arrangements in virtue of which,

(*a*) the reduction of hours of work to the limits authorized by the preceding Articles may be accomplished by stages during the said period;

(*b*) specified classes of workers or undertakings may be exempted from all or any of the provisions of the Convention during the said period.

Article 13

The annual reports upon the application of this Convention to be submitted by Members under Article 22 of the Constitution of the International Labour Organization shall include more particularly full information concerning,

(*a*) decisions taken in virtue of Article 1, paragraph 3 (*g*);

(*b*) exemptions made in virtue of Article 2, and any conditions subject to which such exemptions are made;

(*c*) any recourse to the provisions of Article 3, paragraph 2;

(*d*) determinations made in pursuance of Article 4, paragraph 4;

(*e*) regulations made in virtue of Article 5;

(*f*) determinations made in pursuance of Article 7, paragraph 2;

(*g*) allowances of overtime granted in virtue of Article 8; and

(*h*) the extent to which recourse has been had to the provisions of Article 9.

Article 14

In accordance with paragraph 11 of Article 19 of the Constitution of the International Labour Organization, nothing in this Convention shall affect any law, award, custom or agreement between employers and workers which ensures more favourable conditions to the workers than those provided for by this Convention.

Article 15

In the event of the Conference adopting a further Convention determining such modifications of the provisions of this Convention as may be required to meet the case of countries to which Article 19, paragraph 3, of the Constitution of the International Labour Organization applies, this Convention and the aforesaid further Convention shall be deemed to form one Convention.

(The provisions of Articles 16 to 22 respecting ratification of this Convention are identical with those detailed above in the Draft Convention concerning Safety Provisions in the Building Industry—Articles 19 to 25.)

RECOMMENDATION CONCERNING INTERNATIONAL CO-OPERATION IN RESPECT OF PUBLIC WORKS

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on 3rd June, 1937, and

Having decided upon the adoption of certain proposals with regard to international co-operation in respect of public works, which is included in the third item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this 22nd day of June of the year one thousand nine hundred and thirty-seven, the following Recommendation which may be cited as the Public Works (International Co-operation) Recommendation, 1937:

Whereas the advance planning of public works is a useful method of preventing unemployment and counteracting economic fluctuations; and

Whereas action for this purpose can be effective only if it is based on adequate information and international co-operation;

The Conference recommends that:

1. Each Member of the International Labour Organization should communicate annually to the International Labour Office, on the most suitable date, statistical and other information concerning public works undertaken or planned on its territory, including orders for plant, equipment and supplies.

2. The information communicated by Members in accordance with paragraph 1 should be supplied as far as possible in accordance with a uniform plan relating more particularly to the expenditure involved, the method of financing the works and the number of workers engaged.

3. Each Member should co-operate in the work of any international committee which may be set up by the Governing Body of the International Labour Office for the purpose, more particularly, of studying the information communicated in accordance with paragraph 1 and preparing the uniform plan referred to in paragraph 2.

4. Each Member should carefully consider what action to take on the basis of any reports which the Governing Body of the International Labour Office may send it as a result of the discussions of the committee contemplated by paragraph 3.

RECOMMENDATION CONCERNING THE NATIONAL PLANNING OF PUBLIC WORKS

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on 3rd June, 1937, and

Having decided upon the adoption of certain proposals with regard to the national planning of public works, which is included in the third item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this 22nd day of June of the year one thousand nine hundred and thirty-seven, the following Recommendation which may be cited as the Public Works (National Planning) Recommendation, 1937:

Whereas in the absence of advance planning expenditure on public works tends to increase in years of prosperity and to diminish in years of depression;

Whereas fluctuations in the volume of employment of workers engaged on public works are thereby superimposed on the fluctuations in the volume of employment arising out of commercial demand, thus aggravating successively the shortage of certain classes of workers in periods of prosperity and the extent of unemployment in periods of depression;

Whereas it is desirable to time public works in such a way as to reduce industrial fluctuations as far as possible;

Whereas the uniform application of such a policy of timing to all public works involves the co-ordination of the administrative and financial methods applied by the various authorities; and

Whereas it is also desirable, if public works are to be fully effective as a remedy for unemployment, that measures should be adopted relating to the conditions of recruitment and employment of the workers engaged on the works;

The Conference recommends that each Member should apply the following principles:

PART I—TIMING OF PUBLIC WORKS

1. (1) Appropriate measures should be adopted for the purpose of achieving a suitable timing of all works undertaken or financed by public authorities.

(2) This timing should involve an increase in the volume of such works in periods of depression and for this purpose it is desirable to provide for the preparation in advance, during periods of prosperity, of works capable of being held in reserve or exceeding ordinary requirements and which should be ready for execution as soon as the need is felt.

(3) Special attention should be paid to public works which stimulate heavy industries or public works which create a more direct demand for consumers' goods as changing economic conditions may require.

2. The policy of timing public works should apply to all such works (including works in colonies) undertaken by central authorities, regional or local authorities, public utility undertakings, or any body or individual in receipt of subsidies or loans from a public authority.

3. There should be established a national co-ordinating body the duties of which should be, more particularly—

(*a*) to centralize information relating to the various kinds of public works;

(*b*) to ensure or encourage the preparation of works in advance;

(*c*) to give instructions or advice as to when works should be held in reserve and when works held in reserve should be undertaken, account being taken of fluctuations in the volume of unemployment, changes in the index of wholesale prices, changes in the rate of interest and any changes in other indices which indicate an alteration in the economic situation.

PART II—FINANCING OF PUBLIC WORKS

4. Among the financial measures necessitated by the policy embodied in the present Recommendation the following should receive special consideration:

(*a*) the placing to reserve in periods of prosperity of the resources necessary for carrying out works prepared for periods of depression;

(*b*) the carrying forward of unexpended balances from one year to another;

(*c*) restricted borrowing by public authorities in periods of prosperity and accelerated repayment of loans previously contracted;

(*d*) the financing by loan in periods of depression of public works likely to stimulate economic recovery, and, generally speaking, the application of a monetary policy which will make possible the expansion of credit required at such a time for the speeding up of the public works and which will ensure the lowest possible rate of interest on the loans.

5. The co-ordinating body provided for in paragraph 3 or a special body acting in co-operation with it should be entrusted with all or some of the following duties in connection with the financing of public works:

(*a*) to advise the central authority on financial policy and, if necessary, taxation policy relating to public works;

(*b*) to assist in achieving proper co-ordination between the credit policy and market operations of the central bank, or corresponding institution, and the public works policy of the Government;

(*c*) to co-ordinate the borrowing policy of the different public bodies referred to in paragraph 2; and

(*d*) to take such measures as may be necessary to ensure that the policy of the central authority in respect of loans and subsidies is made effective.

PART III—EMPLOYMENT OF CERTAIN CLASSES OF WORKERS

6. In applying the policy of timing provided for in this Recommendation, consideration should be given to the possibility of including works which will give employment to special classes of workers such as young workers, women and non-manual workers.

PART IV—CONDITIONS OF RECRUITMENT AND EMPLOYMENT

7. The recruitment of workers for employment on public works should be effected for preference through the public employment exchanges.

8. Foreign workers authorized to reside in the country concerned should be accepted for employment on public works in the same conditions as nationals, subject to reciprocal treatment.

9. The rates of wages of workers on public works should be not less favourable than those commonly recognized by workers' organizations and employers for work of the same character in the district where the work is carried out; where there are no such rates recognized or prevailing in the district, those recognized or prevailing in the nearest district in which the general industrial circumstances are similar should be adopted, subject to the condition that the rates should in any case be such as to ensure to the workers a reasonable standard of life as this is understood in their time and country.

RESOLUTION ON INTERNATIONAL CO-OPERATION CONCERNING PUBLIC WORKS

Whereas the International Labour Conference has adopted a Recommendation on international co-operation concerning public works; and

Whereas it is desirable, in order to make such co-operation effective, to set up an international body for the purpose of ensuring the continuity of the co-operation and of determining the methods of applying it;

1. The Conference invites the Governing Body of the International Labour Office to appoint as soon as possible, and to convene without delay, an international public works committee, the duties of which should be more particularly:

(*a*) to prepare and periodically to revise the uniform plan referred to in paragraph 2 of the Recommendation on international co-operation concerning public works;

(*b*) to study every year the information gathered by the International Labour Office either as a result of the Recommendation referred to above or in any other way;

(*c*) to make reports on this subject to the Governing Body of the International Labour Office with a view to their transmission to the Members of the Organization;

(*d*) to undertake any other duties relating to public works which may be entrusted to it;

2. Members which have declared themselves willing to give effect to the above-mentioned Recommendation should be invited to send representatives to the committee.

The committee should also include employers' and workers' representatives in equal numbers.

The Governing Body of the International Labour Office should invite representatives of the competent bodies of the League of Nations to participate in the work of the committee, and might, in so far as it thinks fit, attach to the committee representatives of international institutions or bodies concerned with this matter as well as national and international experts chosen for their special knowledge of the various aspects of the problem of public works.

DRAFT CONVENTION FIXING THE MINIMUM AGE FOR ADMISSION OF CHILDREN TO INDUSTRIAL EMPLOYMENT (REVISED 1937)

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-Third Session on June 3, 1937, and

Having decided upon the adoption of certain proposals with regard to the partial revision of the Convention fixing the minimum age for admission of children to industrial employment adopted by the Conference at its First Session, which is the Sixth item on the Agenda of the Session, and

Considering that the proposals must take the form of a Draft International Convention,

adopts, this 22nd day of June of the year one thousand nine hundred and thirty-seven, the following Draft Convention which may be cited as the Minimum Age (Industry) Convention (Revised), 1937:

PART I.—GENERAL PROVISIONS

Article 1

For the purpose of this Convention, the term "industrial undertaking" includes particularly:

(*a*) Mines, quarries, and other works for the extraction of minerals from the earth.

(*b*) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including ship-building, and the generation, transformation, and transmission of electricity and motive power of any kind.

(*c*) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbour, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, water-work, or other work of construction, as well as the preparation for or laying the foundations of any such work or structure.

(*d*) Transport of passengers or goods by road or rail or inland waterway, including the handling of goods at docks, quays, wharves, and warehouses, but excluding transport by hand.

2. The competent authority in each country shall define the line of division which separates industry from commerce and agriculture.

Article 2

1. Children under the age of fifteen years shall not be employed or work in any public or private industrial undertaking, or in any branch thereof.

2. Provided that, except in the case of employments which, by their nature or the circumstances in which they are carried on, are dangerous to the life, health or morals of the persons employed therein, national laws or regulations may permit such children to be employed in undertakings in which only members of the employer's family are employed.

Article 3

The provisions of this Convention shall not apply to work done by children in technical schools, provided that such work is approved and supervised by public authority.

Article 4

In order to facilitate the enforcement of the provisions of this Convention, every employer in an industrial undertaking shall be required to keep a register of all persons under the age of eighteen years employed by him, and of the dates of their births.

Article 5

1. In respect of employments which, by their nature or the circumstances in which they are carried on, are dangerous to the life, health or morals of the persons employed therein, national laws shall either—

(*a*) prescribe a higher age or ages than fifteen years for the admission thereto of young persons or adolescents; or

(*b*) empower an appropriate authority to prescribe a higher age or ages than fifteen years for the admission thereto of young persons or adolescents.

2. The annual reports to be submitted under Article 22 of the Constitution of the International Labour Organization shall include full information concerning the age or ages prescribed by national laws in pursuance of sub-paragraph (*a*) of the preceding paragraph or concerning the action taken by the appropriate authority in exercise of the powers conferred upon it in pursuance of sub-paragraph (*b*) of the preceding paragraph, as the case may be.

PART II.—SPECIAL PROVISIONS FOR CERTAIN COUNTRIES

Article 6

1. The provisions of this Article shall be applicable in Japan in substitution for the provisions of Articles 2 and 5.

2. Children under the age of fourteen years shall not be employed or work in any public or private industrial undertaking, or in any branch thereof: Provided that national laws or regulations may permit such children to be employed in undertakings in which only members of the employer's family are employed.

3. Children under the age of sixteen years shall not be employed or work on dangerous or unhealthy work as defined by national laws or regulations in mines or factories.

Article 7

1. The provisions of Articles 2, 4 and 5 shall not apply to India, but in India the following provisions shall apply to all territories in respect of which the Indian Legislature has jurisdiction to apply them.

2. Children under the age of twelve years shall not be employed or work in factories working with power and employing more than ten persons.

3. Children under the age of thirteen years shall not be employed or work in the transport of passengers or goods, or mails, by rail, or in the handling of goods at docks, quays or wharves, but excluding transport by hand.

4. Children under the age of fifteen years shall not be employed or work—

(*a*) in mines, quarries, and other works for the extraction of minerals from the earth;

(*b*) in occupations to which this Article applies which are scheduled as dangerous or unhealthy by the competent authority.

5. Unless they have been medically certified as fit for such work—

(*a*) persons who have attained the age of twelve years but are under the age of seventeen years shall not be permitted to work in factories working with power and employing more than ten persons;

(*b*) persons who have attained the age of fifteen years but are under the age of seventeen years shall not be permitted to work in mines.

Article 8

1. The provisions of this Article shall be applicable in China in substitution for the provisions of Articles 2, 4 and 5.

2. Children under the age of twelve years shall not be employed or work in any factory using machines driven by motor power and regularly employing thirty persons or more.

3. Children under the age of fifteen years shall not be employed or work—

(*a*) in mines regularly employing fifty persons or more; or

(*b*) on dangerous or unhealthy work as defined by national laws or regulations in any factory using machines driven by motor power and regularly employing thirty persons or more.

4. Every employer in an undertaking to which this Article applies shall keep a register of all persons under the age of sixteen employed by him, together with such evidence of their age as may be required by the competent authority.

Article 9

1. The International Labour Conference may, at any Session at which the matter is included in its Agenda, adopt by a two-thirds majority draft amendments to any one or more of the preceding Articles of Part II at this Convention.

2. Any such draft amendment shall state the Member or Members to which it applies, and shall, within the period of one year, or, in exceptional circumstances, of eighteen months, from the closing of the Session of the Conference, be submitted by the Member or Members to which it applies to the authority or authorities within whose competence the matter lies, for the enactment of legislation or other action.

3. Each such Member will, if it obtains the consent of the authority or authorities within whose competence the matter lies, communicate the formal ratification of the amendment to the Secretary-General of the League of Nations for registration,

4. Any such draft amendment shall take effect as an amendment to this Convention on ratification by the Member or Members to which it applies.

(The provisions of Articles 10 to 16 respecting ratification of this Convention are identical with those detailed above in the Draft Convention concerning Safety Provisions in the Building Industry—Articles 19 to 25.)

RECOMMENDATION CONCERNING THE MINIMUM AGE FOR ADMISSION OF CHILDREN TO INDUSTRIAL EMPLOYMENT IN FAMILY UNDERTAKINGS

The General Conference of International Labour Organization

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-third Session on 3 June 1937, and

Having decided upon the adoption of certain proposals with regard to the partial revision of the Convention fixing the minimum age for admission of children to industrial employment which is the sixth item on the Agenda of the Session, and

Having adopted a Draft Convention revising the said Convention and having decided to supplement the revised Convention by a Recommendation,

adopts, this 22nd day of June of the year one thousand nine hundred and thirty-seven, the following Recommendation which may be cited as the Minimum Age (Family Undertakings) Recommendation, 1937:

Whereas the Minimum Age (Industry) Convention (Revised) 1937, while restricting the scope of the exception for family undertakings contained in the 1919 Convention still permits such undertakings to be excluded from its scope except in the case of employments which, by their nature or the circumstances in which they are carried on, are dangerous to the life, health or morals of the persons employed therein; and

Whereas it is reasonable to hope that it will be possible to suppress this exception completely in the not distant future;

The Conference recommends that the Members of the Organisation should make every effort to apply their legislation relating to the minimum age of admission to all industrial undertakings, including family undertakings.

DRAFT CONVENTION CONCERNING THE AGE FOR ADMISSION OF CHILDREN TO NON-INDUSTRIAL EMPLOYMENT (REVISED 1937)

The General Conference of the International Labour Organisation,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Twenty-Third Session on 3 June 1937, and

Having decided upon the adoption of certain proposals with regard to the partial revision of the Convention concerning the age of admission of children to non-industrial employment adopted by the Conference at its Sixteenth Session, which is the seventh item on the Agenda of the Session, and

Considering that the proposals must take the form of a Draft International Convention,

adopts, this 22nd day of June of the year one thousand nine hundred and thirty-seven, the following Draft Convention which may be cited as the Minimum Age (Non-industrial) Employment Convention (Revised), 1937:

Article 1

1. This Convention applies to any employment not dealt with in the Convention concerning the age for admission of children to employment in agriculture (Geneva, 1921), the Minimum Age (Sea) Convention (Revised), 1936, or the Minimum Age (Industry) Convention (Revised), 1937.

2. The competent authority in each country shall, after consultation with the principal organisations of employers and workers concerned, define the line of division which separates the employments covered by this Convention from those dealt with in the three aforesaid Conventions.

3. This Convention does not apply to:

(*a*) employment in sea-fishing;

(*b*) work done in technical and professional schools, provided that such work is essentially of an educative character, is not intended for commercial profit, and is restricted, approved and supervised by public authority.

4. It shall be open to the competent authority in each country to exempt from the application of this Convention:

(*a*) employment in establishments in which only members of the employer's family are employed, except employment which is harmful, prejudicial or dangerous within the meaning of Article 3 or 5 of this Convention;

(*b*) domestic work in the family performed by members of that family.

Article 2

Children under fifteen years of age, or children over fifteen years who are still required by national laws or regulations to attend primary school, shall not be employed in any employment to which this Convention applies except as hereinafter otherwise provided.

Article 3

1. Children over thirteen years of age may, outside the hours fixed for school attendance, be employed on light work which:

(*a*) is not harmful to their health or normal development; and

(*b*) is not such as to prejudice their attendance at school or capacity to benefit from the instruction there given.

2. No child under fourteen years of age shall:

(*a*) be employed on light work for more than two hours per day whether that day be a school day or a holiday; or

(*b*) spend at school and on light work a total number of hours exceeding seven per day.

3. National laws or regulations shall prescribe the number of hours per day during which children over fourteen years of age may be employed on light work.

4. Light work shall be prohibited:

(*a*) on Sundays and legal public holidays; and

(*b*) during the night.

5. For the purpose of the preceding paragraph the term "night" means:

(*a*) in the case of children under fourteen years of age, a period of at least twelve consecutive hours comprising the interval between eight p.m. and eight a.m.;

(*b*) in the case of children over fourteen years of age, a period which shall be prescribed by national laws or regulations but the duration of which shall not, except in the case of tropical countries where a compensatory rest is accorded during the day, be less than twelve hours.

6. After the principal organisations of employers and workers concerned have been consulted, national laws or regulations shall:

(*a*) Specify what forms of employment may be considered to be light work for the purpose of this Article; and

(*b*) prescribe the preliminary conditions to be complied with as safeguards before children may be employed on light work.

7. Subject to the provisions of sub-paragraph (*a*) of paragraph 1 above:

(*a*) national laws or regulations may determine work to be allowed and the number of hours per day to be worked during the holiday time of children referred to in Article 2 who are over fourteen years of age.

(*b*) in countries where no provision exists relating to compulsory school attendance, the time spent on light work shall not exceed four and a half hours per day.

Article 4

1. In the interests of art, science or education, national laws or regulations may, by permits granted in individual cases, allow exceptions to the provisions of Articles 2 and 3 of this Convention in order to enable children to appear in any public entertainment or as actors or supernumeraries in the making of cinematographic films.

2. Provided that—

(*a*) no such exception shall be allowed in respect of employment which is dangerous within the meaning of Article 5, such as employment in circuses, variety shows or cabarets;

(*b*) strict safeguards shall be prescribed for the health, physical development and morals of the children, for ensuring kind treatment of them, adequate rest, and the continuation of their education; and

(*c*) children to whom permits are granted in accordance with this Article shall not be employed after midnight.

Article 5

A higher age or ages than those referred to in Article 2 of this Convention shall be fixed by national laws or regulations for admission of young persons and adolescents to any employment which, by its nature, or the circumstances in which it is to be carried on, is dangerous to the life, health or morals of the persons employed in it.

Article 6

A higher age or ages than those referred to in Article 2 of this Convention shall be fixed by national laws or regulations for admission of young persons and adolescents to employment for purposes of itinerant trading in the streets or in places to which the public have access, to regular employment at stalls outside shops or to employment in itinerant occupations, in cases where the conditions of such employment require that a higher age should be fixed.

Article 7

In order to ensure the due enforcement of the provisions of this Convention, national laws or regulations shall—

(*a*) provide for an adequate system of public inspection and supervision;

(*b*) require every employer to keep a register of the names and dates of birth of all persons under the age of eighteen years employed by him in any employment to which this Convention applies other than an employment to which Article 6 applies;

(*c*) provide suitable means for facilitating the identification and supervision of persons under a specified age engaged in the employments and occupations covered by Article 6; and

(*d*) provide penalties for breaches of the laws or regulations by which effect is given to the provisions of this Convention.

41473—5½

Article 8

There shall be included in the annual reports to be submitted under Article 22 of the Constitution of the International Labour Organisation full information concerning all laws and regulations by which effect is given to the provisions of this Convention, including—

(*a*) a list of the forms of employment which national laws or regulations specify to be light work for the purpose of Article 3;

(*b*) a list of the forms of employment for which, in accordance with Articles 5 and 6, national laws or regulations have fixed ages for admission higher than those laid down in Article 2; and

(*c*) full information concerning the circumstances in which exceptions to the provisions of Articles 2 and 3 are permitted in accordance with the provisions of Article 4.

Article 9

1. The provisions of Articles 2, 3, 4, 5, 6 and 7 of this Convention shall not apply to India, but in India the following provisions shall apply to all territories in respect of which the Indian Legislature has jurisdiction to apply them.

2. Children under thirteen years of age shall not be employed—

(*a*) in shops, offices, hotels or restaurants;

(*b*) in places of public entertainment; or

(*c*) in any other non-industrial occupations to which the provisions of this paragraph may be extended by the competent authority.

3. In the interest of art, science or education, national laws or regulations may, by permits granted in individual cases, allow exceptions to the provisions of the preceding paragraph in order to enable children to appear in any public entertainment or as actors or supernumeraries in the making of cinematographic films.

4. Persons under seventeen years of age shall not be employed in any non-industrial employment which the competent authority, after consultation with the principal organisations of employers and workers concerned, may declare to involve danger to life, health or morals.

5. The International Labour Conference may, at any Session at which the matter is included in its Agenda, adopt by a two-thirds majority draft amendments to the preceding paragraphs of this Article.

6. Any such draft amendment shall, within the period of one year, or, in exceptional circumstances, of eighteen months, from the closing of the Session of the Conference, be submitted in India to the authority or authorities within whose competence the matter lies, for the enactment of legislation or other action.

7. India will, if it obtains the consent of the authority or authorities within whose competence the matter lies, communicate the formal ratification of the amendment to the Secretary-General of the League of Nations for registration.

8. Any such draft amendment shall take effect as an amendment to this Convention on ratification by India.

(The provisions of Articles 10 to 16 respecting ratification of this Convention are identical with those detailed above in the Draft Convention concerning Safety Provisions in the Building Industry—Articles 19 to 25.)

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MAY, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on June 1 was 10,178, the employees on their payrolls numbering 1,087,735. persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May was 1,820, having an aggregate membership of 194,921 persons, 9·5 per cent of whom were without employment on June 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of June, 1937, as reported by the Employers

According to data tabulated by the Dominion Bureau of Statistics from 10,178 firms and branches throughout Canada, there was a considerable expansion in industrial employment at the beginning of June, the gain exceeding that recorded at June 1 in any other year for which information is available. The payrolls of the co-operating employers rose from 1,011,800 at May 1 to 1,087,735 at the date under review, an increase of 75,935 persons, or 7·5 p.c. in the month.

From 106·3 at May 1, the crude index advanced to 114·3 at the beginning of June, when it was higher than in any other month since October, 1930; the June 1 indexes in preceding years of the record have been as follows: 1936, 102·0; 1935, 97·6; 1934, 96·6; 1933, 80·7; 1932, 89·1; 1931, 103·6; 1930, 116·5; 1929, 122·2; 1928, 113·8; 1927, 107·2; 1926, 102·2; 1925, 95·6; 1924, 96·4; 1923, 98·5; 1922, 90·3 and 1921, 87·7. The 1926 average is taken as 100 in calculating these index numbers.

It is interesting to note that the index of employment at the latest date is higher than at June 1 in any earlier year of the record except 1929 and 1930. However, in making this comparison, the normal growth in the population should also be considered; even with the unusually large increase in staffs recorded at June 1, the employment curve is still rather lower than the crude population curve plotted from indexes calculated also on the 1926 base. On the other hand, in the years from 1926 to 1930, the employment curve was higher than that of population. These discrepancies were briefly discussed in the 1936 Annual Review of Employment.

The increase in employment at June 1, 1937, as already stated, exceeded the average gain indicated at the beginning of June in the experience of the last sixteen years; after adjustment for seasonal variation, the index therefore advanced from 109·4 at May 1, 1937, to 112·6 at the latest date. It was then higher than in any other month since August, 1930.

Marked improvement was reported in manufacturing, especially in the food, lumber, pulp and paper, iron and steel and clay, glass and stone divisions. In the non-manufacturing industries, there were important increases in logging, mining, communications, transportation, building, highway and railway construction and maintenance, services and trade. The expansion in construction was particularly noteworthy, greatly exceeding that indicated at June 1 in other years of the record.

For June 1, 1936, statements had been received from 9,690 employers of 963,513 persons, compared with 940,218 in the preceding month. The index, at 102·0, was then over twelve points lower than at June 1 of the present year. As at the date under review, improvement had been indicated in both manufacturing and non-manufacturing industries.

Employment by Economic Areas

The trend was decidedly upward in each of the five economic areas; firms in Quebec and

Ontario employed the greatest number of extra workers, while the percentage gains over the preceding month ranged from 6·5 in the Prairies to 10·1 in the Maritimes. The general situation was better than at June 1 in 1936, or in any of the last few years.

Maritime Provinces.—A substantial increase in employment was reported in the Maritime Provinces, according to statistics received from 718 employers with a combined working force of 88,034 persons, as compared with 79,941 at May 1. Manufacturing registered considerably heightened activity, particularly in the lumber and animal food divisions; trade, logging and construction also afforded greater employment, the gains in the last-named being especially pronounced. On the other hand, transportation was seasonally slacker. The 689 firms reporting for June 1, 1936, had employed 74,124 workers, or practically the same number as at the beginning of May last year; the index then was 18·6 points lower than at the latest date, when it stood at 122·0.

Quebec.—Improvement was indicated in almost all industrial groups in Quebec; construction and manufacturing recorded especially large increases in personnel, while there were also important gains in logging, mining, transportation, services and trade. Within the manufacturing division, pulp and paper, lumber and iron and steel plants showed the greatest expansion; the only decrease, on the whole, occurred in textiles, which were seasonally dull. Statements were tabulated from 2,425 firms employing 316,144 workers at June 1, 1937, or 23,322 more than in their last monthly report. The general gain indicated by the employers making returns exceeded the average at June 1 in the years, 1921-1936; it was also much larger than the increase recorded at the same date of last year, when the co-operating establishments, numbering 2,280, had reported 276,235 employees, as compared with 266,694 in the preceding month.

Ontario.—There were considerable increases in manufacturing, logging, mining, communications, transportation, construction and trade at June 1, 1937, those in construction and manufacturing being most pronounced. Within the latter, the lumber, food and iron and steel divisions showed large increases in personnel, and there were smaller gains in the pulp and paper, rubber, clay, glass and stone, electrical apparatus, electric current, non-ferrous metal and other groups; on the other hand, leather, textile and tobacco works were slacker. The payrolls of the 4,499 co-operating establish-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

ments aggregated 462,112 employees at the latest date; as compared with 432,766 at May 1, this was an increase of 29,346 persons. The general index of employment stood at 118·8 at June 1, as compared with 111·2 at May 1, 1937, and 104·7 at the beginning of June in 1936, when a moderate increase had been indicated. An aggregate working force of 402,874 persons was reported by the 4,260 concerns then furnishing data.

Prairie Provinces.—Construction (especially railroad construction and maintenance), transportation, manufacturing, mining, services and trade showed improvement in the Prairie Provinces; the food, lumber and iron and steel industries recorded the greatest advances in the factory employment group. On the other hand, logging was seasonally slacker. The 1,459 firms whose statistics were tabulated employed 126,395 persons, as against 118,716 in the preceding month. Smaller increases had been indicated at June 1, 1936, and the index then was slightly lower. The 1,420 employers making returns at June 1, 1936, had reported 123,347 workers, compared with 117,081 at May 1.

British Columbia.—An aggregate payroll of 95,050 was reported by the 1,077 co-operating establishments, who had 87,555 employees at the beginning of May. This increase exceeded the average gain at June 1 in the years since 1920, and was also much greater than that noted at the same date in 1936. The index of employment then was ten points lower than at the first of June of the present year, when it stood at 112·2. Manufacturing recorded noteworthy expansion at the date under review, the improvement in non-ferrous metal, lumber and food factories being most pronounced. Among the non-manufacturing groups, logging, mining, transportation, construction and maintenance and services showed heightened activity; the gains in railway and highway construction were largest. For June 1, 1936, statements were received from 1,041 employers of 86,833 persons.

Table 1 gives index number by economic areas.

Employment by Cities

The trend was upward in each of the eight cities for which separate compilations are made; Montreal, Quebec City, Toronto,

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Relative Weight of Employment by Economic Areas as at June 1, 1937	100·0	8·1	29·1	42·5	11·6	8·7

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Ottawa, Hamilton, Winnipeg and Vancouver showed considerable improvement, while there was a slight gain in Windsor. Employment in these centres was in greater volume than at the same date in 1936, or in any of the last few years.

Montreal.—Further marked improvement was recorded in Montreal, where the 1,402 co-operating firms employed 158,020 persons, an increase of 6,249 over their May 1 staffs. Manufacturing reported an increase, especially in the iron and steel, food and non-metallic mineral product divisions. Transportation construction and trade were also busier. The index, at 105·2, was higher than in any other month since the summer of 1931, being 11½ points higher than in June, 1936; a smaller gain had then been recorded in the 1,328 establishments whose data were tabulated, whose employees had numbered 140,577.

Quebec.—Firms in Quebec City afforded more employment, chiefly in manufacturing, construction and trade. Statements were tabulated from 178 employers having 13,564 workers, as against 13,039 in the preceding month. Improvement had also been indicated at the beginning of June of a year ago, when the index was nearly five points lower; an aggregate of 169 firms had then reported a staff of 12,865.

Toronto.—Returns were furnished by 1,532 establishments in Toronto with 135,176 employees, compared with 133,467 at May 1. Manufacturing as a whole was brisker, there being moderate gains in practically all its divisions except textiles, which showed seasonal slackness. Transportation, construction and trade also afforded more employment, while there was a slight falling-off in services. The general index was higher than at June 1, 1936, when statistics from 1,459 firms showed an aggregate payroll of 124,173 persons, or 1,119 more than at the beginning of May of last year.

Ottawa.—Manufacturing reported heightened activity, especially in the lumber division, and construction and trade also showed improvement. A combined working force of 14,838 employees was recorded at June 1, 1937, by the 201 co-operating firms, who had had 14,140 on their staffs in the preceding month. At June 1, 1936, 184 establishments had employed 14,137 men and women, a small gain over their May 1 staffs, while the index was then 3·6

Relative Weight of Employment by Cities as at June 1, 1937	14·5	1·2	12·4	1·4	3·4	1·9	3·8	3·3

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

points lower than that of 111·8 at the date under review.

Hamilton.—An increase was noted in Hamilton, where 289 employers reported 36,820 workers on their paylists, or 758 more than at the beginning of May. This advance compared favourably with the decline indicated at June 1, 1936, when employment was at a lower level. Improvement was noted in construction, trade and manufacturing, the gain in the last-named occurring mainly in the iron and steel, electrical apparatus and food divisions. The 275 concerns furnishing data for June 1, 1936, had employed 31,345 persons, or 171 fewer than in the preceding month; the index then stood at 97·6, compared with 114·2 at June 1, 1937.

Windsor.—Employment in Windsor showed little general change at June 1, for which data were received from 178 firms with 20,907 employees, a gain of 32 since the beginning of May. There was a falling-off in the iron and steel industry, but building and trade reported moderate improvement. A seasonal reduction had been registered at June 1, 1936, by the 170 co-operating establishments, whose payrolls aggregated 16,742, compared with 18,505 at May 1. Employment then was not so active as at the latest date, when the index stood at 153·1.

Winnipeg.—An aggregate working force of 41,364 persons was indicated by the 480 employers whose statistics were received, and who had 40,066 employees at May 1. Most of the gain recorded was in manufacturing, particularly of iron and steel products, and in communications, trade and construction; the changes in the remaining industrial groups, on the whole, were moderate. The general increase was smaller than that noted at the beginning of June of last year, when 475 returns had been tabulated, showing a combined working force of 39,071 men and women, as against 37,543 in the preceding month. The index then stood at 90·9, compared with 96·5 at June 1, 1937.

Vancouver.—Manufacturing, especially of food, lumber, non-ferrous metal and pulp and paper products, transportation and construction reported gains in Vancouver; statements were

Relative Weight of Employment by Industries as at June 1, 1937	100·0	55·1	2·9	6·4	2·1	9·5	11·5	2·6	9·9

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

tabulated from 446 employers with 35,744 workers in their employ, as compared with 34,065 at May 1, 1937. An increase on a smaller scale had taken place at June 1 of a year ago, when 427 establishments had reported 33,291 persons on their paylists, or 656 more than in the preceding month. Employment then was in less volume, the index being seven points below that of 110·8 indicated at the beginning of June 1 of this year.

Index numbers for cities are given in Table 2.

Employment by Manufacturing Industries

There was an upward movement in manufacturing, continuing the advances indicated uninterruptedly since the opening of the year. Statements were tabulated from 5,943 manufacturers employing 598,971 operatives, as compared with 577,663 in the preceding month; this gain of 21,308 employees or 3·7 per cent was much larger than the average increase recorded from May 1 to June 1 in the years since 1921. The crude index rose from 113·8 at May 1 to 117·9 at the latest date, when it was higher than in any other month since October 1, 1929, being 14·5 points above that for June 1, 1936. Since the increase from May to June 1 of the present year exceeded the average, the seasonally-corrected index showed an advance, rising from 113·2 in the preceding month, to 114·7 at the latest date.

The unadjusted indexes at June 1 in the years for which statistics are available are as follows: 1937, 117·9; 1936, 103·4; 1935, 98·4; 1934, 93·2; 1933, 80·0; 1932, 86·0; 1931, 99·4; 1930, 113·6; 1929, 121·2; 1928, 112·6; 1927, 106·9; 1926, 101·6; 1925, 95·6; 1924, 95·7; 1923, 101·2; 1922, 91·1; and 1921, 87·8.

Gains were registered at June 1, 1937, in the lumber, pulp and paper, animal and vegetable food, iron and steel, non-ferrous metal, clay, glass and stone, electrical apparatus, electric current, rubber and mineral product industries. On the other hand, textile and to-

[1] The "Relative Weight" column shows the porportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

bacco works were rather slacker, the losses in the former being seasonal in character.

A brief review of the situation at June 1, 1936, shows that the 5,736 co-operating manufacturers had then employed 522,055 persons, as compared with 518,679 in the preceding month. The food, lumber, pulp and paper and other industries had shown improvement over May 1, 1936.

Animal Products, Edible.—There were further and more pronounced increases in the numbers employed in this group, particularly in the fish-preserving division in the Maritime Provinces and British Columbia. Statistics were tabulated from 317 firms employing 26,609 persons, as compared with 24,294 in the preceding month. This advance was similar in size to that reported at June 1, 1936, when the index was over ten points lower.

Fur and Fur Products.—There was an upward trend in employment in fur factories, 62 of which enlarged their payrolls from 2,072 persons at the beginning of May to 2,164 at June 1. A rather larger gain had been indicated at the same date last summer, but activity was then at a lower level.

Leather and Products.—Employment in this group showed a slight improvement in the latest month, comparing favourably with the falling-off indicated in the same month last year; the index then stood at 109·5, compared with 117·9 at the date under review. The working forces of the 301 co-operating employers totalled 24,229 persons, as against 24,181 in the preceding month. There were losses in leather factories in Ontario, while those in Quebec were somewhat busier.

Lumber and Products.—Continued, seasonal improvement took place in lumber mills, and there were also gains in container, furniture and other wood-using plants. Returns were compiled from 878 manufacturers in the lumber group having 50,823 workers on their staffs, compared with 44,589 at the beginning of May. All provinces shared in the upward movement at June 1, that in Quebec and Ontario being especially pronounced. Additions to staffs on a much smaller scale were made at the same date last year, and the index then was many points lower.

Plant Products, Edible.—Expansion was noted in this group at the beginning of June, when 2,539 persons were added to the forces of the 474 co-operating manufacturers, who had 32,682 employees. Fruit and vegetable canning, flour and cereal, bakery and other vegetable food establishments reported improvement. The increase registered at June 1, 1936, was not so extensive; the employment index was then several points lower than at the date under review.

Pulp and Paper Products.—Pulp and paper mills showed a substantial increase in personnel, and printing and publishing houses were rather busier; the index number in the pulp and paper group as a whole stood at 111·7, compared with 100·6 at the beginning of June of last year, when the gains recorded were decidedly smaller. An aggregate payroll of 68,093 workers was reported by the 612 establishments whose statistics were compiled; and which had employed 65,497 in the preceding month.

Rubber Products.—Fifty-four rubber factories recorded a combined working force of 13,881 persons, or 554 more than in their last return. Employment was in greater volume than at the beginning of June a year ago, when little general change over the preceding month had been indicated.

Textile Products.—There was a slight seasonal decline in employment in the textile industries at the date under review, chiefly in wool, silk, knitting and garment factories. On the other hand, cotton mills were busier. There were losses on the whole in this division in Quebec and Ontario. Data were received from 1,089 firms employing 110,906 persons, as against 111,086 in the preceding month. A much larger decrease had been reported at June 1, 1936; the index was then over twelve points lower than at the date under review.

Tobacco, Distilled and Malt Liquors.—Activity in this group showed a decline, according to 186 employers whose staffs were lowered from 16,780 in the preceding month, to 16,641 at the beginning of June in the present year. Tobacco manufacturing reported most of the falling-off. A considerable reduction in personnel had been indicated at June 1 of last year, when the index was over eleven points lower.

Clay, Glass and Stone Products.—Further marked improvement was noted in building material plants, 206 of which employed an aggregate working force of 11,036 persons, or 1,109 more than at May 1. The index stood at 99·6; this was 13·6 points higher than that recorded at June 1, 1936, when a much smaller increase had been made. Quebec and Ontario reported the bulk of the gain, in which factories producing these kinds of building materials shared.

Electric Current.—An advance as compared with May was shown in electric current plants, in which employment was in greater volume than at the same date a year ago. The 96 co-operating companies increased their staffs by 655 workers to 15,085 at the beginning of June, 1937.

Electrical Apparatus.—Heightened activity was shown in electrical appliance factories, 125 of which enlarged their payrolls by 693 employees to 19,763 at the date under review. A similar gain had been recorded at June 1, 1936, when employment was at a much lower level.

Iron and Steel Products.—There was a contra-seasonal increase at June 1, 1937, in the iron and steel group; most divisions shared in the upward movement, the largest gains being in the crude, rolled and forged, land vehicle and iron and steel fabrication branches. Returns were tabulated from 872 manufacturers employing 145,345 persons, compared with 142,652 at May 1. Improvement was noted in all five economic areas, that in Quebec and Ontario being greatest. A seasonal decline had occurred at June 1, 1936, and the index was then many points lower.

Non-ferrous Metal Products.—These industries reported heightened activity, according to 173 firms employing 25,044 persons, compared with 24,217 in the preceding month. The increase took place mainly in Ontario and British Columbia. Rather less extensive improvement had been recorded at the beginning of June a year ago, and employment was then in smaller volume.

Mineral Products.—Continued seasonal advances were noted generally in this group; these were larger than those occurring at June 1, 1936, when the index number was decidedly lower. An aggregate payroll of 15,388 persons was reported for June 1, 1937, by the 144 co-operating employers, who had 14,707 workers at May 1.

Miscellaneous Manufacturing Industries.—Production in the manufacturing establishments listed under this heading showed an increase, 226 workers having been added to the forces of the 109 firms whose returns were tabulated, and who employed 6,190 at the beginning of June.

Logging

Employment in logging camps increased, largely as a result of river driving operations. Returns were received from 340 firms employing 31,225 persons, or 6,413 more than at May 1. A much smaller advance had been indicated at June 1, 1936, and the index, at 94·1, was then decidedly lower than at the beginning of June in the present year, when it stood at 109·1.

Mining

Coal-Mining.—Employment in both eastern and western coal-fields showed moderate curtailment. Statements were compiled from a total of 104 operators with 22,557 employees, or 217 fewer than at the beginning of May. The index was fractionally lower than at June 1, 1936, when the recorded decrease had been smaller.

Metallic Ores.—A further gain was shown in metallic ore mines, mainly in Ontario and British Columbia; 219 employers enlarged their staffs from 36,237 workers at May 1, to 37,698 at the date under review. A smaller increase had taken place at the beginning of June of last year, and the index then was many points lower than at June 1, 1937.

Non-Metallic Minerals (other than coal).—According to data received from 88 firms in this group, they employed 9,878 persons, or 840 more than in the preceding month. Employment was brisker than at the same date of last year, although larger additions to staffs had then been reported by the co-operating firms.

Transportation

Street Railways and Cartage.—A moderate increase was registered in local transportation at June 1, when 238 companies added 169 employees to their payrolls, bringing them to 26,480. Expansion in employment had also been noted at the beginning of June, 1936, but the index was then slightly lower than at the date under review.

Steam Railways.—Improvement was indicated in steam railway operation, in which the 99 co-operating employers enlarged their personnel from 59,594 in the preceding month to 60,707 at June 1. The Maritime Provinces reported seasonal reductions, while there were increases in the remaining economic areas. Employment generally was at a rather higher level than at June 1 of last year, although more extensive gains had then been recorded.

Shipping and Stevedoring.—There were pronounced seasonal losses in employment in the Maritime Provinces, partly offsetting the increases elsewhere indicated. Statistics were received from 111 firms with 16,884 employees, as compared with 16,261 in the preceding month. A larger gain on the whole had been noted at June 1, 1936; the index then stood at 95·8, compared with 93·1 at the date under review.

Communications

Improvement was indicated on telegraphs and telephones. The 83 companies and branches reporting had 22,873 persons on their paylists at the beginning of June, or 730 more than at May 1. Employment was at a higher level than at the same date a year ago, when a smaller gain had been indicated.

Construction and Maintenance

Building.—An aggregate staff of 24,018 was reported by the 734 contractors furnishing statistics, who had 18,465 workers at May 1. Activity increased in each of the five economic areas, the largest advances being in Quebec and Ontario. The improvement, which was seasonal, compared favourably with the decline indicated at June 1, 1936; building generally was then not so active as at the date under review.

Highway.—The 360 highway and road contractors furnishing returns had 68,264 persons in their employ, or 28,008 more than at the beginning of May. All provinces shared in the upward movement, Ontario reporting the greatest gain. The number engaged in road work was larger than at the beginning of June, 1936, when a general increase had also been indicated.

Railway.—Important advances were again registered by the track departments of the railways; the working forces of the 37 co-operating employers totalled 32,699 persons, as against 26,098 in the preceding month. This increase was not so large as noted at June 1, 1936, and employment was in slightly greater volume. The most noteworthy gains at the date under review were in the Prairie Provinces, but all five economic areas reported improvement.

Services

Hotels and restaurants showed a seasonal increase, and laundries and dry-cleaning establishments also recorded improved conditions. Statements were compiled from 473 firms employing 28,097 workers, as compared with 27,249, at May 1. The index, at 129·0, was six points higher than at the same date in 1936, when smaller advances had been made.

Trade

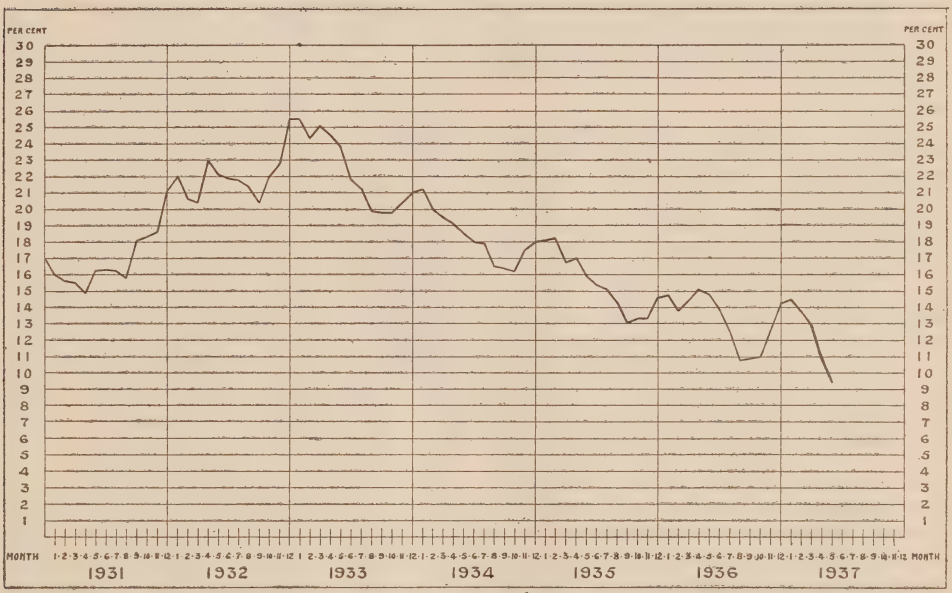
Marked improvement was indicated in retail and wholesale trade; 1,349 establishments employed 107,384 persons, or 2,485 more than in their last return. A greater increase had been noted at June 1, 1936, but the index was then over four points lower. Most of the advance at the date under review took place in retail establishments.

Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated areas or industry is of the total number of employees reported in Canada at the date under review.

(2) Unemployment in Trade Unions at the Close of May, 1937

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades, or who are idle due to illness, are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.



A continuation of the upward trend of activity among local trade union members, which has been in evidence since the close of January this year, was again apparent during May according to the reports compiled from 1,820 labour organizations with a membership aggregate of 194,921 persons. Of these, 18,583 or 9·5 per cent were reported as out of work on the last day of the month as compared with a percentage of 11·1 in April. This unemployment percentage reported for May denotes the most favourable situation that has been established in any month of our records since September, 1930. In May a year ago 14·8 per cent of idleness was registered. All provinces with the exception of Nova Scotia showed a general betterment of conditions from April, though the variations were slight, Ontario and Saskatchewan indicating improvement of around 2 per cent and the other provinces advances of lesser degree. In Nova Scotia employment was but nominally retarded from April. Contrasted with the returns for May, 1936, Ontario unions particularly showed marked recovery during the month reviewed, especially in the building and construction trades, though practically all trades and industries contributed their quota to the total expansion noted. In Quebec and British Columbia also an encouraging measure of improvement was reflected, New Brunswick and Manitoba showing gains of more moderate degree. In Nova Scotia, Saskatchewan and Alberta, however, minor contractions in activity occurred.

A separate tabulation is made each month of unemployment among local trade union members in the largest city in each province with the exception of Prince Edward Island. During May all the cities used for comparison recorded gains in activity over April, none of which, however, was particularly outstand-

ing, Saint John, Halifax, Toronto and Winnipeg indicating moderately improved conditions, while in Montreal, Regina, Edmonton and Vancouver the advancement shown was but fractional. Decided employment revival, however, was apparent among Saint John and Toronto unions from May a year ago, and in Vancouver, Montreal and Winnipeg the increases registered, while of much lesser degree, still were rather noteworthy. In Regina the tendency was also toward greater employment though the change from May last year was less than one per cent. Edmonton and Halifax unions, on the contrary, suffered some curtailment of activity.

8·2 per cent of whom were idle at the end of the month, as compared with a percentage of 10·6 in April. A considerably improved situation was shown from May of last year when 15·5 per cent of unemployment was recorded. Brewery and glass workers, whose combined membership was rather small, were substantially better employed than in April, and fur and jewellery workers showed rather noteworthy advancement. Minor gains were apparent among iron and steel, and garment workers, general labourers, cigar and tobacco workers, and printing tradesmen. Conditions for bakers and confectioners, pulp and paper makers, wood, and textile and carpet workers,

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Accompanying this article is a chart which shows the trend of unemployment from January, 1931, to date. It will be noticed that the curve of unemployment has been steadily extending in a downward direction denoting an increasing volume of available work since January of this year. The level reached at the close of May was the lowest that has been shown in any month of this chart and on looking over our records we find it to be the best level of employment attained since September, 1930. The variation from May of last year was quite noticeable, indicative of a considerable measure of recovery during the month reviewed.

Reports were forwarded at the close of May from 516 organizations in the manufacturing industries, including 66,859 members, 5,494 or

however, were but fractionally better than in April. Activity for meat cutters and butchers, hat, cap and glove, and leather workers, on the contrary, subsided slightly. Metal polishers maintained the same percentage of idleness as in April. Marked employment expansion from May a year ago was evident among hat, cap and glove, garment, wood and leather workers, and the situation was considerably improved for iron and steel, jewellery, cigar and tobacco, and textile and carpet workers, bakers and confectioners, and metal polishers. An upward movement of employment was indicated also among brewery workers and printing tradesmen. Fur and glass workers, however, showed a large percentage drop in employment from May of last year which affected few members, and

among meat cutters and butchers, pulp and paper makers, and general labourers, activity was somewhat restricted.

Little variation was apparent in the situation for coal miners during May from the previous month, the 51 associations making returns, with a total of 18,305 members, showing that 2,876, or 15·7 per cent, were without work on the last day of the month contrasted with a percentage of 16·2 in April. Retarded employment on a small scale was evident from May, 1936, when 14·2 per cent of idleness was recorded. British Columbia miners were much better engaged during May than in either the preceding month or May of last year, while in Alberta moderate gains in activity were reflected from April, but some falling off in available work was noted from May a year ago. Nova Scotia unions, however, registered curtailment of employment on a small scale in both comparisons. Short time work, however, was prevalent throughout the month reviewed.

A greater volume of employment was afforded in the building and construction trades during May than in either the previous month or May, 1936, as manifest by reports received from 196 associations covering a membership of 19,937 persons. Of these, 5,255 or 26·4 per cent were unemployed on the last day of the month contrasted with percentages of 30·8 in April and 40·5 in May, 1936. Steam shovelmen, bridge and structural iron workers, and granite and stone cutters were much better employed than in April, and the situation for carpenters and joiners, bricklayers, masons and plasterers, and plumbers and steamfitters was considerably more favourable. Tile layers, lathers and roofers showed more moderate advancement. Painters, decorators and paperhangers, however, suffered severe losses in work available, and among hod carriers and building labourers noteworthy contractions were evident, electrical workers indicating but slight employment cessation from April. In contrast with the returns for May, 1936, in the building and construction trades decided employment expansion was reflected during the month reviewed by steam shovelmen, bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, plumbers and steamfitters, and tile layers, lathers and roofers. Heightened activity, on a smaller scale, was registered by hod carriers and building labourers, electrical workers and granite and stone cutters. Painters, decorators and paperhangers alone, showed some lessening in the employment volume afforded.

The transportation industries with 811 organizations making returns at the close of May, with a membership numbering 62,667 persons, indicated that 3,560 or a percentage of 5·7 were out of work on the last day of the month as compared with a percentage of 6·6 in April. Steam railway employees, whose returns included nearly 78 per cent of the entire group membership reported, navigation workers, street and electric railway employees, and teamsters and chauffeurs, all contributed to this slight advance shown from April. The situation in the transportation industries, as a whole, also reflected some slight gain from May a year ago when 7·1 per cent of the members reported were idle. In this compari-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

son, steam railway employees were largely responsible for the better movement noted during the month reviewed, though slightly greater employment was also accorded teamsters and chauffeurs. Among street and electric railway employees, and navigation workers the tendency was adverse though the change was less than one per cent.

Adequate work was available to retail shop clerks during May as for several months past, but in May of last year 5·1 per cent of idleness was reported. This was apparent from the returns tabulated for May from 3 associations with a membership total of 1,025 persons.

A more favourable tendency was noted by civic employees during May than in the previous month according to the reports compiled from 75 associations with 8,547 members. Of these, only 55 or 0·6 per cent were without work at the end of the month as compared with a percentage of 1·6 in April. Heightened activity, on a small scale, was also indicated from May last year when 2·3 per cent of unemployment was recorded.

In the miscellaneous group of trades the level of employment during May remained almost identical with that of April as shown from the reports tabulated from 131 unions embracing a membership of 7,844 persons. Of these, 602 or 7·7 per cent were idle at the close of the month in contrast with a percentage of 7·6 in April. Conditions were, however, somewhat better than in May a year ago when 9·5 per cent of unemployment was registered. Hotel and restaurant employees, barbers, and stationary engineers and firemen all showed fractional gains in work afforded from April, which were just more than offset by the contractions evident among theatre and stage employees and unclassified workers. When contrasted with the returns for May of last year, hotel and restaurant employees were considerably better engaged during the month surveyed, and the situation for theatre and stage employees, barbers and stationary engineers and firemen improved slightly. Unclassified workers alone reported some slowing up in activity.

Fishermen were quite actively employed during May, the percentage of idleness standing at 0·3 as compared with percentages of 3·2 in April and 0·8 in May, 1936. Reporting for May were 3 associations of these workers with a combined membership of 650 persons.

Reports were tabulated for May from 2 unions of lumber workers and loggers, involving a total of 968 members, 1·5 per cent of whom were without employment on the last day of the month as compared with a percentage of 2·3 in April. In May a year ago 8·4 per cent of inactivity was recorded.

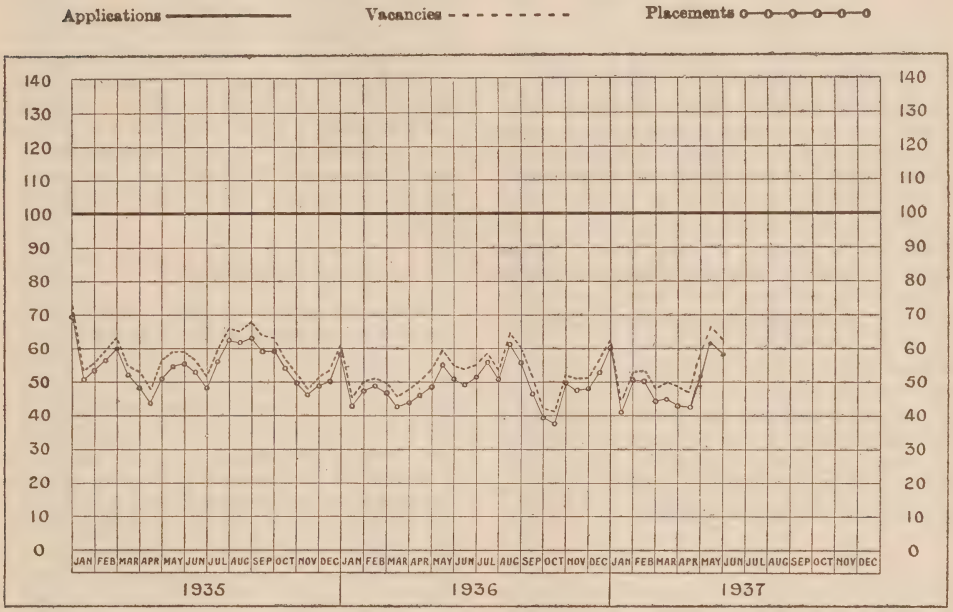
Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1936 inclusive, and also the percentage of unemployment by provinces for May of each year from 1919 to 1934 inclusive, and for each month from May, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for May, 1937

During the month of May, 1937, reports received from the offices of the Employment Service of Canada showed increases of over 33 per cent and 29 per cent, respectively, in the average daily placements when compared with those of the preceding month and also with those effected in May a year ago. All groups, except farming, manufacturing and transportation, registered gains over April, the highest being in construction and maintenance, logging and services and the greatest decline in farming, changes in the remaining groups, both plus and minus, being nominal only. When compared with May last year, noteworthy gains were recorded in logging and construction and maintenance, with others of smaller volume in manufacturing, services and transportation and minor additions in mining and trade. Farming was the only industry to show a loss, but this was quite pronounced.

The accompanying chart shows the trend of employment from January, 1935, to date, as reported by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications followed a pronounced upward trend during the first half of the period, but recorded a decline during the latter half of the month; at the end of May, however, both levels were over 7 points higher than those reached at the close of the corresponding period a year ago. The ratio of vacancies to each 100 applications was 66·5 and 62·5 during the first and the second half of May, 1937, respectively, in contrast with ratios of 59·6 and 54·9 during the corresponding periods of 1936. The ratios of placements to each 100 applications during the month under review were 61·4 and 58·1, as compared with 55·0 and 50·9 during May a year ago.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during May, 1937, was 1,501, as compared with a daily average



of 1,161 in the preceding month and with 1,163 in May, 1936.

The average number of applications for employment received daily by the offices during the month under review was 2,329, in comparison with 2,223 in April and with 2,027 in May last year.

vacancies, 50,652 applications for work and 26,864 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927, to date:—

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The average number of placements made daily by the offices of the Service during May, 1937, was 1,390, of which 955 were in regular employment and 435 in work of one week's duration or less, as compared with a total daily average of 1,042 in the previous month. Placements during May a year ago averaged 1,075 daily, consisting of 612 placements in regular and 463 in casual employment.

During the month of May, 1937, the offices of the Service referred 34,451 persons to vacancies and effected a total of 33,351 placements. Of these, the placements in regular employment were 22,927, of which 18,637 were of men and 4,290 of women, while placements in casual work numbered 10,424. The number of vacancies reported by employers was 24,425 for men and 11,591 for women, a total of 36,016, with applications for work numbering 55,881, of which 42,765 were from men and 13,116 from women. Reports for April, 1937, showed 30,168 positions available, 57,778 applications made and 27,089 placements effected, while in May, 1936, there were recorded 29,070

Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937 (5 months)	93,442	41,327	134,769

NOVA SCOTIA

Orders listed at employment offices in Nova Scotia during May, 1937, were nearly 77 per cent better than in April and over 119 per cent higher than during the corresponding period of last year. There were also gains of over 77 per cent in placements when compared with the preceding month and nearly 115 per cent when compared with May, 1936. Except for nominal losses in farming and trade, all

industrial divisions showed gains in placements in comparison with May a year ago, the highest being in construction and maintenance, services and logging. During the month there were 733 placements effected in construction and maintenance; 150 in logging; 68 in manufacturing; 40 in mining and 656 in services, of which 402 were of household workers. Regular placements numbered 855 of men and 81 of women.

NEW BRUNSWICK

Opportunities for employment, as indicated by orders received at employment offices in the Province of New Brunswick during May, were over 16 per cent better than in April and nearly 9 per cent more favourable than in May, 1936. Placements also were nearly 17 per cent above those of the preceding month and over 11 per cent in excess of the corresponding period of last year. Except for small losses in manufacturing and logging, increased placements over May, 1936, were reported in all remaining industrial divisions, the most noteworthy addition being in services and construction and maintenance, gains in other groups being nominal only. Placements by industries included logging 46; construction and maintenance 47 and services 786, of which 537 were of household workers. There were 112 men and 128 women placed in regular employment during the month.

QUEBEC

There was a decline of over 5 per cent in the number of positions offered through employment offices in the Province of Quebec during May when compared with the previous month, but a gain of nearly 23 per cent in comparison with the corresponding period of last year. Placements showed practically no change from April, 1937, but were almost 19 per cent above those reported in May, 1936. Improvement over May a year ago was nearly all attributable to increased placements under logging, manufacturing and construction and maintenance, although small gains were also shown in services, farming, transportation and trade. Placements by industrial divisions included:—manufacturing 317; logging 1,199; farming 96; construction and maintenance 1,356; trade 112 and services 2,630, of which 2,226 were of household workers. During the month 3,133 men and 1,459 women were placed in regular employment.

ONTARIO

Employment opportunities, as indicated by orders listed at employment offices in Ontario during May, were 43 per cent better than in April and over 27 per cent higher than during the corresponding month a year ago. There were gains of nearly 47 per cent in placements when compared with the preceding month and of almost 29 per cent in comparison with May, 1936. Pronounced increases in placements over May last year were recorded in logging and construction and maintenance, with a smaller gain shown in manufacturing. Minor increases also were noted in transportation and trade, but these were more than offset by nominal declines reported in mining, farming and services. Industrial divisions in which most of the placements were effected included:—manufacturing 905; logging 2,671; farming 1,316; mining 48; transportation 131; construction and maintenance 4,443; trade 331 and services 5,114, of which 2,777 were of household workers. There were 8,638 men and 1,402 women placed in regular employment during the month.

MANITOBA

During the month of May, 1937, positions offered through employment offices in Manitoba were nearly 3 per cent higher than in the preceding month, but almost 4 per cent less than in the corresponding month of last year. Placements also were 15 per cent higher than in April and nearly 4 per cent in excess of May, 1936. Placements in logging, services, manufacturing and transportation were greater than during May a year ago, but increases in these groups were partially offset by declines in construction and maintenance, farming, trade and mining. Placements by industrial groups included:—logging 251; farming 282; construction and maintenance 338 and services 846, of which 673 were of household workers. During the month 873 men and 273 women were placed in regular employment.

SASKATCHEWAN

Employment offices in Saskatchewan during May listed nearly 34 per cent fewer workers than in April, 1937, or in May last year. Placements, likewise, showed a decline of over 35 per cent from the preceding month and of more than 33 per cent from the corresponding period a year ago. Except for nominal gains in transportation and trade, all industrial divisions showed losses in placements when compared with May, 1936, the greatest of these being in farming and construction and maintenance. Placements by industrial divisions included:—manufacturing 52; logging 61; farming 444; construction and maintenance 83 and services 807, of which 570 were of household workers. There were 490 men and 353 women placed in regular employment during the month.

ALBERTA

The demand for workers, as indicated by orders listed at offices in Alberta during May, showed practically no change from that recorded during April, 1937, but was nearly 9 per cent less than that of May a year ago. Placements were over 2 per cent fewer than in the previous month and 11 per cent below those reported during the corresponding period last year. A marked gain in placements over May, 1936, was shown in construction and maintenance, but this was more than offset by a substantial decline in farming, as well as losses of smaller proportions in services, manufacturing, mining and trade. Logging and transportation showed nominal gains. Industrial groups in which most of the placements were effected included:—farming 457; construction and maintenance 979 and services 538, of which 365 were of household workers. During the month 1,465 men and 313 women were placed in regular employment.

BRITISH COLUMBIA

During May, orders received by British Columbia offices were over 40 per cent better than in the previous month and nearly 91 per cent in excess of May, 1936. Placements also were almost 40 per cent higher than in April and more than 90 per cent above those listed during the corresponding month a year ago. While all groups showed gains in placements over May last year, the general improvement was largely due to greatly increased placements in logging, as well as a substantial increase in construction and maintenance, gains in all remaining industries being much smaller in volume. Placements by industrial groups during the month included:—manufacturing 69; logging 1,128; farming 158; mining 63; transportation 44; construction and maintenance 2,245; trade 57 and services 828, of which 511 were of household workers. Regular placements numbered 3,071 of men and 281 of women.

Movement of Labour

During the month of May, 1937, the offices of the Employment Service of Canada effected 22,927, placements in regular employment 13,161 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 2,240 were granted the Employment Service reduced transportation rate, 2,091 going to centres within the same Province as the despatching office and 149 to other Provinces. The reduced transportation rate, which is 2·5 per cents per mile with a minimum fare of $4, is granted by the Railway Companies to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

In Quebec during May the Hull office granted two certificates to bushmen bound for the Pembroke zone. Workers benefiting by the Employment Service reduced transportation rate in Ontario during May numbered 1,858, of whom 1,857 were destined to Provincial employment. Of these, 1,372 secured their certificates at the Port Arthur office for transportation to various centres within the district covered by that city office, included among whom were 1,364 bush workers, 3 mine workers, one blacksmith, one restaurant waitress, one labourer, one farm hand, and one housekeeper. To the Port Arthur zone also, one butcher was conveyed from Sudbury. The Fort William office was instrumental in the transfer of 316 bush workers and 2 cooks, and the Sudbury office of 161 bush workers, within their respective zones. Granted certificates at Timmins, 2 mine workers proceeded to Fort William, while from North Bay 2 carpenters and one engineer were transported to employment in the Timmins zone. The one person travelling outside the Province was a mine cookee shipped from Timmins to Rouyn. Manitoba transfers at the reduced rate during May were 187 in number and effected by the Winnipeg office, 41 of which were provincial and 146 interprovincial. The labour movement within the Province was entirely to points in the Winnipeg zone and included the transfer of 28 highway construction workers, 5 farm hands, one farm household worker, 3 mine workers, 2 hotel employees, one bushman and one blacksmith. The Port Arthur zone was the destination of all persons journeying outside the Province, among whom were 135 bushmen, 5 mine workers, 2 farm hands, 2 hotel workers, one blacksmith and one cook. Business transacted by Alberta offices during May involved the issue of 182 reduced rate certificates, all to centres within the Province. The majority of these were granted at the Edmonton office which arranged for the transportation of one engineer to Calgary and of 55 highway construction workers, 41 transportation company employees, 18 fish company employees, 12 building construction workers, 9 oil refinery workers, 6 sawmill employees, 6 mine workers, 5 carpenters, 5 labourers, 4 bushmen, 3 parks employees, 3 farm hands, one farm domestic, 2 waitresses, 2 cooks, 2 housekeepers, 2 hotel employees, and one store clerk, to employment at centres within the Edmonton zone. From Calgary one farm hand and one farm housekeeper were conveyed to Drumheller, and 2 farm hands within the Calgary zone. The movement of labour in British

Columbia during May was provincial and comprised the transfer of 11 persons. From Vancouver one millwright travelled to Nelson, one hotel cook to Penticton, and 7 mine workers to employment within the Vancouver zone. The Prince Rupert office was responsible for the despatch of 2 mine workers within the territory administered by that city office.

Of the 2,240 workers who took advantage of the Employment Service reduced transportation rate during May, 1,209 were conveyed by the Canadian National Railways, 998 by the Canadian Pacific Railway, 21 by the Northern Alberta Railway, 6 by the Temiskaming and Northern Ontario Railway, and 6 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During May, 1937

The value of the building permits issued by 58 cities during May, 1937, was lower by 11·5 per cent than in April, 1937, but was higher by 11·6 per cent than in May, 1936, being in fact, higher in that month than in any other year since 1932. According to statements tabulated by the Dominion Bureau of Statistics, the authorizations amounted to $5,399,489, as compared with $6,098,036 in the preceding month, and $4,836,358 in May of last year.

The value of the building authorized in the first five months of the present year was $21,967,654; this was considerably higher than the aggregate of $13,666,195 reported in the period January-May, 1936, and was also higher than in the first five months of any other year since 1931. The cumulative total for the same period in each of the last six years, however, has been very much lower than in earlier years of the record; while the wholesale prices of building materials have risen in recent months, they continue below the average for the months January-May in the seventeen years, 1920 to 1936.

Some 50 cities furnished detailed statistics for May, 1937, showing that they had issued almost 600 permits for dwellings valued at approximately $1,800,000, and for more than 3,000 other buildings, estimated to cost over $3,200,000. In April, authority was given for the erection of about 500 dwellings and 2,700 other buildings, valued at approximately $1,800,000 and $3,400,000, respectively.

Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Saskatchewan recorded moderate increases in the value of the building represented by the permits issued during May as compared with the preceding month, the greatest gains being in the Maritime Provinces. In Quebec, Ontario, Manitoba, Alberta and British Columbia the May totals were lower than those for April; the largest decline in this comparison was that of $387,407, or 37·2 per cent in British Columbia.

As compared with May, 1936, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Saskatchewan, Alberta and British Columbia registered increases, of which that of $403,698 or 18·9 per cent in Ontario was most noteworthy.

Of the four largest cities, Toronto showed an insignificant gain as compared with last month and a larger increase over the same month of last year; Winnipeg recorded improvement as compared with April, 1937, but a decrease as compared with May, 1936, while in Montreal and Vancouver there were losses in the former but gains in the latter comparison.

Of the other centres, Charlottetown, Halifax, Sydney, Fredericton, Saint John, Quebec, Shawinigan Falls, Westmount, Belleville, Chatham, Fort William, Galt, Guelph, Kingston, Oshawa, Peterborough, Stratford, St. Catharines, St. Thomas, Sarnia, Sault Ste. Marie, Welland, Riverside, Woodstock, Moose Jaw, Regina, Calgary, Nanaimo and New Westminster showed increases in the value of the building authorized as compared with either the preceding month or the same month of 1936.

The following table gives the value of the building authorized by 58 cities in May and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1926 = 100).

Year	Value of permits issued in May	Value of permits issued in first five months	Indexes of value of permits issued in first five months (1926=100)	Average indexes of wholesale prices of building materials in first five months (1926 average=100)
	$	$

As already mentioned, the aggregate for the first five months of 1937 was substantially higher than in the same period in 1936, being also greater than in the months January-May of any earlier year since 1931. The average index numbers of wholesale prices of building materials, while higher than in the last few years, continue below the average for the years 1920-1936.

The following table gives the value of the building permits issued by 58 cities during April and May, 1937, and May, 1936. The 35 cities for which records are available since 1910 are marked thus *.

Meeting of Industrial Accidents Prevention Committee of the I.L.O.

The Committee of the International Labour Office for the Prevention of Industrial Accidents met at the International Labour Office in Geneva from June 28 to 30. This Committee is composed of experts from countries all over the world, who collaborate with the I.L.O. in technical research into measures for decreasing the risks of accidents to which workers are exposed. It was this Committee which drew up the provisions for the safety of workers in the building industry which served as the basis of the important international regulations adopted by the recent International Labour Conference in the form of a Convention and Recommendations.

At the meeting held in June, the experts paid particular attention to the measures to be taken to avoid accidents in the use of ladders and trestles and in the handling of corrosive liquids, and to protect the hands and feet of steel and foundry workers.

The Canadian expert present at this meeting was Mr. R. B. Morley, General Manager of the Industrial Accidents Prevention Association, Toronto.

According to a statement issued recently by the Dominion Bureau of Statistics, gross revenues of Canadian railways for April, 1937, amounted to $29,458,432, or 13·1 per cent above the total of $26,049,673 for April, 1936. Increased operating expenses took $2,159,372 of this, leaving an increase in net operating revenues of $1,249,386. The operating income increased from $5,585,845 in 1936 to $3,856,580, or by $1,270,735. Freight traffic was heavier by 13·5 per cent and freight revenues increased by $3,082,222, or 15·4 per cent. Although passenger miles increased by 5·3 per cent passenger revenues were down by $1,196. The number of employees was increased from 116,737 to 121,583, or by 4·2 per cent, and the total pay-roll was increased 8·1 per cent, or by $1,122,513.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JUNE, 1937

Reports of the Superintendents of the Employment Service

THE Employment situation at the end of June was reported by the superintendents of the Employment Service to be as follows:—

Farm crops in the Maritime Provinces were progressing favourably. There had been an abundance of moisture and the outlook was good for a heavy hay crop. Green garden produce and strawberries also were plentiful. Fishing was only fair, full tides and strong winds having hampered the fishermen, particularly in bringing in their lobster traps. Logging was active, with many pulp cutters in the woods and heavy shipments were being made, by rail, of both hard and soft lumber. Coal mines in the New Glasgow area operated from three to six days per week, while those in Cape Breton and vicinity worked from two to six days, with one mine idle all week. Manufacturing plants were operating fairly steadily and saw mills were running night and day shifts in up-river districts. All buildings under construction were progressing favourably and highway work continued. Transportation, by rail and water, both freight and passenger, was brisk. Wholesale and retail trade was good, with collections favourable. A number of requests was received for household workers in the women's division and placements were made.

There were fewer calls for farm hands in the province of Quebec, but a marked improvement was noted in logging. Mining also was active. Better conditions, likewise, were reported in manufacturing and prospects for the future were encouraging. Metals, tobacco, cigars, boots and shoes, clothing, and iron and steel industries were busier than formerly, while rubber was quiet, Montreal and Quebec city reporting the greatest amount of activity in industrial lines. Building construction was going forward briskly and considerable increase was shown in the construction of buildings, plants and railroads. Highway contractors also were placing many men at work on the roads, and other relief projects were receiving their quota of workers. Transportation was heavy and trade was good. Orders for women for domestic service were numerous, especially for cooks, maids and charwomen, with applicants numerous.

A very heavy demand for experienced farm help throughout Ontario completely exhausted the supply of men available in many centres, but it was considered likely that the new regulations permitting relief recipients to retain their earnings while engaged on farms would reduce the number of unfilled orders. Wages were good, averaging from 20 to 30 dollars per month. Requests for fruit, vegetable and berry pickers, also tobacco workers and others for celery transplanting provided employment for a number of inexperienced hands. A shortage of pulp cutters likewise existed, with the result that logging orders were difficult to fill. Sawmills were operating steadily. Mining was quiet, the only calls being those for surface labour, with many men available for this class of work. The improved industrial level was well maintained in manufacturing centres. Peak staffs, with the exception of seasonal industries, seemed to have been reached and very little additional help was required. In the various fruit-growing districts, canning factories had started to increase production and during the next few weeks would likely be adding to their staffs. Several ex-service men had been placed in industries on probational training under the scheme of the Federal Government's Veterans' Assistance Commission. Activity in building lines continued to increase and showed additional gains in employment for building mechanics. Highway construction was well under way, thus reducing the number of unemployed in the various municipalities in the vicinity of the work. Grain shipments were at a low ebb at Fort William, with no improvement expected until the arrival of the new crop at the lake head, but at Windsor a large number of men was steadily employed loading boats. There were many calls for all classes of house workers, cooks-general, hotel and restaurant workers and berry pickers, but experienced domestic help was still difficult to obtain.

The few calls received for farm hands in the Prairie Provinces were easily filled. Crop prospects in Manitoba were excellent. Good moisture conditions prevailed and in the absence of disease, the outlook was favourable for a bumper crop, but elsewhere in the West continued drought and dust storms had damaged many acres of grain. Hay was almost a complete failure in many districts, and some of the farmers in the dried-out areas were already applying for work for themselves. Logging was fairly active, but experienced hands were difficult to obtain. Mining was quiet and manufacturing unchanged. Building construction was slack, except at Winnipeg, and there was little call for help. A number of men, however, had been placed on highway work. Trade showed little change. In the women's domestic section, a slight improvement was noted though the demand for help was lighter than that of previous years.

There was little call for farm help in British Columbia, as rain had delayed haying operations. Spraying of the fruit orchards had commenced and the few requests for thinners were easily supplied. Early cherries had started coming in to the packing houses but were of poor quality, thus fewer orders were received for packing-house employees. Rains had interfered with the strawberries, with an estimated loss of 15 per cent to most of the growers. This, however, would be counterbalanced by an increased loganberry and small-fruit crop. Some of the logging camps were operating on full time, but others were slack. Saw-mills were busy, but several shingle mills were operating with reduced crews. Troll fishermen were getting big catches of spring salmon and reports stated that the fishing was better than that experienced for many years. Mining was active at Nelson, Penticton and Falkland, but quiet at Prince Rupert. Road and general construction work was somewhat more active, as considerable repair work was being done by the various municipalities on roads in the surrounding districts. At Prince Rupert, drydocks, shipyards and longshore workers were fairly busy, and at Victoria several ships were being loaded with lumber, but at Vancouver, shipping and longshore work was extremely quiet. Trade was fair. A good demand existed for cooks-general in the women's section, with a scarcity of experienced help, but a number of women had found casual employment as berry pickers. Summer camps and hotels, also, were opening up and thus created an outlet for waitresses and kitchen help.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, June, 1937, summarized the employment situation as follows:—

Employment at 24th May showed little change on the whole as compared with 19th April. There was an improvement in employment, between the two dates, in building and public works contracting, general engineering, the distributive trades, hotel and boarding house service, and the road transport services outside the London area. There was also a seasonal improvement in agriculture and fishing. On the other hand, there were increases in the numbers recorded as unemployed in the coal mining, boot and shoe, woollen and worsted, textile bleaching, dyeing, etc., cotton, clothing, ship building and repairing, and iron and steel industries. In some of these industries, particularly coal mining and woollen and worsted manufacture, employment on the date to which the figures relate was affected by holiday stoppages.

It is estimated that at 24th May, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,387,000. This was 7,000 less than at 19th April, 1937, but 469,000 more than at 25th May, 1936.

Among insured workpeople, aged 16-64 (excluding those within the agricultural scheme), the percentage unemployed (including those temporarily stopped) in Great Britain and Northern Ireland at 24th May, 1937, was 10·9, as compared with 10·8 at 19th April, 1937, and 12·8 at 25th May, 1936. In Great Britain the percentage at 24th May, 1937, was 10·7, as compared with 10·5 at 19th April, 1937, and 12·6 at 25th May, 1936.

At 24th May, 1937, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,173,802 wholly unemployed, 207,228 temporarily stopped, and 70,300 normally in casual employment, making a total of 1,451,330. This was 3,113 less than a month before, and 253,712 less than a year before. The total was made up of 1,151,867 men, 36,420 boys, 224,715 women, and 38,328 girls.

The total of 1,451,330 persons on the registers at 24th May, 1937, included 652,316 persons with claims admitted for insurance benefit (of whom 2,359 had applications authorized for payment of unemployment allowances in supplementation of benefit), 34,911 claimants whose position under the conditions relating to contributions paid and benefit received had not been determined, and 5,766 persons disqualified for short periods from receiving benefit (of whom 2,032 had applications authorized for payment of unemployment allowances). There were also 601,312 persons (not included in any of the foregoing classes) with applications authorized for unemployment allowances, 2,190 persons with applications for unemployment allowances under consideration, and 154,835 other persons, of whom 32,939 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at 24th May, 1937, was 1,519,260, as compared with 1,525,708 at 19th April, 1937, and 1,768,246 at 25th May, 1936.

United States

Employment and payrolls continued to expand from April to May, in the combined manufacturing and non-manufacturing industries surveyed monthly by the United States Bureau of Labor Statistics, according to a statement issued by Frances Perkins, Secretary of Labor.

Based on reports received by the Bureau, it is estimated that 77,000 workers were returned to employment over the month interval in the industries surveyed and that weekly payrolls were nearly $5,200,000 greater than in the preceding month. These gains continue the virtually unbroken successions of monthly increases which have been reported since the earlier months of 1936.

Comparisons of employment and payrolls in these combined industries in May, 1937, with May, 1936, show an increase of more than 1,450,000 workers over the year interval, and an increase of nearly $70,000,000 in weekly payrolls.

MANUFACTURING INDUSTRIES

The combined reports received from manufacturing establishments employing approximately 55 per cent of the total number of factory wage earners of the country showed an increase of 0·1 per cent in employment from April to May and an increase of 0·2 per cent in weekly pay rolls. These gains, while slight, are noteworthy as factory employment has increased in May in only 6 of the preceding 18 years for which data are available and pay rolls have increased in only 9 instances.

The May factory employment index (102·2) stands above the level of any month since November, 1929, and is 13·8 per cent higher than in May, 1936 (89·8). The May pay roll index (105·1) is above the level of any month since October, 1929, and shows an increase of 30·1 per cent over May, 1936 (80·8).

Increased employment was reported in 50 of the 89 manufacturing industries surveyed and increased pay rolls were reported in 47 industries. A seasonal increase of 18·0 per cent in employment was shown in the ice cream industry. Firms manufacturing rubber tires and tubes reported a gain of 15·1 per cent. Seasonal gains ranging from 3·2 per cent to 6·1 per cent were shown in the brick-tile-terra cotta, beet sugar, tin can, marble-slate-granite, beverage, and butter industries. Other industries reporting substantial gains in employment over the month interval were: electric- and steam-railroad car building (5·0 per cent), engines-turbines-tractors (3·1 per cent), copper, lead, and zinc smelting and refining (2·8 per cent), electrical machinery, apparatus, and supplies (2·7 per cent), and automobiles (2·7 per cent). Gains were noted in a number of industries manufacturing building materials and supplies. In addition to the increases mentioned above in the brick-tile-terra cotta and marble-slate-granite industries, gains were shown in cement (2·0 per cent), sawmills (1·8 per cent), structural metalwork (1·6 per cent), paints and varnishes (1·4 per cent), glass (1·3 per cent), plumbers' supplies (1·0 per cent), and steam fittings and steam and hot water heating apparatus (0·3 per cent). The blast furnace-steel works-rolling mill industry showed a gain of 1·5 per cent in employment. Other industries of major importance in which gains were noted were: foundries and machine shops (1·9 per cent), baking (1·5 per cent), chemicals (1·3 per cent), petroleum refining (1·3 per cent), slaughtering and meat packing (1·1 per cent), paper and pulp (0·9 per cent), and book and job printing (0·7 per cent).

The most pronounced decreases in employment from April to May were seasonal in character. The fertilizer industry reported a decline of 30·3 per cent; cotton seed oil-cake-meal, 18·5 per cent; canning and preserving, 11·4 per cent; boots and shoes, 4·6 per cent, and confectionery, 4·4 per cent. Radios and phonographs showed a decline of 15·8 per cent, due primarily to strikes. Each of the 14 industries comprising the textile group reported declines in number of workers, with the exception of the cotton goods industry, in which employment remained practically unchanged. Seasonal recessions in employment were shown in the following textile industries: millinery, 8·2 per cent; women's clothing, 5·7 per cent; shirts and collars, 5·0 per cent; and men's clothing, 3·1 per cent. Employment in silk and rayon goods mills decreased 4·4 per cent over the month interval and the woollen and worsted goods and the knit goods industries reported declines of 1·7 per cent and 1·5 per cent respectively.

The indexes of factory employment and payrolls are computed from returns supplied by representative establishments in 89 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-1925, taken as 100. They have not been adjusted for seasonal variation. Reports were received in May, 1937, from 23,508 manufacturing establishments employing 4,637,174 workers, whose weekly earnings during the pay period ending May 15 were $122,804,195.

NON-MANUFACTURING INDUSTRIES

Twelve of the 16 non-manufacturing industries surveyed showed gains in employment from April to May and 14 industries reported gains in payrolls. Comparisons with May, 1936, showed gains in employment in each of these industries over the year interval, with the exception of anthracite mining. The industries in which the most pronounced employment gains were shown by these yearly comparisons were metalliferous mining (28·7 per cent), private building construction (11·8 per cent), telephone and telegraph (8·6 per cent), electric light and power and manufactured gas (6·2 per cent), and wholesale trade (6·9 per cent). Increases of 5 per cent or more over the year interval were shown in quarrying and non-metallic mining, crude petroleum producing, laundries, brokerage, and retail trade.

Wholesale and Retail Trade.—Employment in wholesale trade establishments decreased 1·6 per cent from April to May, according to reports supplied by 13,587 establishments employing more than 270,000 workers in May. While gains were reported in 18 of the 33 branches of wholesale trade surveyed, seasonal declines in a number of lines resulted in a net decrease in employment for the wholesale group as a whole. Among the lines of wholesale trade in which gains were reported over the month interval were food products (1·9 per cent), machinery, equipment and supplies (0·9 per cent), chemicals, drugs, etc. (0·8 per cent), electrical goods (0·6 per cent), hardware (0·4 per cent), and paper and paper products (0·4 per cent). Sharp seasonal curtailment was reported in the wholesale farm products group and also in the group of assemblers and country buyers. Among the major lines of wholesale trade in which decreased employment was shown were dry goods and apparel (0·6 per cent), petroleum and petroleum products (0·4 per cent), and groceries (0·2 per cent).

Employment in retail trade establishments in May increased 0·9 per cent above the April level, according to reports received from 49,652 establishments employing 857,985 workers in May. The increase was due primarily to expansion in the general merchandising group of retail stores, composed of department, variety and general merchandising stores and mail order houses, in which employment rose 1·9 per cent. Other retail trade establishments showed a net increase of 0·6 per cent. Among the other lines of retail trade in which increased numbers of workers were reported over the month interval were hardware (2·8 per cent), lumber and building materials (2·1 per cent), furniture (1·4 per cent), automotive (1·3 per cent), apparel (0·7 per cent), and drug stores (0·4 per cent). Employment in food stores remained practically unchanged, while losses ranging from 0·1 per cent to 2·3 per cent were shown in retail jewelry, wood-coal-ice, and farmers' supplies stores.

Public Utilities.—Each of the 3 public utility industries surveyed showed increases in number of workers from April to May, the gains bringing the May employment indexes to the highest levels in recent years. Employment in the telephone and telegraph industry increased 1·6 per cent over the month interval. Power and light companies reported a gain of 1·8 per cent in number of workers, the May level exceeding that of any month since September, 1931, and electric railroad and motor-bus operation and maintenance companies reported an increase of 0·5 per cent.

Service Industries.—A seasonal expansion of 4·5 per cent in employment from April to May in the dyeing and cleaning industry raised the May index (88·8) above the level of any month since July, 1931. Laundries also reported a seasonal gain in employment (2·1 per cent). Insurance firms reported 0·4 per cent more employees in May than in the preceding month. Brokerage firms reported a loss of 1·3 per cent in employment, and year-round hotels showed a decline of 0·6 per cent, due primarily to labour difficulties in certain Pacific Coast hotels.

Mining Industries.—Employment in bituminous coal mining in May showed a partial recovery from the sharp decline registered in the preceding month, the increase of 6·8 per cent in employment over the month interval being coupled with a rise of 25·1 per cent in payrolls. Quarries and non-metallic mines reported a seasonal expansion of 3·4 per cent, the gain bringing the May index above the level reported in May of any year since 1931. Metal mines also continued to expand their working forces, the gain of 2·7 per cent continuing the almost unbroken expansion which has been shown since July, 1935, and raising the May, 1937, index (78·3) to the highest point reached since August, 1930. Employment in the crude-petroleum producing industry rose 0·9 per cent from April to May, continuing the succession of gains which have been shown for the preceding 4 months. Anthracite mines reported a decrease of 5·5 per cent in employment, coupled with a decline of 30·5 per cent in payrolls. These decreases were due primarily to strikes in certain mines and holiday observance during the May 15 pay period.

Private Building Construction.—A further expansion in employment and payrolls was shown in the private building construction industry between April and May. Employment rose 7·8 per cent over the month interval and payrolls increased 13·3 per cent, according to reports received from 9,312 contractors employing 119,086 workers in May. Employment in this industry in May, 1937, was 11·8 per cent higher than in May, 1936, and payrolls showed an increase of 29·3 per cent over the year interval. The reports received from co-operating firms cover only employees engaged in erecting, altering and repairing private buildings and do not include projects financed by Public Works Administration or Reconstruction Finance Corporation funds or regular appropriations of the Federal State and local governments.

PUBLIC EMPLOYMENT

Employment on projects of The Works Program was 3,034,000 in May, a decrease of 147,000 compared with April. Of the total number of workers engaged on the program 2,145,000 were working on projects operated by the Works Progress Administration. Payroll disbursements during the month for all workers employed on The Works Program totalled $132,177,000. The value of material orders placed amounted to $35,569,000.

During May approximately 201,000 workers were employed on construction projects financed from funds provided by the Public Works Administration. This was an increase of 9,000 or 5 per cent compared with the number working in April. Of the total employees 64,000 were engaged on projects financed by funds provided by the National Industrial Recovery Act and 137,000 on projects financed from funds provided by the Emergency Relief Appropriation Acts of 1935 and 1936. Payroll disbursements during May on all projects financed by the Public Works Administration totalled nearly $15,173,000 and orders were placed for materials valued at more than $27,342,000.

There were 349,000 workers employed on emergency conservation work in May, a decrease of 20,000 compared with April. This decrease was caused by the end of an enlistment period and primarily affected the number of enrolled workers and reserve officers. Small increases, on the other hand, were registered in the number of educational advisers and supervisory and technical employees.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages

and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:—

NATIONAL HARBOURS BOARD

Contracts in Group "A" (Construction, Remodelling, Repair, Etc.)

Construction of an extension to the wharf, sections 48 and 49, Montreal Harbour, P.Q. Name of contractors, Angus Robertson Limited, Montreal, P.Q. Date of contract, June 17, 1937. Amount of contract, approximately $414,711. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmith	$0 60	8	44
Blacksmith's helper	0 45	8	44
Boatmen	0 40	8	44
Carpenters and joiners	0 70	8	44
Cement finishers	0 60	8	44
Cement and concrete mixer operators—steam	0 65	8	44
gas or electric	0 50	8	44
Compressor operator, gas or electric	0 50	8	44
Crane operator	0 55	8	44
*Divers	14 00 per day	8	44
*Divers' tenders	5 00 per day	8	44
*(Full days' s pay to be allowed whether employed full or part time.)	per hour		
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Drivers	0 40	8	44
Drill runners	0 50	8	44
Engineers, operating steam:			
1 or 2 drum	0 65	8	44
3 or more	0 75	8	44
Firemen, stationary	0 50	8	44
Hoist operator, gas or electric	0 50	8	44
Labourers	0 40	8	44
Machinists	0 65	8	44
Motor boat operators	0 45	8	44

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceedkd on this work.

Accidents Reported to Ontario Workmen's Compensation Board

In a statement issued by the Workmen's Compensation Board of Ontario the total number of accidents reported to the Board during June was 6,357 compared with 5,334 in June, 1936. The number of fatalities during the month was 31, in comparison with 39 in June, 1936. Total awards for compensation and medical aid amounted to $508,448.58, as against $445,407.62 for the same period last year. The cost of medical aid only for June, 1937, was $99.763.82.

The statement also showed that there have been 31,231 accidents reported to the Board during the first half of 1937 compared with 27,845 accidents during the same period of 1936. There is also an increase of 24 in the number of fatalities (176) in the first six months of 1937 as compared with 1936.

There were 34,138,000 persons employed in nonagricultural industries in the United States in March, 1937, according to estimates made by the United States Bureau of Labor Statistics. This represented an increase of more than 8,200,000 above the low point of the depression in March, 1933, and brought the total to within about 1,240,000 of the number employed in March, 1929.

Workmen's Compensation Claims in Quebec

An increase of 50·33 per cent in the number of claims registered with the Province of Quebec Workmen's Compensation Commission during the first six months of 1937 as compared with the same period of 1936 was reported recently to the directors of the Quebec Association for the Prevention of Industrial Accidents.

The figures show that there were 8,997 more claims in the first six months of 1937 than in the same period of 1936. The total number of claims for the first six months of 1937 was reported as 26,873, compared with 17,876 for 1936.

United States Fair Labor Standards Bill

Before joint hearings of the United States Senate Committee on Education and Labor and the House of Representatives Committee on Labor with reference to the Fair Labor Standards Bill of 197, Frances Perkins, Secretary of Labor, stated that the present draft of the Fair Labor Standards Bill has three main objectives: (1) to exclude from the channels of commerce goods produced by industries employing child labour and engaging in other oppressive labour practices; (2) to establish basic nonoppressive wage and hour standards and to apply them as rapidly as possible to industries of an interstate character; (3) to create a Board to fix fair minimum wages and a reasonable work week for industries where the bargaining power of workers has not been sufficiently great to achieve fair working conditions under collective agreements.

The bill contains provisions for imposing penalties upon willful violators of the labour standards, and authorizes the Board to invoke the equity jurisdiction of the Federal Courts for enforcement of its orders. It contains well defined guides for the determination of the fair labour-standards orders and gives the Board latitude in establishing geographic differentials and special exemptions and tolerances in situations which the Board deems desirable in order to prevent any impairment of industrial activity through too rigid a coverage.

Forty-five States in the U.S.A. have union-label laws which authorize associations of employees to adopt a device to designate the products of their labour. These laws secure to labour organizations the right to register, use, and protect from counterfeit or unauthorized use the trade marks or labels chosen by them to distinguish the products of union labour from other goods or manufactured articles.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Food, Drink and Tobacco

VANCOUVER, B.C.—CERTAIN BAKERIES AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL 468.

Agreement to be in effect from June 1, 1937, to June 1, 1938, and thereafter from year to year, subject to notice.

This agreement which is in effect at eight bakeries, is similar to that summarized in the LABOUR GAZETTE, May, 1937, page 575, for one firm, which agreement has been superseded by this one. The only change in this agreement from the above is in the weekly wage rates:—

Minimum weekly wage rates: doughman $31.50 (an increase of $4.20 per week), ovenman $30.50 (an increase of $3.20), bench hands and machinemen $27.75 (an increase of $3.15), helpers $24 (an increase of $3.85), shippers $30 (no change), assistant shipper and checker $23.30 (an increase of $2.30), finishers and cake wrappers $17 (no change), apprentices $12 per week for first six months (a decrease of $3).

Manufacturing: Pulp, Paper and Paper Products

LIVERPOOL, NOVA SCOTIA.—A CERTAIN PAPER MANUFACTURING COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL NO. 259), THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL NO. 141) AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 709.

The agreement is to be in effect from January 1, 1937, to May 1, 1938, and thereafter from year to year, subject to notice.

All permanent employees to maintain union membership in good standing and preference to be given to union members when hiring new employees.

Overtime: all work on Sundays and three specified holidays to be paid for at time and one-half.

Two wage schedules were attached to the agreement, the first effective from January 1, 1937, providing for increases in wages of 2 cents per hour over the rates previously in effect and the second, effective May 1, 1937, providing for a further increase of 1 cent per hour for pulp, sulphite and paper mill workers including electrical workers and of an increase for paper rates to the 1935 union schedule, with certain exceptions:—

Hourly wage rates for certain classes of work, from May 1, 1937, are as follows: wood handlers, 37 cents; block pile—powder man 43 cents; wood room—drum operators, bark press operator, truck driver 43 cents, conveyer men 39 cents, cleaners, wood handlers and labourers 37 cents; chipper room—chipper men 39 cents; knife grindermen 47 cents, chip bins 37 cents; sulphite mill—digester cooks 83 cents, helpers 56 cents, acid makers 71 cents, blowpit men 40 cents, sulphur and limestone handler 43 cents, helper 37 cents; groundwood mill—stone sharpener 60 cents, grindermen 47 cents, magazine loaders 40 cents, cleaners 37 cents; paper machine room—boss machine tender $1.88, machine tender $1.68, backtender $1.41, windermen $1.05, fourth hand 66 cents, fifth hand 50 cents, sixth hand 42 cents, beater engineer 92 cents, beater men 43 cents, boss swiper $1.05, swipers 40 cents; wharf storage—crane operator 47 cents, storage men 43 cents; finishing room—paper inspector 82 cents, finishers 43 cents, other classes 47 cents; steam department—turbine engineers 69 cents, water tenders, firemen and oilers 60 cents, other classes 43 to 65 cents; electrical department—operators and motor attendants 69 cents, repairman 73 cents; mechanical department—machinists, welders, blacksmiths, roll grinders, carpenters 53 to 69 cents, helpers 37 to 52 cents, pipe fitters 48 to 69 cents, painters 37 to 47 cents, oilers 42 to 47 cents, apprentices 28 to 52 cents; yard and tracks—crane operator 66 cents, yardmaster and locomotive driver 56 cents, gatemen and watchmen 40 cents; laboratory—testers 37 to 46 cents; boom men 37 to 40 cents; wharf—labourers 37 cents, dock labourers 43 cents, checkers, windermen and coal drag operators 47 cents, transfer car operator 51 cents.

A mutual interest board made up of equal representation of union men and management will be formed and will meet regularly to discuss matters of mutual interest and once a year to discuss the agreement.

No strikes or lockouts to occur during the period of this agreement. Any dispute which cannot be settled by the local union and the manager or by the international president and the president of the company, will be referred to a board of arbitration consisting of one representative of each party and a third chosen by them, or if they cannot agree, the third will be named by the Premier of Nova Scotia.

THREE RIVERS, QUEBEC.—A CERTAIN PAPER MANUFACTURING COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL NO. 136)

Agreement to be in effect from May 2, 1937, to April 30, 1938, and therafter from year to year, subject to notice.

The Company recognizes the two unions as representatives of their membership for collective bargaining. Any employee who is now or who becomes a member shall maintain such membership in good standing. When hiring new employees preference to be given to union members, if capable members available. Any non-union man now working or to be hired will abide by the general rules of the unions parties to the agreement and will refrain from activities on behalf of rival unions.

Hours: for day workers and tour workers 8 per day, a 48-hour week.

Overtime for day workers: time and one-half except for certain exceptions specified; work on Sundays and four specified holidays, time and one-half, and those working on these days to be entitled to take one day off in the week.

Wages per hour for certain classes of work: (The wage scale for paper makers has not yet been received in the Department): machine room—oilers 50 cents, millwrights 60 and 76 cents, machine operators 76 and 81 cents, helper 47 cents; sulphite mill—cooks 88 cents, first helpers 55 cents, stone handlers 41 cents, blow pit men 44 cents, helper 40 cents, piper 68 cents, helper 44 cents, pyrite burner men 44 and 49 cents, cleaner 40 cents; grinder room—stone sharpeners 52 cents, grindermen 47 cents, millwrights 66 cents, helpers 45 cents, oilers 46 cents; screen room—mixermen 55 cents, stock runners 45 cents, oiler 46 cents, millwright 66 cents, helper 45 cents, mould coverer 50 cents; finishing room—truckers, checkers, weighers 45 cents, coreman 50 cents, other classes 40 to 44 cents; yard—crane runner 66 cents, yardman 55 cents; truck drivers 42 and 45 cents, labourers 40 cents; wood handling—millwright 61 cents (50 cents for night work 13 hours per night), motorman chipper room 47 cents, other classes 40 and 41 cents; testers—44 to 50 cents; cleaner and spare watchman 40 cents; lapping—millwright 66 cents, helper 45 cents, wet machine operators and truckers 40 cents, pressmen 41 cents; pipers 68 cents, helpers 40 and 44 cents; boiler house—millwright 66 cents, helpers 40 and 47 cents, fireman 60 cents, motorman 55 cents, coal men 40 cents; electric power—switchboard operators 71 cents, motormen 47 and 66 cents; electricians—mechanics 71 and 76 cents, helpers 41 cents; millwrights—machinist 66 and 70 cents, millwrights 60 to 71 cents, millwrights' helpers 42 to 50 cents, roll grinder man 66 cents, blacksmith 72 cents, welder 76 cents, tinsmith 62 and 76 cents.

No strikes or lockouts to occur during the period of the agreement. Disputes which cannot be settled between the management and the union will be referred to arbitration.

Manufacturing: Textiles and Clothing

ST. HYACINTHE, QUEBEC.—A CERTAIN SILK MANUFACTURING COMPANY AND THE NATIONAL CATHOLIC UNION OF TEXTILE WORKERS OF ST. HYACINTHE.

Agrement reached following strike reported on page 730 of this issue.

Agreement to be in effect from June 21, 1937, to May 1, 1938.

Only union members to be employed.

Wages: piece work rates are set for weavers working on the four looms system with provision for revision for a six looms system or an automatic system. For night work weavers to be paid 10 per cent extra. For sample work weavers to be paid 10 cents per hour extra. Loom fixer and smash fixers to be paid salaries. Men doing general work to be paid a minimum of 25 cents per hour. Young men or boys to be paid $8 per week for first year, $9 for second year and $10 for third year. Quillers to be paid a minimum of $10, apprentice quillers $8 per week during first month, $9 during second month and $10 after three months. Spinners rate increased from 27½ to 30 cents per hour. Winders, rewinders and warpers to be granted increases of from 8 to 12½ per cent.

Manufacturing: Iron, Steel and Products

HESPELER, ONTARIO.—A CERTAIN STAMPED AND ENAMELLED WARE MANUFACTURING FIRM AND THE MEMBERS OF THE EMPLOYEES' UNION.

Agreement reached following strike reported on page 731 of this issue.

Agreement to be in effect from June 24, 1937, to May 31, 1938. A joint conference to be held in May, 1938, to negotiate an agreement.

No discrimination to be shown employees on account of union activity.

Hours: 9 per day, 5 on Saturday, a 50-hour week.

Overtime: time and one half.

Wages: an increase of 4 cents per hour is granted on all existing day rates and 5 cents per hour for all employees now receiving 15 cents per hour. Piece rates are to be increased to those in effect in 1929.

No stoppage of work to occur on account of any dispute. Disputes are to be settled between the grievance committee and the management, or, if necessary, referred to an impartial umpire.

Construction: Buildings and Structures

TORONTO, ONTARIO.—SHEET METAL CONTRACTORS SECTION OF THE BUILDERS EXCHANGE AND CONSTRUCTION ASSOCIATION OF TORONTO AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 30.

Agreement reached following strike reported on page 731 of this issue. Agreement to be in effect from June 1, 1937, to February 28, 1939, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1936, page 830, and July, 1935, page 692, with the following change:

Wages per hour for sheet metal workers: 87½ cents until March 31, 1938, and 97½ cents from April 1, 1938, to February 28, 1939. (The previous rate was 82½ cents.)

WINDSOR, ONTARIO.—ELECTRICAL CONTRACTORS OF THE COUNTY OF ESSEX AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 773.

Agreement to be in effect from May 1, 1937, to April 30, 1938.

Union members only to be employed.

Hours: 8 per day, 5 days per week, a 40-hour week.

Overtime and all work on Saturdays, Sundays and six specified holidays, double time.

Wages for journeymen electrical workers: $1.15 per hour. Any job employing four or more journeymen must have a journeyman as supervisor or lay-out man, who is to be paid 10 per cent above journeyman's rate.

Apprentices to be indentured under the Ontario Apprenticeship Act. Not more than one apprentice to each three journeymen in any shop or job.

Wages for apprentices: 35 cents per hour during first year, 45 cents during second year, 55 cents during third year and 75 cents during fourth year.

Windsor, Ontario.—General Contractors Section of the Essex County Builders' and Contractors' Association and the United Brotherhood of Carpenters and Joiners, Local No. 494.

Agreement to be in effect from May 15, 1937, to March 31, 1938.

Only union members to be employed.

Hours: 8 per day, a 5-day week, 40 hours per week. No work on Saturday except for emergencies or in connection with the pouring of concrete, when straight time will be paid from 8 a.m. to noon on Saturday and double time the rest of the day. When work is carried on in two or more shifts, men on the second and third shifts will be paid 8 hours' pay for 7 hours' work.

Overtime: time and one half for the first hour. All other overtime and work on Saturdays (except as noted above), Sundays and five specified holidays, double time.

Minimum wages per hour for carpenters: $1. Foremen to be paid 10 cents per hour extra.

Apprentices to be employed in accordance with the Ontario Apprenticeship Act.

Any disputes which cannot be settled satisfactorily by the parties to the agreement will be referred to the Industrial Standards Act Board.

Transportation and Public Utilities: Street and Electric Railways

Montreal, Quebec.—Montreal Tramways Company and Their Employees.

Agreement to be in effect from July 1, 1937, to June 30, 1940, and thereafter from year to year subject to notice.

This agreement is similar to the agreement previously in effect and summarized in the Labour Gazette October, 1936, page 949, with certain changes, among them the following:

Wages per hour: conductors, motormen and starters—45 cents during first year, 50 cents during second year, and 55 cents after two years' service (increases of 4 cents per hour over last year's rates); motorbus drivers—56 cents during first year and 60 cents for second year's service (increase of 4 cents per hour); hillmen and switchmen—35 cents during first year (an increase of 6 cents per hour) and 37 cents for second year's service (an increase of 4 cents per hour).

Wages per hour for construction department —labourers 35 cents (an increase of 4 cents).

Wages per hour for road department (track work): subforeman 55 cents for summer work, 51 cents for winter work, 49½ cents for snow work; spring-switch inspectors 51 cents; trackmen (city) 49½ cents for summer and winter work, 44 cents for snow work; trackmen (suburban lines) 47 cents for summer and winter work and 44 cents for snow work; section men 42 cents. (These are increases of 4 cents per hour in all cases.)

In the Youville shops and in the Car Barns, a period of not less than 40 hours shall constitute a working week for all regular car barn employees. The salaries of employees paid on a monthly basis and earning less than $250 per month who are now receiving a smaller salary than they were receiving prior to January 1, 1933, by reason of the reduction of 10 per cent, which came into effect on that date, will be increased as from July 1, 1937, to the figure they were receiving before such reduction was made.

A new clause in the agreement provides that when the total gross receipts of the company from its passenger bus and tramway fares (excluding receipts from specially chartered buses and trams) for the twelve month period ending June 30, 1938, 1939 and/or 1940 exceeds a certain specified amount, the company will set aside 25 per cent of such excess as a fund to be paid as additional remuneration to such of its employees, not officers of the Company, who have earned $2,500 or less during this period and who have been continuously on the Company's pay-roll during this period, each employee being entitled to receive as his share of this fund an amount in the same proportion to the total fund as his earnings for the period bear to the total earnings of all employees entitled to participate in the fund.

Quebec Collective Labour Agreements Extension Act

The following amendment to an agreement has recently been made obligatory by an Order in Council and noted in the next article of this issue:

Furniture Industry, Province of Quebec (Amendment)

Industrial Standards Act of Ontario

The following schedule has recently been made obligatory by an Order in Council and is noted on page 816:

Barbers, Toronto.

Industrial Standards Act of Saskatchewan

The following agreement has recently been made obligatory by an Order in Council and is noted on page 817:

Carpenters, Regina

Industrial Standards Act of Alberta

The following schedule has recently been made obligatory by an Order in Council and is noted on page 818:

Taxi Drivers, Edmonton

Application of New York State Minimum Wage Law

Preparations are being made to apply the new minimum wage law of New York to the laundry, hotel and restaurant, beauty shop, candy, food and cosmetic packing industries of the State according to the June *Survey of Labor Law Administration* published by the United States Department of Labor.

The new law requires that the cost of living be taken into consideration, as well as the value of the services and the wages actually paid in the industry, and the Department of Women in Industry and Minimum Wage has therefore commenced the compilation of cost of living data as a preliminary to the issuance of minimum wage orders. A news bulletin of the Department states that the law may again be operative in the laundry industry late in 1937.

QUEBEC WORKMEN'S WAGES ACT AND COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT

Applications for Extension of Agreements and Orders in Council

The Act respecting Workmen's Wages, passed May 13, 1937, is summarized on page 745 of this issue. It supersedes the Collective Labour Agreements Extension Act, but provides that all agreements in effect under that Act shall remain in effect for the period of the agreement and that the joint committees of employers and employees set up under the repealed Act continue to function under the new Act.

First proceedings under this Act include the approval by Orders in Council of the constitution and by-laws of certain joint committees under this Act, which are noted below, and requests for the extension of certain agreements. Requests for the extension of agreements were published in the *Quebec Official Gazette* as follows: ornamental iron workers at Montreal, longshoremen at Sorel, glove cutters (work gloves) throughout the Province, butcher shops at Sorel, taxi drivers at Sorel and building trades at Sorel, all in the issue of June 5; shoe repairers at Montreal in the issue of June 12; hairdressers at Montreal, shoe workers throughout the Province, barbers at Three Rivers in the issue of June 19; barbers at Chicoutimi and shoe repairers at Victoriaville in the issue of June 26. In addition, a request for the amendment to the Order in Council governing granite cutters throughout the Province was published in the issue of June 5.

FURNITURE INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved March 30, under the Collective Labour Agreements Extension Act, and published in the *Quebec Official Gazette,* June 12, amends the previous Orders in Council for this industry (LABOUR GAZETTE, November, 1935, page 1064, December, page 1157, September, 1936, page 834 and February, 1937, page 218) by adding the names of several employers in Chicoutimi, Daveluyville, Nicolet and Giffard, to the list of employers parties to the agreement.

JOINT COMMITTEES.—The constitutions and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the *Quebec Official Gazette,* June 19:

Longshoremen (inland and coastal navigation), Montreal.

Barbers, Victoriaville.

Building Trades, Quebec.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedule Recently Approved by Order in Council

The Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force "during pleasure" or for a period not exceeding twelve months stipulated in the schedule and thereupon such schedule shall be binding upon every employee and employer in such industry in the whole or any part of the province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette.* The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the LABOUR GAZETTE, summaries are given in this article of the schedules which have thus been approved.

BARBERS, TORONTO.—An Order in Council, dated June 23, and published in *The Ontario Gazette,* June 26, makes binding on all employers and employees in the industry the terms of a schedule governing the barber trade in a zone which includes the city of Toronto and the adjacent suburban area.

The schedule is in effect from July 12, 1937, "during pleasure," and replaces the schedule noted in the LABOUR GAZETTE, October, 1936, page 950.

Work may be performed on any day except Sundays, eight specified holidays and Wednesday afternoon except that work may be performed after noon on Wednesday of any week in which one of the eight holidays occurs. Hours are as governed by municipal by-laws or in those municipalities in which there is no municipal by-law by the hours as so fixed for the city of Toronto.

Minimum wages for full time employees: for those employed full time on a straight salary $25 per week (an increase of $5 over the rate in the previous schedule); for those employed full time on a percentage basis, $15 per week plus 50 per cent of proceeds in excess of $22 from the work performed by the employee plus an additional 10 per cent of such proceeds in excess of $30. Minimum wages for those employed part time or given casual employment: for those employed nights and Saturdays, that is for 4 hours or less Monday to Friday inclusive and all day or less on Saturday, $10 per week plus 50 per cent of the proceeds in excess of $15 from the work performed by the employee; for those employed on Saturdays or the day before a holiday and on the previous evening only, $7 per week plus 50 per cent of the proceeds in excess of $10 from the work performed by the employee; for those employed only for Saturday or the day before a holiday, $5 per day or part thereof plus 50 per cent of the proceeds in excess of $7 from the work performed by the employee; for those working on days other than Saturdays or the day before a holiday, $2.50 per day or part thereof plus 50 per cent of the proceeds in excess of $4 from the work performed by the employee.

No deduction from the minimum wage rates to be made for material supplied, laundry service or operating expenses of any kind.

Minimum charges for each operation in the barbering trade are set and it is provided that no employer or employee may contract for or accept any lower than these prices nor combine any of the operations without charging for each or give any article or premium to the customer without charging for the full value of such.

The Advisory Committee to be appointed according to the Act is authorized to exercise all the powers that may be conferred upon an advisory committee for the barbering industry.

INDUSTRIAL STANDARDS ACT OF SASKATCHEWAN

First Schedule of Wages and Hours Approved by Order in Council

The Industrial Standards Act of Saskatchewan was summarized in the June issue of the LABOUR GAZETTE, page 635. It is similar to the Industrial Standards Act of Ontario. The Act provides that the Minister of Municipal Affairs may, upon petition of employers or employees in any industry (except coal mining and agriculture) authorize an industrial standards officer to call a conference of employers and employees in such industry to investigate conditions and negotiate an agreement concerning hours, minimum rates of wages and overtime rates. If, in the opinion of the Minister, a schedule is agreed upon by a proper or sufficient representation of employers and employees, he may approve it and, upon his recommendation, the Lieutenant Governor in Council may declare it to be binding upon all employers and employees in the industry in the designated zone or zones, during pleasure or for the period not exceeding twelve months stipulated in it. The schedule does not come into effect until ten days after the publication in *The Saskatchewan Gazette*. The Act is to be administered by the Minister of Municipal Affairs and authority to enforce it and the regulations made under it is given to the Commissioner of Labour who is to be assisted by one or more industrial standards officers.

CARPENTERS, REGINA.—An Order in Council, approved June 22 and published in *The Saskatchewan Gazette*, June 30, makes binding on all employers and employees in the carpentry trade in the city of Regina an agreement between representatives of employers and employees in the carpentry trade.

Agreement to be in effect from July 11, 1937, until March 31, 1938.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half. Work on Sundays and five specified holidays, double time.

Wages for carpenters: 75 cents per hour. Wages for foreman 10 cents per hour extra. (A foreman must be employed when there are three or more carpenters on any job.)

Any recognized firm in business for one year and employing five journeymen carpenters is entitled to one apprentice but not more than two apprentices allowed to work on one job unless twenty or more carpenters are employed on the job.

INDUSTRIAL STANDARDS ACT OF ALBERTA

Schedule of Wages and Hours Recently Approved by Order in Council

The Industrial Standards Act of Alberta, 1935, is similar to the Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, 1935, page 534, where are also noted the minor difference between the Ontario and Alberta Acts. The Act provides that the Minister of Trade and Industry for Alberta may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in any industry in any zone or zones, to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry and district. If, in the opinion of the Minister, a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation the Lieutenant Governor in Council may declare such schedule to be in force for a period not exceeding twelve months, and thereupon such schedule shall be binding upon every employee and employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after the publication of the Order in Council in *The Alberta Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Previous schedules under this Act have been summarized in the LABOUR GAZETTE, September, 1935, April, July, September, November, and December, 1936, May, and June, 1937.

TAXI DRIVERS, EDMONTON.—An Order in Council, dated June 29 and published in *The Alberta Gazette*, June 30, makes binding a schedule of wages and hours on all employers and employees engaged in the public service (livery) industry in the city of Edmonton.

The Order in Council is in effect from July 10, 1937, to July 9, 1938.

Hours: 12 per day, 6 days per week with a one hour rest period each day and hours to be computed from the posted time of starting.

Wages: no regularly employed chauffeur shall be paid on a commission basis only. Wages for regularly employed chauffeurs: from April 1 to September 30, $12.50 per week guarantee plus 25 per cent commission on all business over $50 per week; from October 1 to March 31, $15 per week guarantee, plus 25 per cent commission on all business over $60 per week. The wages of temporary chauffeurs shall be *pro rata* of the above schedule. Payment of commissions on authorized credit accounts shall be, where mutually agreed between the employer and chauffeur, deferred until the accounts are collected.

Chauffeurs to be responsible for any damage which they may cause to any of the employers' cars where such damage is occasioned either directly or indirectly by the negligence or lack of skill of the chauffeur, and the employer may deduct the cost of repairing such damages from the chauffeur's wages, together with such damages as the employer may be called upon to pay to the person or property of any person as a result of the chauffeur's negligence or lack of skill, and also loss of business occasioned by such negligence or lack of skill.

No chauffeur to be discriminated against for reporting to the Advisory Board any violation of this agreement.

The Advisory Board may at any time investigate any agreements, partnership or company formations which may have been formed for the purpose of evading the provisions of this schedule.

Youth Guidance Conference in U.S.A.

A guidance Conference, to discuss the pressing needs of youth, both in and out of school, and how the Office of Education, U.S. Department of the Interior, may better serve school and community guidance needs for young people, has recently been held at Washington.

Representatives of various agencies interested in youth guidance, and persons concerned with different approaches to the nation's youth problem, including city and State school guidance experts, mental hygienists, placement directors, personnel officers, and psychologists, met for three days with Commissioner of Education John W. Studebaker and a recently-appointed Office of Education Committee on Youth Guidance.

The conferees, leaders in their fields in education and in industry, offered suggestions to Commissioner Studebaker and the Office of Education Committee regarding future service of the Office along lines of guidance for America's young people, and analyzed and thoroughly discussed the contents of a proposed Office of Education publication, "Planning Community Guidance Programs."

A committee of high-ranking civil servants has been established to scrutinize Department of National Defence contracts with the object of taking the profit from war supplies. It will have authority over all contracts awarded under the $35,000,000 defence program.

The committee consists of Colonel L. R. LaFleche, Deputy Minister of National Defence; Mr. C. Fraser Elliott, Commissioner of Income Tax; Mr. W. C. Clark, Deputy Minister of Finance; Mr. R. Sharp, Chief Inspector of Income Tax; Mr. C. W. Bolton, statistician of the Department of Labour; Mr. H. Marshall, Dominion Bureau of Statistics, and Mr. Charles Burns, director of contracts in the Defence Department.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

IN retail prices the cost of the weekly family budget of staple foods, fuel and lighting and rent was slightly lower owing to a decline in the cost of foods and fuel, while the Dominion Bureau of Statistics weekly index number of wholesale prices advanced during the last half of the month and was considerably higher at the end than at the beginning, the increase being due mainly to much higher grain prices.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.52 at the beginning of June as compared with $8.58 for May. Beef, fresh pork and bread cost more than in the previous month but these increases were more than offset by the lower cost of butter and potatoes. The cost of this same list of foods was $7.79 for June, 1936; $6.67 for March, 1933 (the low point in recent years); and $11.10 for June, 1930. Including the cost of fuel and rent with that of foods the total budget cost $17.20 at the beginning of June as compared with $17.28 for May; $16.33 for June, 1936; $15.41 for June, 1933 (the low point in recent years); $21.44 for June, 1930; $20.58 for June, 1922; $26.92 for July, 1920 (the post war peak); and $14.27 for June, 1914. Fuel cost less during the month under review than in the previous month because of lower prices for coal and wood. Rent was unchanged.

In wholesale prices the Dominion Bureau of Statistics index number on the base of prices in 1926 as 100 was 86·2 for the week ended July 2, as compared with 84·1 for that ended June 11, which was the lowest point reached by the index during the last three months. The figure for the week ended May 28 was 85·1. The latest figures available on a monthly basis are for May when the index number was 85·1 as compared with 72·3 for June, 1936; 63·5 for February, 1933 (the low point in recent years); 93·4 for June, 1929; 97·8 for June, 1922; 164·3 for May, 1920 (the post war peak); and 64·4 for June, 1914. The advance in the index during the last half of the month was due in large part to higher prices for grains following reports of reduced crop prospects. Livestock prices in June were maintained at levels much higher than a year ago. In the grouping according to chief component materials, the Vegetable Products, Animal Products, Textile Products, Iron Products, and the Non-Metallic Minerals Products groups were higher while the Wood and Paper Products, the Non-Ferrous Metals Products and Chemical Products groups were slightly lower.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of June of seventy-two staple foodstuffs groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the Labour Gazette, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the Labour Gazette for February, 1910. The quantitites of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat

(*Continued on page 821.*)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

†December only. §Kind most sold.
††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent.

(Continued from page 819)

similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Meat prices for the most part continued the advance in progress since the beginning of the year. Sirloin steak averaged 28·3 cents per pound in June as compared with 26·9 in May and 23·3 cents in June, 1936. Rib roast averaged 21 cents in June, 19·7 cents in May and 17·7 cents in June last year. Fresh pork which has shown relatively little change during the last twelve months was ½ cent per pound higher than in May at an average price of 21·8 cents per pound. Breakfast bacon was fractionally higher than in the previous month at 28·8 cents per pound but was lower than in June, 1936. Fresh eggs were little changed in price averaging 25·2 cents per dozen. Creamery butter at 28·5 cents per pound averaged more than 2 cents per pound lower than in May. The price in June, 1936 was 25·2 cents per pound. Bread again advanced fractionally averaging 7·1 cents per pound. Onions advanced from an average price of 4·3 cents per pound in May to 5·9 cents in June. Potatoes were again lower at $1.53 per 90 pounds as compared with $1.70 in May. Seasonal reductions in

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended July 2, 1937; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 821)

the price of anthracite coal were reported from several cities and the price declined from $14.39 per ton in May to $14.11 in June. No changes were reported in rent.

Following are the prices reported for Welsh coal, "cobbles" and "French nut": Halifax, $15; Charlottetown, $12.90; Moncton, $15.50; Saint John, $14; Quebec, $13; Three Rivers, $15 and $14; Sherbrooke, $15 and $15.50; St. Hyacinthe, $14; Montreal, $13.50; Ottawa, $15.25; Kingston, $14.50; Belleville, $15; Peterborough, $15.75; Oshawa, $14.50; Toronto, $14 and $13.50; St. Catharines, $15; Hamilton, $14 and $13.50; Brantford, $16.25; Galt, $15.25; St. Thomas, $16; Sudbury, $16.75; Cobalt, $18; Timmins, $18; Port Arthur, $17.25; Fort William, $17.25; Winnipeg, $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of the cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries. The following notes afford information as to recent changes in prices according to groups of commodities in several of these countries.

Great Britain

WHOLESALE PRICES—The Board of Trade index number, on the base 1930=100, was 110·7 for May, an advance of 1·7 per cent for the month. The greatest advance was one of 11·1 per cent in the iron and steel group; the eggs, meat and fish group advanced 2·9 per cent; three other groups advanced only slightly. The non-ferrous metals group declined 4·9 per cent; the cereals group declined 2·5 per cent and the cotton group declined 2·2 per cent; the remaining three groups each declined less than one per cent.

The *Statist* index number on the base 1867-1877=100 was 105·7 at the end of May, an

increase of 1·3 per cent for the month. The May index number still falls short of the level of 106·9 which was reached in March this year. With the exception of March, however, it is the highest for any month since December, 1929. Decreases were recorded in vegetable foods and in sundries, while the remaining groups showed increases.

Cost of Living.—The Ministry of Labour's index number on the base July, 1914=100, was 152 at the beginning of June, showing no change from the figure for the previous month.

France

Wholesale Prices.—The General Statistical Office index number, on the base July, 1914=100, was 529 for May as compared with 533 for April, a decrease of 0·8 per cent for the month. The vegetable foods group declined 3·5 per cent, while the metals group increased 1·9 per cent, the changes in the other groups being of a minor nature.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913=100, was 105·9 for May, an increase of 0·1 per cent over the April index number which was 105·8 and an increase of 1·9 per cent over the figure for May, 1936. The agricultural products index increased 0·2 per cent during the month, while the raw materials and semi-manufactured goods index decreased 0·4 per cent and the manufactured goods index increased 0·3 per cent.

Cost of Living.—The official index number on the base 1913-1914=100 was 125·1 for May, which was the same as the index for the previous month. The rent group and the sundries group were unchanged; the food group increased 0·1 per cent, while the clothing group increased 0·2 per cent and the heat and light group declined 1·0 per cent.

India

Wholesale Prices.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 110 for March, an increase of 6·8 per cent for the month.

Cost of Living.—The official index number of the working class cost of living at Bombay, on the base 1914=100, was 104 for April, showing no change from the previous two months' level.

United States

Wholesale Prices.—The Bureau of Labour Statistics' index number, on the base 1926=100, was 88·0 for April, an advance of 0·2 per cent for the month. Higher index numbers were recorded for hides and leather products, textile products, fuel and lighting materials, metal and metal products, building materials, house furnishing goods, and miscellaneous products; farm products, foods, and chemicals and drugs declined. Compared with a year ago, substantial increases were shown for each of the ten commodity groups, with the exception of the fuel and lighting materials group, which was only 0·5 per cent higher than last year. Increases over last April for the remaining nine groups ranged from 6·4 per cent for the foods group to 19·9 per cent for the farm products group.

Dun's index number, based on the cost per capita of a year's supply of commodities was $204.981 at May 1, a decrease of 0·3 per cent for the month. The largest decrease was in the dairy and garden products group, which declined 8·5 per cent; the breadstuffs group increased 2·8 per cent. The remaining five groups were practically unchanged.

Dun and Bradstreet's index number (in continuation of Bradstreet's index number) which is based on the sum total of the prices per pound of 96 articles of common use, was $11·5159 at May 1, a decrease of 2·4 per cent for the month. The greatest decrease was in the metals group which declined 12·8 per cent; the miscellaneous group declined 6·1 per cent, while the live stock group declined 5·3 per cent. The coal and coke group increased 6·3 per cent. The changes in the remaining groups were slight.

Cost of Living.—The index number of the Industrial Conference Board on the base 1923=100, was 88·8 for May, an increase of 0·6 per cent for the month. All groups except the fuel and light group, which declined 1·5 per cent, showed increases. The food group and the housing group each advanced 1·1 per cent, the clothing group advanced 0·7 per cent and the sundry group advanced 0·2 per cent.

(*a*) Average for year. (*b*) First of month. (*c*) Middle of month until August, 1933; thereafter this index number is calculated fortnightly and the figure given in this table is for the date nearest to the middle of the month. (*d*) Cost of weekly family food budget. (*e*) Figure for previous month. (*f*) Figure for following month. (*g*) Quarter beginning in specified month. (*h*) Highest category workmen's household. (*i*) December.

VOLUME 37] AUGUST, 1937 [NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of July showed further improvement, according to the Dominion Bureau of Statistics, which tabulated returns from 10,271 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 1,134,318 workers, or 45,666 more than they employed at June 1. The index (based upon the average for the calendar year 1926 as 100), stood at 119·1, compared with 114·3 in the preceding month and 104·6 at July 1 of last year. At the same date in the fifteen preceding years, the index was as follows: 1935, 99·5; 1934, 101·0; 1933, 84·5; 1932, 88·7; 1931, 103·8; 1930, 118·9; 1929, 124·7; 1928, 117·7; 1927, 109·7; 1926, 105·0; 1925, 98·0; 1924, 97·1; 1923, 100·7; 1922, 92·2; and 1921, 88·6. The increase at July 1, 1937, was decidedly larger than that recorded at July 1, 1936, and was also substantially greater than the average gain between June and July in the experience of the last sixteen years.

Unemployment in Trade Unions.—At the beginning of July, 1937, reports were forwarded to the Department of Labour by 1,807 local trade unions, with a membership total of 198,262 persons. Of these, 20,522 or 10·4 per cent were without employment contrasted with 9·5 per cent at the beginning of June, 1937, and 13·9 per cent at the beginning of July, 1936.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada during June, 1937, showed a gain in the total placements effected, when compared both with the previous month and also with the corresponding month a year ago, construction and maintenance being mainly responsible for the gain under each comparison, although, in addition, substantial increases over May were recorded in farming, and over June, 1936, in logging, manufacturing and services. Vacancies in June, 1937, numbered 36,411, applications 56,903, and placements in regular and casual employment 33,794.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.24 at the beginning of July as compared with $17.20 for June, the slight increase being due mainly to the higher cost of foods. Comparative figures for certain earlier dates are $16.51 for July, 1936; $15.94 for July, 1935; $15.41 for June, 1933 (the low point in recent years); and $21.26 for July, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 continued to advance until the middle of the month and then declined during the last two weeks, influenced to a large extent by the movement in grain prices. The figures for the index number are 86·7 for the week ended July 30, 87·7 for that of July 17, and 86·2 for that of July 2. On a monthly basis the index number was 84·6 for June, 1937; 74·4 for July, 1936; 71·4 for July, 1935; 63·5 for February, 1933 (the low point in recent years; and 97·2 for July, 1929.

Business Statistics.—The most recent statistics available reflecting industrial conditions in Canada are given in the table on page 834. The index of the physical volume of business in June was at the highest point of the year, having more than recovered the loss of the preceding month. It was also 13 per cent higher than in June, 1936. Of the principal factors used in the construction of the index and after necessary adjustments for seasonal variation, mineral production, manufacturing, construction, electric power output, trade employment, and exports all showed advance in the month under review as compared with the previous month, while car loadings were again slightly lower. In mineral production, exports of copper, nickel and zinc continued at relatively high levels and showed considerable advance over the previous month, as did also the shipment

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended July 30, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue. (3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month. (5) Figures for four weeks ending July 31, 1937, and corresponding previous periods. (6) Sugar production given in periods of four weeks ending July 17, June 19 and May 22, 1937; July 11, June 13 and May 16, 1936. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Subject to revision.

of gold and the imports of bauxite. In the manufacturing group imports of raw textiles, forestry production, as well as the production of iron, steel and automobiles showed considerable advance. All of the principal factors mentioned above were higher in June, 1937, than in June, 1936. Information available for July shows advance in wholesale prices, employment, the number of cars of revenue freight loaded, and gross earnings of the Canadian National Railways both as compared with the previous month and with July, 1936. Contracts awarded were lower than in June, but higher than in July, 1936.

Strikes and Lockouts.—The number of strikes and lockouts recorded during July was 37, involving 6,411 workers and causing time loss of 69,276 man working days. The most important disputes were those involving gold miners, Wells, B.C., cotton factory workers, Cornwall, Ont., woollen textile factory workers, Peterborough, Ont., hat factory workers, Brockville, Ont., paper mill workers, Three Rivers, P.Q., and sawmill workers at Blind River and Thessalon, Ont. These disputes caused approximately 70 per cent of the time loss for the month. In June, 1937, there were on record 39 disputes, involving 7,461 workers, with time loss of 66,037 days. In July, 1936, there were 13 disputes, involving 4,082 workers and causing a time loss of 44,987 working days, the most important dispute being a strike of salmon fishermen at Rivers Inlet, B.C. Of the 37 disputes recorded for July, 28 were recorded as terminated, 10 resulting in favour of the workers involved, 8 in favour of the employers concerned, compromise settlements being reached in 8 cases, while the result of 2 disputes were recorded as indefinite. Ten disputes, involving approximately 2,580 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which has not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month of July two applications for the establishment of Boards of Conciliation and Investigation were received in the Department, one from clerks, checkers, elevator operators and freight handlers in the employ of the Canadian Pacific Railway at Digby, Nova Scotia, and another from certain employees of the Canadian Collieries (Dunmsuir) Limited, at Cumberland, British Columbia, and the Western Fuel Corporation.

Other proceedings under the Act during July included the establishment of a Board of Conciliation and Investigation by the Minister of Labour to deal with a dispute respecting wages and working conditions between the cities of Port Arthur and Fort William and their street railway employees. On July 20, the personnel of the Board of Conciliation and Investigation established to deal with five applications received from the employees of the City of Winnipeg, was completed by the appointment of the Honourable Mr. Justice A. K. Dysart of Winnipeg, Manitoba.

Further details regarding these proceedings under the Industrial Disputes Investigation Act will be found on page 839.

Minister of Labour outlines functions of Dominion Government in Industrial Disputes

Speaking in Toronto on July 14, the Hon. Norman McL. Rogers, Minister of Labour, outlined the functions of the Dominion Government in respect to industrial disputes as follows: "(1) to assist in the maintenance of law and order, and (2) to maintain an impartial attitude as between employers and employees and as between rival labour organizations, provided always that the parties to a dispute conduct themselves in a lawful manner." Referring to Government assistance in the maintenance of law and order, Hon. Mr. Rogers said: "The forces of law and order must not be used for the purposes of intimidation. At the same time, law-breakers must be punished whether they are employers or employees. There must be strict equality in the enforcement of the law."

The minister emphasized that machinery for the peaceful adjustment of disputes be maintained "in order to avoid the waste and bitterness which inevitably follow strikes and lockouts. The success of the machinery of Government conciliation depends on the impartiality and fairness of those who may be called upon to act as mediators."

Continuing, Hon. Mr. Rogers said that "the deep-seated causes of industrial unrest are to be found in the increasing insecurity of the wage-earning group under our high-speed industrial system. One of the major tasks which must be faced by democratic states is the reconciliation of free enterprise with social security. The task is difficult, but not beyond our powers.

"I do not suggest state responsibility should be substituted for individual responsibility in providing against sickness, old age and unemployment. I do suggest that the hard realities of the competitive system compel democratic governments to lessen the pressure of

economic insecurity on the masses of the people and establish a framework of unemployment insurance, health insurance, and old age pensions within which individuals will be encouraged and assisted to earn security against hazards of our economic life without suffering the loss of morale and independence which usually follows the habitual acceptance of public charity. Whether these various measures of social security are to be enacted on a national or a provisional basis is still undetermined. The method is of secondary importance so long as the objective is kept in clear view."

Concluding his address, the Minister said that "we have already in Canada some of the necessary elements of a system of social security in mothers' allowances, workmen's compensation and old age pensions. Our task is now to build upon this foundation and through federal and provincial legislation to reduce progressively the fears which lie at the root of social distress and industrial unrest."

Statistics of Home Improvement Plan

According to figures issued on July 31 by Hon. C. A. Dunning, Minister of Finance, loans under the Home Improvement Plan amounted to $6,843,098.95 at the end of June.

The figures show that of this amount, $4,848,548.10 was loaned in cities and towns with a population of 5,000 and upward, 12,189 of the 18,103 loans reported to June 30 being made in those places. At the end of May, loans in cities and towns of 5,000 or more numbered 9,388 and amounted to $3,678,427.10 (LABOUR GAZETTE, July, 1937, page 715). The number of loans contracted in June therefore, being, 2,801, amounting to $1,170,121.

In the larger cities, with populations of 40,000 and upward, 6,792 loans amounting to $2,668,511.17, were reported up to the end of June. In cities between 20,000 and 40,000 loans numbered 1,410 and amounted to $599,964.44. A total of 1,851 loans worth $766,840.76 was reported from cities and towns between 10,000 and 20,000; and towns ranging from 5,000 to 10,000 accounted for 2,136 loans with a value of $813,231.73.

There was little difference between Toronto and Montreal in the total amount loaned under the Home Improvement Plan, although Toronto far exceeded Montreal in the number of loans. Up to June 30, Montreal had reported 998 loans amounting to $507,701.19, while Toronto recorded 1,622 loans totalling $578,618.94. Vancouver recorded 740 loans amounting to $230,487.40, Winnipeg 687 loans, aggregating $256,255.28, Saint John 222 loans amounting to $101,044.27, Edmonton 377 loans, totalling $174,286.72, and Calgary 331 loans, amounting to $136,829.73.

Convention Call of Trades and Labour Congress

The convention call of the Trades and Labour Congress of Canada for its 53rd annual meeting to be held in Ottawa commencing on September 13, was issued recently by Mr. P. M. Draper, president, and Mr. R. J. Tallon, Secretary-Treasurer of the Congress.

Drawing attention to two major issues affecting labour—the declaring of social reform legislation passed by the Federal Parliament as "unconstitutional," and the question of the right of labour to organize—the "call" states in part:

"Since the convention of last year events of grave importance to the workers of Canada have taken place. The main body of the social reform legislation, as approved by the Parliament of Canada in 1935, has been declared unconstitutional. We are now faced with the alternative of dropping further action, seeking Provincial enactments, or securing such amendments to the British North America Act as will give the Dominion Parliament the power to pass needed social legislation. To halt our action toward legislative progress in social and labour matters is unthinkable, and contrary to the settled policies of the Congress over a number of years. To wait for Provincial legislation is to invite difficulty, delay and disappointment. To press with all possible vigour for amendments to the British North America Act is the way out. This year's efforts of the Congress, following our past policies, must necessarily strengthen our previous action toward this goal.

"Not for a generation has the question of the right of the workers to organize been so prominently paraded as a subject of popular discussion and as a field of public policy. This fact in part grows out of our convention of a year ago; in part from other causes. Last year we decided more definitely than before to press for positive legal protection to the workers to organize and our draft bill on the matter has been widely discussed. In fact, during this year the Legislatures in Nova Scotia, Alberta, Manitoba and Quebec have all taken some steps along the lines we have advocated. But the workers' right to organize has been assailed more than once in influential quarters, showing the need for more general legislative support than that secured up to now. For once and for all the labour movement must assert itself; it must have its right to freely organize recognized legally all over Canada. Work remains for the Congress

to do in this field—work of very great importance in view of current events."

Concluding this section of the convention notice it was emphasized that "the labour movement in this period of swift changes should at all times be prepared to give a lead toward the establishment of a more just and equitable social order."

Dominion-Provincial Conference on Municipal Statistics

A Dominion-Provincial Conference on Municipal Statistics was held at Ottawa from July 19 to 22, there being in attendance representatives of the Dominion Bureau of Statistics and of the provincial government departments in charge of municipal affairs, with additional representation from some of the cities and organizations of municipalities and municipal officials, as well as officials from several of the federal government departments and offices, including Mr. Tom Moore, Vice-Chairman of the National Employment Commission, Mr. J. K. Houston of the Unemployment Relief Branch of the Department of Labour, and Mr. C. W. Bolton, Statistician of the Department of Labour. Dr. R. H. Coats, Dominion Statistician, was chairman of the conference, and Colonel J. R. Munro, Chief of the Financial Statistics Branch of the Dominion Bureau of Statistics, was secretary.

The object of the conference was to bring about uniformity in municipal accounting for the various classes of municipalities; to arrange for the compilation of statistics of municipal revenues, expenditures, etc., on a uniform basis for all classes of items with the avoidance of duplication.

Standardization of the financial statistics of provincial government was arranged for soon after the establishment of the Bureau of Statistics in 1918 and a tentative plan for municipal statistics was drawn up and used for the statistics of the cities, and later towns and villages. The conference proceeded to draw up plans for a comprehensive system for all municipalities and local administrative units, including school boards, public utility commissions, etc.

The committee on unemployment relief expenditure recommended that each municipality should keep separate records of the cost of direct relief, grants-in-laid and cost of administration, debentures issued for relief, interest on such loans, and provision for their retirement, also that statistics of other social services should be kept separately, including not only education, hospitals, etc., but old age pensions, mothers' allowances, child welfare, relief of ordinary indigence, etc.

Supply and Demand in the Professions

Nearly three per cent of the young people growing up in Canada to-day become graduates of a university—about four per cent of the young men and one-and-one-half per cent of the young women, according to a bulletin prepared by the Dominion Bureau of Statistics. The proportion receiving a degree in Arts or Science is nearly double what it was fifteen years ago, but in several of the professions the increases have not kept pace with the increase in population, and in a few the annual number of graduates has definitely fallen. The population is larger per doctor or clergyman now that it was a generation ago, and is nearly double in some provinces what it is in others; the number of veterinaries has actually fallen while livestock has become much more numerous.

Some of the most rapid increases in professional workers have been in the several branches of engineering. Native-born Canadians have met little more than half of the demand for mining, mechanical or electrical engineers, designers, draughtsmen and architects, and only about two-thirds of the demand for civil engineers, surveyors, chemists, assayers, and metallurgists. Much the greatest outside source of supply has been the British Isles, while the United States has supplied larger numbers than the continent of Europe. In spite of greater liability to unemployment than most other salaried professionals, the earnings of engineers and other applied science workers are higher than for the average professional, whose salary in turn is more than double that of a non-professional worker.

The continent of Europe has contributed its greatest proportions to Canadian professionals among clergymen, artists and musicians, and only in these fields has its contribution exceeded that of the United States. Yet by racial origins music and art are two of the most "English" of the professions in Canada, and theology one of the most "French." Journalism is one of the most "British," in the sense that persons of English, Irish and Scottish origins all occupy a considerably greater share of positions in journalism than in other occupations. Considering all the professions together, persons born in the British Isles occupy more than their share of positions, i.e. considerably higher percentages of the total than in other occupations, while the opposite holds for immigrants from Europe.

This bulletin may be had on application to the Dominion Bureau of Statistics at 25 cents per copy.

Old Age Pensions in South Africa

An Act to amend the South African Old Age Pensions Act of 1928 (LABOUR GAZETTE, 1928, pages 3, 589, 941) was brought into force on April 1 of this year.

The new Act provides that women shall in future be entitled to pensions on reaching the age of 60. Under the old regulations the pensionable age was fixed in all cases at 65.

The amount of the pension will continue to be fixed by a Government Commissioner in each case according to the circumstances of the applicant. Hitherto the pension did not exceed £30 a year for white persons and £18 a year for coloured persons. Under the new Act these rates may be raised to £42 and £22 respectively.

The pension, plus the other income or resources of the pensioner, might not, under the old regulations, exceed £54 a year for whites and £36 a year for coloured persons. These rates are in future fixed at £72 and £39 respectively. So far as white pensioners are concerned account will also be taken of their dependent children. Thus the rate of £72 is increased by £12 a year in respect of each child under 16 whom the pensioner maintains.

Fair Labour Standards Act to fix hours and wages in U.S.A.

In the June issue of the LABOUR GAZETTE at page 599 reference was made to the introduction of the Black-Connery Labour Standards Bill in the United States Congress. The bill "to provide for the establishment of fair labour standards in employments in and affecting interstate commerce and for other purposes," was referred to the Senate Committee on Education and Labour, and the House Committee on Labour.

On July 8, the Committee on Education and Labour of the United States Senate favourably reported a substitute for the first bill. The Senate Committee has considerably simplified the proposals put forward in the original bill. The original bill would have permitted a Labor Standards Board to establish minimum wages and maximum hours in various industries with very wide discretionery powers to determine what these should be. The revised bill would empower the Board to establish, for occupations subject to the measure, minimum wages determined on the basis of standards outlined in the bill, but no minimum wage prescribed by the Board could be in excess of 40 cents per hour. The bill would further empower the Board to prescribe a maximum work-week varying the maximum by occupations etc., but no work-week established by the Board could be less than 40 hours. In other words, the Board will have authority to establish maximum wages up to 40 cents per hour, and a maximum work-week down to 40 hours per week. Its object is thus to create a national standard of minimum performance and to leave outside the field of federal regulation any improvements on this standard.

In addition to classes of employees exempted from the original bill, the revised bill expressly exempts persons employed in a "local retailing capacity," seamen, railroad employees subject to the provisions of the federal Hours of Service Act, fishermen and all persons employed in agriculture. The term "agriculture" is broadly defined to include farming in all its branches, forestry, horticulture, raising of livestock and other related undertakings

The restrictions and penalties imposed by the bill on the movement of interstate commerce of goods produced under sub-standard labour conditions do not apply to imported goods, however, the revised bill enables the federal Tariff Commission to investigate differences in cost of production between domestic articles and similar foreign articles resulting from the operation of the statute, with the view to determining whether there should be increased duties for the purpose of equalizing such differences.

The revised bill also proscribes the employment of children under 16 years of age, and of those between the ages of 16 and 18 in an occupation which in the opinion of the Chief of the Children's Bureau, is particularly hazardous or detrimental to their health or well-being. The Chief of the Children's Bureau could, however, permit employment of persons under the age of 16 to the extent that such employment is confined to periods that would not interfere with their schooling and to conditions which would not interfere with their health and well-being.

The Board would be empowered to issue orders permitting wages lower than the minimum to learners and apprentices under certain conditions, and to persons whose earning capacity was impaired by age or physical or mental deficiency.

Survey of World Unemployment Situation

According to quarterly statistics published by the International Labour Office, the regular decrease in unemployment throughout the world during the last four years, has continued in the second quarter of 1937.

In practically every country recorded unemployment has diminished as compared with the corresponding period of 1936, the

only exceptions being Denmark, Estonia, Finland, Latvia and Yugoslavia where the figures show a slight increase.

The statistics of persons at work confirm this favourable impression, as, in all countries without exception for which such figures are available, the number of workers employed has increased. It is noted, however, that the number of workers employed in industry is still below what it was in 1929 in Belgium, Canada, Czechoslovakia, France, Italy, Luxemburg, the Netherlands, Poland, Switzerland and the United States.

The International Labour Office in presenting these statistics of employment and unemployment emphasizes the limitations of such figures, and states that they do not afford any comparison of levels of unemployment or employment in the various countries, as methods applied in compiling these statistics differ from one country to another, and the figures only serve as an indication of the trend of employment and unemployment in the countries concerned.

Statistics based on unemployment insurance schemes indicate declines in unemployment ranging from 6·8 in Switzerland to 1·9 in the United Kingdom. Other declines over the corresponding period of 1936 were Czechoslovakia, 4·3; Belgium, 3·3; Austria, 2·4; while Denmark showed an increase in unemployment of 1·6.

Unemployment statistics obtained from returns made by trade unions indicate declines in unemployment ranging from 4·4 in the United States and 4·0 in Canada to 1·4 in Norway. Other decreases were 3·0 in Sweden and 3·5 in Australia.

Statistics based on social insurance schemes show improvement in indices of employment ranging from 11·1 in Yugoslavia to 3·1 in Hungary over the corresponding period in 1936. Other increases in employment indices were Belgium 5·3; Czechoslovakia, 7·9; Great Britain, 4·8; Latvia 8·4 and the Netherlands, 4·7.

Returns from selected establishments also reflect the widespread improvement in the world employment situation. Again, as in the previous quarter, in all countries reporting the indices of employment advanced, the advance ranging from 17·4 in Estonia and 12·5 in the United States to 3·9 in France. The index of employment based on returns from selected establishments in Canada showed an improvement of 5·7 over the corresponding period of 1936. The improvement in other countries was registered as follows: Denmark, 6·6; Finland, 5·9; Italy, 6·9; Japan, 8·3; Luxemburg, 6·1; Norway, 7·0; Poland, 10·1; South Africa, 8·8; Sweden, 7·3; and Switzerland, 6·7.

Note.—*More recent and detailed statistics dealing with the employment situation in Canada are given in the article (four sections) entitled "Employment and Unemployment in Canada in June, 1937" to be found elsewhere in this issue.*

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING JULY, 1937

DURING the month of July two applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour as follows:—

1. From clerks, checkers, elevator operators and freight handlers in the employ of the Canadian Pacific Railway Company at Digby, Nova Scotia, being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute relates to the request of the employees, 46 in number, for inclusion in the agreement covering similar employees at Reed's Point Wharf and for the adjustment of inequalities in rates of pay.

2. From certain employees of the Canadian Collieries, (Dunsmuir), Limited, at Cumberland, B.C., and the Western Fuel Corporation, Limited, at Nanaimo, B.C., being members of the United Mine Workers of America. Approximately 1,800 men are stated to be directly affected by the dispute, which grew out of the employees' request for union recognition, increased wages and certain alterations in existing conditions of work. A Board of Conciliation and Investigation was established by the Minister of Labour on July 20, the personnel of which is as follows: Mr. Leonard W. Brockington, K.C., of Winnipeg, Manitoba, chairman, appointed by the Minister on the joint recommendation of the other Board members; Mr. George Kidd, of Vancouver, B.C., nominated by the employers; and Mr. Angus J. Morrison, of Calgary, Alberta, nominated by the employees.

Board Established

A Board of Conciliation and Investigation was established by the Minister of Labour during July to deal with a dispute respecting wages and working conditions between the cities of Port Arthur and Fort William, on the

one hand, and their street railway employees, on the other hand, being members of Division No. 966, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America. The Board is composed as follows: Mr. Robert Jacob, K.C., of Winnipeg, Manitoba, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. Arthur H. Dowler, K.C., of Fort William, Ontario, nominated by the civic authorities of Port Arthur and Fort William; and Mr. Samuel Ashton, of Port Arthur, Ontario, nominated by the employees.

Chairman Appointed

The personnel of the Board of Conciliation and Investigation established to deal with five applications received from employees of the Corporation of the City of Winnipeg (LABOUR GAZETTE, July, 1937, page 719) was completed on July 20 by the appointment of the Honourable Mr. Justice A. K. Dysart, of Winnipeg, Manitoba, as third member and chairman. This appointment was made by the Minister of Labour on the joint recommendation of the other Board members, Messrs. Travers Sweatman, K.C., and Marcus Hyman, K.C., both of Winnipeg, nominees of the city and employees, respectively. The various groups of employees affected by this dispute are: (1) waterworks supply workers, members of the Waterworks Operators' Union; (2) linemen, cablemen, pitmen, groundsmen, etc., members of the Linemen and Underground Mechanical Employees' Unit (Civic Employees), One Big Union; (3) high pressure pumpmen, pump house employees, electricians, maintenance men, etc., members of the Electrical and Mechanical Workers' Unit, Federation of Civic Employees; (4) clerical employees and meter readers of the hydro electric and waterworks systems, members of the Clerical Branch of the Federation of Civic Employees; and (5) diggers, air compressor men and joint-makers, members of the Waterworks (Diggers) Civic Employees' Unit, One Big Union.

Settlement Effected

An agreement respecting wages and working conditions was reached towards the end of July between the Canadian Marconi Company and its coast station telegraphers, ships' telegraphers and trans-oceanic telegraphers, members of Canadian Marconi System Division No. 59, Commercial Telegraphers Union. While the agreement is based on the unanimous recommendations of the Board of Conciliation and Investigation which earlier in the year had dealt with a dispute on the subject (LABOUR GAZETTE, June, 1937, page 601), the Board's proposals were amended in certain respects.

International Survey on Legal Decisions on Labour Law

The International Labour Office has just published the eleventh issue of the "International Survey on Legal Decisions on Labour Law," containing judgments delivered in 1935-1936.

As in previous years, the "Survey" contains a selection of decisions on cases in England, France, Germany, Italy and the United States, with a subject index and an introductory note on the competent authorities having jurisdiction in labour matters in these countries.

The cases chosen are arranged under the following headings: International Labour Law; General Principles of Labour Law; Occupational Organization; Organization of Industrial Undertakings; Conditions of Employment and Protection of the Individual Worker; and Social Welfare and Insurance. Particular interest attached to the effects of the French Legislative Decrees of 1935 on labour legislation and to the decisions of the United States Supreme Court in regard to the constitutionality of legislation.

The *Royal Gazette* of Nova Scotia dated August 4, 1937, contains a notice of the appointment of the Hon. William F. Carroll of Halifax, Judge of the Supreme Court of Nova Scotia; A. Stanley MacKenzie Ph. D., F.R.S.C. of Halifax, Chairman of the Nova Scotia Economic Council, and Frederick H. Sexton, L.C.D., of Halifax Principal of the Nova Scotia Technical College; as commissioners "to enquire fully into and concerning the following public matters, that is to say, to investigate and consider the financial position and affairs of the Acadia Coal Company Limited a corporation under the Laws of the Province of Nova Scotia, lessee from the said province of certain coal areas in the county of Pictou; the question of wages it pays or should pay its employees; the scope of the mining operations which it carries on or should carry on, under its leases; to that extent, if any, any other coal lessee or operator in the Province is interested in the property of this Corporation; what if any, changes in operations should be made by the Acadia Coal Company Limited in the interests of the Province and more particularly of the County of Pictou...

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Decisions

REPORTS have been received of four cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the Labour Gazette, May, 1937, page 500 and in previous issues.

The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925 (the date of the inception of the Board), to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made, in the agreement constituting the Board, for the appointment of an arbitration in any case in which the Board might be unable to agree upon an award.

Case No. 175.—Operating Department (Atlantic Region)

This case concerned a dispute arising from the abolition of a lampman's position at Rivière du Loup, P.Q., and the assignment of the lampman's duties to sectionmen. Prior to April 30, 1935, the switch lamps at Rivière du Loup were attended to by a lampman at 42 cents per hour. At that time the lampman was discharged for cause and since then the work has been attended to by sectionmen.

Employees' Contention.—In setting forth their contention the employees showed that effective April 30, 1935, the duties of lampman were assigned to a sectionman and that this employee being covered by another Wage Agreement, held no seniority rights to lampman's work. Immediately it was found that a sectionman had been assigned to the lampman's duties, a grievance was submitted on behalf of the employees and the suggestion made that the work be assigned to another employee holding seniority rights under the Schedule for Clerks and Other Classes of Employees. This suggestion was not entertained by the Management and the sectionman continued to perform the lampman's duties.

Subsequent to the employees' protest the lampman's duties were split up among four sectionmen instead of confining these duties to one sectionman, as was the practice in the first instance. The employees contended that this latter change was made by the Management and the work split up among several sectionmen in an effort to justify their contention that there is not sufficient lampman's work at Rivière du Loup to warrant the retention of a lampman at full time.

The employees claimed that as this work is covered by the Schedule for Clerks, etc., it should be performed by employees holding seniority rights under that Schedule. They further contended that it was a violation of their schedule to assign the duties of lampman to sectionmen who are covered by another wage agreement and who hold no seniority rights to lampman's work.

The employees therefore, requested that this work be taken from the sectionmen and assigned to an employee holding seniority rights to the position under the Schedule for Clerks and other Classes of Employees.

Railways' Contention.—The railway claimed that while the classification of lampman is covered by the Clerks and Other Classes of Employees' Schedule, there are only a few points in the Atlantic Region where there is sufficient work to warrant the employment of lampmen, the work at other points being looked after by sectionman or telegraphers, Clause (*a*) of Section 10 of the Maintenance of Way Employees' Schedule providing for the performance of these duties by these classes of employees. The Railway pointed out that provision is also made in the Telegraphers' Schedule for these employees to attend switch lamps. It was also stated that it is the general practice for Maintenance of Way Employees to perform the work within

their recognized hours of duty and without additional compensation, and that this practice had been followed at Rivière du Loup since the lampman had been discharged for cause, the time per day occupied being from three to four hours. The Railway claimed that if a lampman is employed he would be idle the balance of the time and it was for this reason that the position was not re-established.

General Statement.—This case was heard on March 17, 1936, and was referred back to the parties for further information, and possible settlement. No agreement could be reached by the parties, and the Board found that the circumstances did not warrant the re-establishment of the position of lampman at Rivière du Loup. The claim of the employees was therefore denied.

Case No. 177.—Operating Department (Atlantic Region)

This case concerned the claim of a freight checker for the position of freight shed foreman at Truro, N.S. The freight checker claimed that he was the senior qualified applicant but was denied the position, a correspondence clerk being awarded the position.

Employees' Contention.— The employees stated that on November 3, 1935, the position of freight shed foreman at Truro, N.S., was bulletined. Several employees made application for the position, among them being (in order of seniority) a freight checker, a stower, and a correspondence clerk. The position was awarded to the stower, who within a few days admitted his incompetency and retired from the position and returned to his former duties as stower at Halifax. The position was then awarded to the correspondence clerk. The employees protested both of these appointments, submitting a grievance on behalf of the freight checker, the senior employee who had filed application for the position, but was denied the right of promotion to the same on the grounds that he was deaf and not qualified. The employees pointed out that the freight checker in question had occupied the position of night shed foreman at Truro from January 8, 1917, to May 11, 1924, the position of night foreman subsequently being abolished the employee concerned reverted to the position of freight checker. The employees claimed that the freight checker, as the senior qualified applicant should be awarded the position.

Railway's Contention.—The Railway stated that the freight checker was not awarded the position as he was not qualified.

General Statement.—This case was heard on March 17, 1926, at which time additional oral evidence was submitted by the parties to the dispute in support of their respective contentions. The case was referred back to the parties for possible settlement. Later, the employees' representative made a claim for the position on behalf of another party not mentioned in the original submission, and the case was again referred back to the disputants without any settlement having been reached. The claim of the employees was denied by the Board.

Case No. 178.—Operating Department (Western Region)

This case concerned a protest regarding the seniority status of a labourer at Brandon, Manitoba. In a joint statement of facts it was stated that the employee concerned was carried on the Portage-Brandon seniority list of Shop Labourers and Stationary Firemen, with seniority as from May 10, 1921. This date was protested, the employees claiming seniority should date from March 15, 1929.

Employees' Contention.— The employees claimed that the record of the employee concerned shows that he did not establish seniority in the shop labourers group when he started as a wiper on May 10, 1921, on account of the fact that he did not complete six months' continuous service. His record shows, however, that he did establish seniority as from December 19, 1921, but this seniority was subsequently lost on account of having worked for over six months as a Locomotive Fireman and Hostler. His record now shows that he should only be credited with seniority as from March 15, 1929, he having worked as a hostler at Kipling from October 3, 1927, to April 3, 1928, and from September 16, 1928, to March 15, 1929.

This case was referred to the Superintendent of Motive Power and Car Equipment, and he agreed that the employee was only entitled to seniority as from March 15, 1929, and on February 27, 1935, he advised the Locomotive Foreman at Brandon accordingly. After the seniority date was changed someone appealed to the General Superintendent, with the result that instructions were issued that the employee was to be placed back on the seniority list with May 10, 1921, as his date.

On June 4, 1935, the whole question was placed before the General Superintendent, who stated that he was of the opinion that the labourer's seniority should not be disturbed. On appeal to the Vice-President against the ruling of the General Superintendent, the

employees were advised that the management was not prepared to change the labourer's seniority date.

Railway's Contention.—The Railway stated that the employee, whose seniority was in question, had been employed continuously from December 13, 1911, to the present. It was also pointed out that he was listed on the seniority list of engine labourers and stationary firemen on the Portage-Brandon, as a classified labourer with the seniority date of May 10, 1921, which he had held since the lists were prepared. The Railway also cited other reasons in support of its opinion that the employee's seniority date should not be disturbed.

General Statement.—This case was heard on November 17, 1936, and was referred back to the disputants for further particulars. The Board reported that it had been advised that a settlement had been reached by the parties to the dispute and their request to withdraw this case from the Board was acceded to.

Case No. 188.—Sleeping, Dining and Parlour Car Department and Certain Cafe Car Employees, Montreal District

This dispute concerned the claim of cafe car employees, in buffet service, trains 11 and 12, Quebec-Taschereau, for pay at cafe car employees' rates for the round trip when the crew is augmented between Hervey Jct. and Taschereau.

According to the joint statement of facts, "between November 30, 1936, and January 9, 1937, and subsequently, certain steward-waiters and buffet-cooks made several trips between Quebec and Taschereau on cafe coach in buffet service when the crew was augmented by the assignment of additional employees to the car between Hervey Junction and Taschereau.

"On each occasion that the crew was augmented the steward-waiters claimed pay at cafe car stewards' rate, and the buffet-cooks claimed pay at cafe car chefs' rate, for the round trip between Quebec and Taschereau, including their home terminal layover. These employees were paid the higher rates of pay for the portion of the trip between Hervey Junction and Taschereau only, including their home terminal layover at Quebec."

Employees' Contention.—In view of the provisions of Article 7, Rule (*a*) of the "Sleeping and Dining Car Employees' Schedule" which states that "employees temporarily assigned to higher rated positions shall receive the higher rates while occupying such positions," the employees contended that "the claimants in this case were entitled to pay at cafe car stewards' rate and cafe car chefs' rate respectively for the round trip, Quebec-Taschereau, including their layover."

Railway's Contention.—The Railway contended that it had "complied with the Employees' Schedule in this matter as covered in Article 7, Clause "A" as they have paid these employees the higher rates while occupying a higher rated position in accordance with this clause."

General Statement.—Both parties appeared before the Board and gave additional oral evidence in support of their respective contentions. The decision of the Board sustained the claim of the employees.

Automobile Statistics for Canada, 1936

According to a report entitled "Automobile Statistics for Canada, 1936," issued recently by the Dominion Bureau of Statistics, final figures for 1936 show that automobile production in Canada totalled 162,159 units valued at $95,955,204 at factory prices, compared with 172,877 cars at $99,013,047 in 1935. The decline from 1935 was about 6 per cent in the number of units and 3 per cent in value. The 1936 statistics included 128,369 passenger cars worth $76,814,258 and 33,790 trucks valued at $19,140,946. About 67 per cent of the output, or 108,593 units, were made for sale in Canada and 33 per cent or 53,566 units, were made for export. When repair parts, accessories and other products made in automobile factories are included, the output of this industry amounted to $105,350,035 in 1936, compared with $106,624,445 during 1935.

The average number of employees in automobile factories in 1936 was 12,933 compared with 13,095 in 1935, and 9,674 in 1934. Salaried workers numbered 1,982 and salaries totalled $4,080,484. Wage-earners numbered 10,951 and their earnings aggregated $14,083,558 for the year.

The report also states that eleven companies manufactured or assembled motor cars in Canada during 1936 and 16 separate factories were in operation; four assembly plants were closed down late in 1935 and did not operate during the year under review. Eleven of the active establishments were in Ontario, 2 in Quebec, 2 in British Columbia and 1 in Manitoba. It is estimated that the industry operated at about 58 per cent of capacity during 1936 as compared with 65 per cent in 1935, 44 per cent in 1934 and 66 per cent in 1929.

REPORT OF PROVINCIAL COMMISSIONER ON THE STRIKE OF FUR WORKERS IN WINNIPEG, AUGUST 11, 1936

BY Order in Council of November 13, 1936, the Government of Manitoba appointed Mr. Robert Jacob, K.C., to inquire into the dispute between Local No. 91 of the International Fur Workers of the United States and Canada and certain fur manufacturers and repairers which resulted in a strike on August 11, 1936. (LABOUR GAZETTE, December, 1936, p. 1116.) The strike involved 300 workers and 33 employers who had refused to negotiate with union representatives as to an agreement providing for closed union shop, the 40 hour week, time and one-half rates for overtime, a union wage scale with a minimum of $12 per week, the control of apprenticeship, six public and religious holidays per year with full pay and May 1st without pay (LABOUR GAZETTE, September, 1936, page 775 and subsequent issues). After the strike began twenty-four employers, having 117 workers, signed the agreement with the union by November but seven of the larger establishments continued to refuse to negotiate with the union and the dispute was not settled when the commissioner reported on May 21, 1937. The strike resulted in disturbances in connection with picketing, assault, intimidation, etc., numbers being arrested and convicted, several being fined or sentenced to imprisonment.

In April, 1937, the seven employers against whom the union was still on strike entered into agreements with a new and independent union, the Manitoba Fur Employees' Association.

The Commissioner held 34 sessions and examined 51 witnesses. A questionnaire as to wages, hours, numbers of employees who participated in the strike, etc. was sent to each of the fifty employers in the industry in Winnipeg, including those not involved in the dispute. The Commissioner visited several of the furriers' establishments and stated that generally the working conditions in the plants were good, and that in some of the larger plants, from the standpoint of the health and comfort of the employees, the conditions were very good.

The Commissioner reported that early in 1935 workers in the fur trade expressed to the Trades and Labour Council of Winnipeg their desire to have a union, and as a result of several meetings a charter was secured from the international union above mentioned and a union organizer from Toronto came to Winnipeg in October. The Furriers' Guild was requested to meet union representatives but refused, and the Deputy Minister of Labour for Manitoba, at the request of the union and the Trades and Labour Council, attempted to bring about negotiations but was unsuccessful. The employers stated that they objected to provocative and exaggerated statements as to working conditions put out by the union. A strike was considered but it was decided to carry on organization until the next busy season, about May 1, 1936. The First Vice-President of the international union, from New York, arrived in Winnipeg on July 19, 1936. Requests for negotiations with the employers being ignored, the assistance of the Mayor of Winnipeg was requested. The latter met members of the Furriers' Guild but efforts to bring about negotiations were not successful. The employers stated that most of their employees did not belong to the union and did not want a union agreement. At a mass meeting of fur workers on August 4, reported to be attended by 300, a vote to call a strike was carried. Union representatives claimed that at this time several of the employers laid off numbers of union employees although it was the busiest period of the season. The employers stated that those laid off were instructed to return in a few days.

The Commissioner found that since the general strike in the industry in 1926 no dispute occurred until 1936, except one strike involving one firm in 1933, and minor cases affecting individuals.

It was ascertained that at the beginning of the strike there were 89 paid up members of the union and 16 not paid up but the Commissioner was unable to determine how many of the 415 workers in the industry were in favour of a union agreement. Several of the employers had taken votes of their employees and, although large percentages of these voted as being against a union agreement, the union claimed that when the strike began most of them ceased work and joined the union. The seven employers who refused to sign the union agreement stated that the union did not represent their employees, and that the latter were satisfied with conditions.

On the question as to coercion and intimidation by employers and by union representatives or others, the Commissioner found that certain employees, laid off before the strike, believed that it was for union activity. The employers, however, denied this and also that any had been threatened with dismissal if they joined the union, but admitted they

had stated that the positions of those who struck would be filled by other workers. Little evidence as to intimidation or coercion by the union prior to the strike was given apart from urging workers to join the union. One man was attacked and seriously injured by three men but the perpetrators were not apprehended. A great deal of evidence was submitted as to intimidation and violence on the part of strikers and their sympathizers during the strike but it was stated that most of these had been dealt with by the Courts.

On the question as to the general condition of the fur trade in Winnipeg the Commissioner reported that the busy season was from May 1 to December 31 but in the wholesale establishments it was two months longer, and that in the slack period work was distributed among all employees as much as possible; that hours of work were 40 per week in the union shops and in the larger establishments, but 44 per week in the others; that a great deal of overtime was worked in the busy season, in some shops at straight time and in others at time and one-half rates. The employers claimed that it was not practicable to engage extra workers at such times as there was not accommodation in the shops, new employees would not be familiar with the work and methods in use, also that the regular employees wished to work extra to make up for loss of earnings in slack periods. Wages were found to be slightly lower than in eastern Canada but it was reported that the season was shorter there and the workers were more skilled as the industry had been longer established. Little evidence of violation of the minimum wage law was presented and from a study of the reports of investigations by the inspectors of the Bureau of Labour the Commissioner was satisfied that the law was generally observed; that there had been no serious infractions; and the Bureau of Labour had dealt promptly with all of those brought to its notice.

Fisheries of Canada in 1936

In an advance report on the fisheries of Canada for the year 1936 issued by the Dominion Bureau of Statistics, in co-operation with the Department of Fisheries the most successful year experienced by the Canadian fisheries since 1930 is reported.

The total value of production in 1936 was $39,164,618, this total representing the value of the fish as marketed, whether sold for consumption fresh, or as canned, smoked, dried, etc. The value shows an increase over the preceding year of $4,763,764, or 14 per cent, and an increase over 1932, the low year of the depression period, of $13,207,509 or 51 per cent. To the total value for 1936, the sea fisheries contributed $32,951,067 or 84 per cent and the inland fisheries, $6,213,551, or 16 per cent.

In the primary operations of catching and landing the fish the value of the capital investment, as represented by the vessels, boats, nets, traps, piers and wharves, freezers, etc., was $27,218,025, of which $22,544,456 is credited to the sea fisheries and $4,673,569 to the fisheries of the inland waters. The total value shows an increase over the preceding year of $744,943.

The number of fishermen employed during 1936 totalled 71,735; those engaged in the sea fisheries numbering 58,371, and in the inland fisheries 13,364. There were 3,178 more fishermen employed in 1936 than in 1935, the number engaged in the sea fisheries showing an increase of 1,538 and in the inland fisheries an increase of 1,640.

The value of the capital investment in the manufacturing branch (fish canning and curing establishments) of the fisheries industry in 1936 is placed at $18,476,823, an increase over the preceding year of $1,332,017, due chiefly to the salmon canneries, which although fewer in number than in 1935, had a much larger output, and consequently a greater capital investment.

These manufacturing establishments of Canada's fisheries furnished employment during 1936 to 15,110 persons, compared with 14,361 persons in the preceding year. These figures, the report states, indicate the total number of persons given employment during any part of the year, although in some cases the period of employment might not exceed two months due to the seasonal character of the work involved as for example, in the lobster canneries which operate chiefly during the months of May and June, and the salmon canneries during the months of May, June, July and August. On the other hand, fish curing establishments are in operation for practically the entire year.

The Saskatchewan Gazette of June 30 contains the standard bylaws governing all savings and credit unions incorporated under the Credit Union Act, 1937. The regulations deal with practically every activity in connection with the operation of credit unions.

Amended regulations governing the erection, operation and public safety of theatres, entertainment halls and motion picture theatres are detailed in the *Alberta Gazette* of June 30.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1937

THE following table shows the number of disputes, workers involved, and time loss for July, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man-working days
*July, 1937	37	6,411	69,276
*June, 1937	39	7,461	66,037
July, 1936	13	4,082	44,987

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for July was approximately the same as in June with comparatively little change in the numbers of workers involved and in time loss incurred. The most important disputes were those involving cotton factory workers at Cornwall, Ont., paper mill workers at Three Rivers, P.Q., and sawmill workers at Blind River, Ont., which began in July, as well as the strikes of gold miners at Wells, B.C., woollen textile factory workers at Peterborough, Ont., tannery workers, Toronto, Ont., and hat factory workers, Brockville, Ont., which were carried over from June. In June there was also an important strike of coal miners at Stellarton, N.S., and a strike of men's clothing factory workers at Sorel, P.Q., which was terminated by the middle of July. In July, 1936, a strike of salmon fishermen at Rivers Inlet, B.C., caused considerable time loss and there was also an important strike of men's clothing factory workers at Winnipeg, Man.

Eight disputes, involving 1,697 workers, were carried over from June, and twenty-nine disputes commenced during July. Of these thirty-seven disputes, twenty-eight terminated during the month, ten being in favour of the workers involved, eight in favour of the employers concerned, while compromise settlements were reached in eight cases and the results of two disputes were recorded as indefinite. At the end of July, therefore, there were nine disputes recorded as strikes or lockouts, namely: sawmill workers, Foleyet and Tionaga, Ont., rubber factory workers, Toronto, Ont., custom tailors, Toronto, Ont., hat factory workers, Brockville, Ont., woollen textile factory workers, Peterborough, Ont., cotton factory workers, Cornwall, Ont., lime plant workers, Blubber Bay, B.C., restaurant employees, Regina, Sask., and waitresses, Vancouver, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received, indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; fur factory workers, Winnipeg, Man., August 11, 1936, seven employers; glass factory workers at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; and tannery workers, Toronto, Ont., June 1, 1937, one employer, the last being added to the list this month.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A strike of 180 loggers in one camp at Cowichan Lake, B.C., for one day on June 11 was reported too late for inclusion in the July issue of the LABOUR GAZETTE. A number of employees ceased work in protest against the dismissal of one worker, alleged to be for union activity. Work was resumed next day and the strikers were soon replaced.

Cessations of work in seven fur shops in Toronto in June have recently been reported, involving forty-two employees to secure increases in wages and renewals of enforcement of agreements. All were reported to have terminated successfully in a short time except in one shop where the strike is reported to be still in progress.

A minor dispute involved eleven painters at Ottawa, Ont., on July 22 for three hours,

the men demanding a higher rate of pay for hazardous work. Work was resumed without securing any concessions.

A minor dispute involved a small number of bakers in one establishment at Vancouver on July 16, to secure a renewal of the agreement. Work was resumed when it was agreed to refer the points in dispute to arbitration.

A cessation of work by fourteen coal miners at Glace Bay, N.S., on July 3 occurred owing to a misunderstanding and work was resumed on the next shift.

A dispute involving part of the employees in one colliery at Glace Bay on July 21 has been reported but particulars have not been received.

A one day strike of four hundred miners at Caledonia, N.S., on July 31 in protest against the transfer of two men from another colliery has been reported but particulars as to the result have not been received.

A dispute involving highway construction labourers near Kenora, Ont., on July 28 has been reported but particulars as to the number affected and the cause have not been received.

A cessation of work by salmon fishermen in the Rivers Inlet area in British Columbia early in July was reported in the press. Reports secured by the Department indicate that through negotiations the fishermen secured a higher rate for the fish owing to the small size of those caught. The stoppage was only over Sunday as is usual.

Disputes by Industries

The following is a review of disputes by industries in which strikes and lockouts occurred during the month, giving particulars as to certain disputes in addition to the information given in the tabular statement.

Mining

One dispute was carried over from June, the strike of gold miners at Wells, B.C., which began on May 25 for an agreement with the International Mine, Mill and Smelter Workers' Union, wage increases, etc. Proposals for reference of the dispute to a Board under the Industrial Disputes Investigation Act not being accepted, the strike continued. About the middle of July one of the mines was reopened with a partial staff which was increased to 175 by the end of July, as compared with a normal staff of 260. An Employees' Co-Operative Association had been organized. On July 30 the union voted to call off the strike.

The strike of coal miners at Glace Bay, N.S., on July 22 was in protest against the presence of smoke from an adjacent power plant, and it was stated that it would be some time before equipment for preventing this would be in operation.

The strike of coal miners at Stellarton, N.S., was against the dismissal of one employee for unsatisfactory work and persistent absenteeism after warning. After one day the union ordered a return to work, referring the case to the district officers.

Manufacturing

Seven of the disputes were carried over from June and four of these were unterminated at the end of July, while fourteen disputes began during July.

Rubber Products.—The strike of rubber workers in one establishment at Toronto on June 21 was unterminated at the end of the month but negotiations for a settlement were expected. Various labour organizations placed the company's products on the unfair list and the establishment was picketed.

The strike involving a small number of the employees in one manufacturing establishment at Kitchener, Ont., on July 14, causing the plant to be closed down, (involving nearly seven hundred employees indirectly) was terminated in two days when the union refused to approve the action of those who refused to work with non-union workers.

Fur, Leather, Etc.—The dispute involving tannery workers in Toronto since June 1 was terminated on July 26 when the union advised its members that it could no longer provide relief and that they might resume work. Three hundred applied for positions but the employer was able to take on only forty at the time. At the end of June negotiations for a settlement were held but the employer refused to take back all and the union held out for re-employment of the entire number. Early in July two pickets were fined for assault and one was sentenced to imprisonment for thirty days.

The strike in Toronto in one establishment manufacturing leather clothing from July 1 to July 3 was terminated by an agreement with the United Garment Workers of America providing for wage increases, the forty-hour hour week, closed union shop and the union label. Similar agreements were reported to have been made with other manufacturers in Toronto and Hamilton.

Pulp and Paper.—The strike of pulp and paper mill employees at Three Rivers, P.Q., involved members of the International Brotherhood of Paper Makers and the International Brotherhood of Pulp, Sulphite and

Paper Mill Workers, demanding recognition for collective bargaining and in protest against recognition of the Catholic Federation of Pulp and Paper Employees of Canada, which the former unions claimed did not represent a majority of the employees. It is reported that strikes were called at the plants of the employing company at Shawinigan Falls and Grand Mere but that only a small number of workers failed to report for work so that these strikes were not effective. At Three Rivers 340 out of 650 workers were reported to have ceased work and picketed the approaches to the establishment. By July 15 a number of employees had commenced operation of the plant and this number was reported to have increased to several hundred. The international unions announced that sympahetic strikes of other workers in non-union paper plants, of truckers, teamsters, longshoremen, seamen, etc., might be called in support of the strikers. On July 16, representatives of the unions on strike and the employing company met at Quebec with the Premier of the province. The latter pointed out that recently enacted legislation of the province protected the workers in their right to organize and that the closed union shop was undesirable. It was agreed that the management would meet the union representatives to discuss wages and working conditions and union recognition and the strike was called off immediately.

TEXTILES, CLOTHING, ETC.—The strike of clothing factory workers at Sorel, P.Q., on May 24, to secure the enforcement of an agreement terminating a strike on May 19 and May 20 was terminated by the return of workers on July 16 when a compromise was reached.

The strike of hat factory workers at Brockville, Ont., which commenced on June 26, remained unterminated at the end of the month, various efforts at conciliation being unsuccessful. A committee of citizens secured from the management an offer to meet representatives of their employees but not of the union to negotiate a settlement and, this not being accepted, early in August conciliation officers of the federal and provincial Departments of Labour met the parties and secured an offer from the management which the union did not accept. The establishment had continued to operate with about one-third of its normal staff and during July twenty-one strikers were arrested on charges of intimidation, nine being acquitted and twelve convicted and given suspended sentences. Two were charged with assault, one being acquitted and one convicted and fined.

The strike of employees in one woollen mill at Peterborough, Ont., at the end of June and another on July 2 continued throughout the month. The Deputy Minister of Labour for Ontario met the management early in July and finally arrangements were made for the management to meet a committee of the striking employees on July 16. The strikers demanded recognition of the United Textile Workers of America, ten per cent increase in day wages and twenty-five per cent in piece rates with time and one-half rates for overtime. This was refused by the management and negotiations were broken off. At the request of the union a conciliation officer of the provincial Department of Labour arrived in Peterborough on July 22 and arranged for another conference for July 28. The management offered a minimum rate of 32 cents per hour for experienced weavers and a reduction in hours to fifty per week with time and one-half rates for overtime. The strikers then decided to ask the Ontario Industry and Labour Board to deal with the dispute. A slight clash between pickets and police occurred early in July when trucks carrying goods from the plant were held back. On July 31 a moving picket line prevented some workers from entering one of the plants until police opened a passage. No disturbance, however, occurred.

Cap factory workers in three establishments in Winnipeg ceased work on July 8 to secure union agreements with increases in wages, and a forty-two hour week instead of forty-four. It was stated that four out of seven shops with 130 employees had signed the agreement and the remaining three had only about twenty employees. By the end of the month nearly all on strike had resumed work but the union had not called the dispute off.

Cotton factory employees in three mills of one company at Cornwall, Ont., ceased work on July 21, the employing company not having promptly accepted the proposal of the local union of the United Textile Workers of America to negotiate for a union agreement, twenty per cent increases in wages, time and one-half for overtime after fifty hours per week, and certain other changes. The union claimed that eighty per cent of the employees had joined the union. The company sent a circular letter to each employee stating that it was willing to meet representatives of its employees, that the wage increase was not possible and that wage rates had already been restored to the 1929 level and increased by six per cent in May, 1937; also that improved ventilation was being provided for. At the request of the union and the local member of Parliament the Chief Conciliation

Officer of the Department of Labour met the general manager at Montreal and the Mayor of Cornwall attempted to arrange for a meeting between the management and representatives of the strikers at Cornwall, but the union refused to meet the management unless accompanied by the local president who was not an employee, and this was refused by the company. As objections were made to the United Textile Workers of America which is affiliated with the Committee for Industrial Organization in the United States (Labour Gazette, December 1935, p. 1088) the union officials applied to the President of the Trades and Labour Congress of Canada, with which it is affiliated, to charter a Canadian organization of textile workers and approval of this was secured from the American Federation of Labour and from the President of the Amalgamated Clothing Workers of America, who is the member of the Committee for Industrial Organization in charge of work among textile and clothing workers. A Canadian Textile Workers' Council was, therefore, formed. On July 27 a meeting of the management and a committee of employees arranged by the Mayor of Cornwall was held on July 28. The company offered to make individual adjustments in wages but not a general increase. The committee was reported to be ready to accept a graded scale of increases by which the lower paid classes would benefit chiefly. Negotiations were broken off until August 2 when a second meeting was held but a settlement was not reached. The union then applied to the Minister of Labour for intervention and he proposed that the dispute should be referred to a Board under the Industrial Disputes Investigation Act with the consent of both parties, work being resumed immediately. The strikers agreed to this but the company refused and asked the government of Ontario to refer it to the Ontario Industry and Labour Board. At the end of the month the dispute was unterminated.

The strike of men's clothing factory workers in one establishment in Montreal from July 20 to July 29 was terminated by an agreement with the Amalgamated Clothing Workers of America providing for the closed union shop and adjustment of grievances in connection with the collective agreement in force for the industry under provincial legislation.

Miscellaneous Wood Products.—Employees in one sawmill at Blind River, Ont., demanded increases in wages from $2.25 per ten hour day to $3.00 but compromised at $2.50 per day with a bonus of 25 cents per day for all who remained throughout the season. The strike lasted from July 8 to July 20 and the strikers joined the Lumber and Sawmill Workers local of the United Brotherhood of Carpenters and Joiners of America. The Ontario Industry and Labour Board was reported to have begun an inquiry into wages in the district but in the meantime conciliation was effected by the Honourable Peter Heenan, Minister of Lands and Forests, former Minister of Labour for the Dominion.

A similar dispute involving sawmill workers at Thessalon, Ont., was settled by an increase in wages of fifty cents per day.

A similar strike at Foleyet, Ont., was unterminated, but most of the employees in mills of the same employer at Tionaga were reported to have returned when a bonus of $35 for the season was offered.

Metal Products.—The strike at Montreal of brass finishers, moulders, machinists, etc., members of the Amalgamated Association of Iron, Steel and Tin Workers of North America, was terminated by the return of workers and the employer agreed to re-employ them, as a result of the intervention of the resident conciliation officer of the Department of Labour. At the request of the union conciliation by the provincial Department of Labour was attempted but was not accepted by the employer and an attempt at negotiations on July 17 was not successful. The plant had recommenced operations and the number of employees was increasing and on July 22 the union voted to resume work.

Non-Metallic Mineral Products.—The strike of employees in one brick and tile manufacturing establishment at Cooksville, Ont., was terminated in two and one-half hours, the employees securing increases in wages at 40 cents to 75 cents per hour instead of 30 cents to 65 cents.

The employees on strike at Blubber Bay, Texada Island, B.C., in one establishment manufacturing lime and lumber were members of the Lumber and Sawmill Workers' local of the United Brotherhood of Carpenters and Joiners. The employer offered to negotiate with a committee of employees but not with union representatives and the dispute was unterminated at the end of the month.

Miscellaneous Products.—The strike of button factory workers at Kitchener, Ont., was against the speeding up of machines but when the management pointed out that it would increase earnings the employees agreed to give it a trial.

Construction

Buildings and Structures.—The strike of lathers in Vancouver involved six employers for one day and one, employing a large percentage of the workers, for five days. A closed union shop agreement was signed.

HIGHWAY CONSTRUCTION.—The strike of labourers crushing stone at Pelee Island, Ont., was to secure a wage increase from 35 cents per hour to 40 cents. The employer replaced the strikers with experienced labourers from Windsor at 40 cents.

Transportation

WATER.—Longshoremen engaged in unloading pulpwood at Thorold, Ont., demanded recognition of the International Longshoremen's Association, a local of which had been organized recently. The employing pulp and paper company had agreements with the International Brotherhood of Papermakers and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers covering all work. It was arranged betwen the latter and the longshoremen's union that the handling of pulpwood to the stock piles would be done by the longshoremen. An increase in wages was then negotiated with the employer.

The pulpwood loaders at Parrsboro, N.S., demanded an agreement with the International Longshoremen's Association with a higher wage scale but the ship on hand was sent to another port and other men were brought in to load ships arriving later.

Service

BUSINESS AND PERSONAL.—The hotel employees at Vancouver secured wage increases for some classes of employees and an agreement applying to certain classes of workers.

The beverage dispensers on strike at Drumheller, Alta., secured an agreement reported to provide for the wage scale in force at Edmonton and Calgary.

The strike of restaurant employees at Regina involved only seven employees out of twenty-two, the union alleging discrimination against a union employee whereas the employer stated he was dismissed for misconduct. A picket was charged with watching and besetting, the case being adjourned.

A number of restaurant employees in one establishment at Vancouver, B.C., ceased work demanding recognition of the international union of hotel and restaurant employees instead of the United Hotel and Restaurant Employees' Union of Canada, a local independent organization. The employer secured an injunction against picketing.

RECREATIONAL.—Three strikes of golf caddies have been recorded and included in the accompanying table, all for the purpose of securing increases in pay. There were also reported other disputes involving caddies in other localities causing brief stoppages of work.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1937*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to July, 1937				
MINING, ETC.—				
Gold miners, Wells, B.C...	2	378	8,000	Commenced May 25, 1937; for union recognition and wage increases; terminated July 30, return of workers, in favour of employers.
MANUFACTURING—				
Rubber Products—				
Rubber factory workers, Toronto, Ont.....	1	35	910	Commenced June 21, 1937; against discharge of workers alleged to be for union activity; unterminated.
Fur, Leather, etc.—				
Tannery workers, Toronto, Ont.....	1	400	8,000	Commenced June 1, 1937; against employment of a certain worker; employment conditions no longer affected by July 26, 1937; in favour of employer.
Textiles, Clothing, etc.—				
Men's clothing factory workers, Sorel, P.Q....	1	250	3,000	Commenced May 24, 1937; for enforcement of agreement terminating strike of May 19, 1937; terminated July 15, by negotiations; compromise.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1937*—*Continued*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to July, 1937.—Continued				
Custom tailors, Toronto, Ont.	1	20	520	Commenced May 20, 1937; for union recognition, wage increases, etc.; unterminated.
Hat factory workers, Brockville, Ont.	1	174	4,500	Commenced June 26, 1937; for union recognition, increased wages and changes in working conditions; unterminated.
Textile factory workers (woollen), Peterborough, Ont.	1	340	8,000	Commenced June 29, 1937; for increased wages; unterminated.
Metal Products— Plumbing supplies factory workers, Montreal, P.Q.	1	100	1,500	Commenced June 29, 1937; for recognition of union and increased wages; terminated July 22, by return of workers; in favour of employer.
(b) Strikes and Lockouts commencing during July, 1937				
Logging— Loggers, Parkhurst, B.C.	1	15	15	Commenced July 3; against discharge of certain workers and for increased wages; terminated July 3; negotiations; wages increased but employees not reinstated.
Mining, Etc.— Coal miners, Glace Bay, N.S.	1	400	2,000	Commenced July 22; for change in working conditions, ventilation; work resumed July 28 pending new arrangements.
Coal miners, Stellarton, N.S.	1	180	180	Commenced July 23; against discharge of worker; terminated July 23; return of workers pending investigation; indefinite.
Manufacturing— *Rubber Products*— Rubber factory workers, Kitchener, Ont.	1	40	80	Commenced July 14; against employment of non-union workers; terminated July 15; negotiations; in favour of workers.
Fur, Leather, Etc.— Leather garment factory workers, Toronto, Ont.	1	35	105	Commenced July 1; for renewal of agreement with increased wage rates; terminated July 3; negotiations; in favour of workers.
Pulp and Paper— Paper mill workers, Three Rivers, P.Q.	1	340	1,500	Commenced July 12; for recognition of certain unions; terminated July 17; conciliation (provincial); compromise.
Textiles, Clothing, etc.— Cap factory workers, Winnipeg, Man.	3	19	300	Commenced July 8; for recognition of union and shorter hours; terminated by July 31; return of workers; in favour of employers.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1937*—*Continued*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during July, 1937.—Continued				
Men's clothing factory workers, Montreal, P.Q.	1	85	765	Commenced July 20; for union recognition; terminated July 29; negotiations; in favour of workers.
Cotton factory workers, Cornwall, Ont.	3	1,700	17,000	Commenced July 21; for recognition of union, increased wages and improved working conditions; unterminated.
Miscellaneous Wood Products—				
Sawmill workers, Blind River, Ont.	1	100	1,000	Commenced July 8; increased wages and union recognition; terminated July 20; conciliation (provincial); compromise on wage increase and workers' committee recognized.
Sawmill workers, Thessalon, Ont.	1	200	1,800	Commenced July 10; for increased wages; terminated July 19; negotiations; compromise.
Sawmill workers, Foleyet and Tionaga, Ont.	2	150	1,000	Commenced July 22; for union recognition and wage increase; unterminated.
Metal Products—				
Foundry workers (Moulders, etc.), Ottawa, Ont.	1	6	30	Commenced July 12; for increase in wages and against short time; terminated July 19; negotiations; in favour of workers.
Non-Metallic Mineral Products—				
Brick and tile workers, Cooksville, Ont.	1	266	66	Commenced July 5; for increased wages; terminated July 5; negotiations; in favour of workers.
Lime factory workers, Blubber Bay, B.C.	1	133	1,000	Commenced July 23; for recognition of union and increased wages; unterminated.
Miscellaneous—				
Button factory workers, Kitchener, Ont.	1	15	90	Commenced July 26; against changes in working conditions; terminated July 31; in favour of employer.
CONSTRUCTION—				
Buildings and Structures—				
Steel erectors, Port Hope, Ont.	1	10	30	Commenced July 5; for extra pay for work out of town; terminated July 7; negotiations; in favour of workers.
Lathers, Vancouver, B.C.	6	90	190	Commenced July 5; for hourly wages instead of piece work; terminated July 10; negotiations; in favour of workers.
HIGHWAY—				
Stone crushers, Pelee Island, Ont.	1	18	18	Commenced July 15; for increased wages; terminated July 16; replacement of strikers; in favour of employer.

Restaurant employees, Regina, Sask.	1	7	105	Commenced July 15; against dismissal of union employees; unterminated.
Waitresses (restaurant), Vancouver, B.C.	1	8	104	Commenced July 17; for recognition of certain union and increased wages; unterminated.
Recreational—				
Caddies (golf), Toronto, Ont.	1	500	5,500	Commenced July 1; for increased wages and certain playing privileges; terminated July 12; negotiations; compromise.
Caddies (golf), Toronto, Ont.	1	100	500	Commenced July 3; for increased wage rates terminated July 7; negotiations; compromise.
Caddies (golf), Cobourg, Ont.	1	25	25	Commenced July 23; for increased wages; terminated July 23; negotiations; in favour of workers.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1936. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in June was 84 and 22 were still in progress from the preceding month, making a total of 106 in existence during the month, involving 37,000 workers with a time loss of 111,000 man working days for the month

Of the 84 disputes beginning in June, 23 were over demands for increases in wages, 20 arose over other wage questions, 4 were over questions of working hours, 21 were over questions respecting the employment of particular classes or persons, 8 were over other questions respecting working arrangements, and 8 were over questions of trade union principles.

Final settlements were reached in 75 disputes of which 19 were settled in favour of the workers, 37 were settled in favour of the employers, and 19 resulted in compromises. In 6 other disputes, work was resumed pending negotiations.

France

On July 10 employees of restaurants and hotels in Paris ceased work refusing to accept a compromise settlement of their demands that a forty hour week be enforced. The employers had attempted to get the men to agree to a modification of the government's decree for the period of the Paris Exposition. Picketing resulted in some disorders. On July 20, employees and operators signed an agreement by which the workers accepted a six day week and the employers agreed to rehire workers who had taken part in the strike. The government agreed to the modification of its five day week decree in this instance. Press reports placed the number of strikers at between 6,000 and 40,000.

United States

Preliminary estimates of strikes in April and May 1937 indicate a slight increase in the number of strikes in May as compared with April and an increase of about 60 per cent in the number of workers involved. This increase was due in a large measure to the strike against four independent steel companies, which is mentioned below. There was a slight decrease of time loss in May as compared with April, due in part to the large number of automobile strikes which began in March and continued into the early part of April. Although the steel strike began in May and involved a relatively large number of workers, it began too late in the month to accumulate a large number of man-days time loss.

As compared with May 1936, the estimates for May of this year indicate increases of 140 per cent in the number of strikes, nearly 300 per cent in the number of workers involved, and 200 per cent in man-days time loss.

According to the estimates, which as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received," 495 disputes began during May, which with 285 disputes continued from April made a total of 780 disputes in progress during the month, involving approximately 400,000 workers with a resultant time loss of 3,125,000 man working days.

The strike against four independent steel companies which began on May 26, was not terminated during July but a large number of the plants affected were reopened during the month. In some cases the Steel Workers' Organization Committee was acknowledged as the bargaining agent but a number of the plants were reopened either by obtaining new workers or by the return of workers who had been on strike. Complaints regarding the labour practices of several of the companies involved have been made to the National Labour Relations Board and are still under consideration by that body. The reopening and the continued operation of the steel plants has been accompanied by picketing and in some cases by disorders. On July 11, two men were killed in a riot at Massillon, Ohio and on July 26 disorders during picketing re-

sulted in the death of one man and the injury of about forty others, at Cleveland, Ohio.

On July 8, the joint board of the cloakmakers' unions ordered a strike which affected 35,000 workers in 2,000 factories in the city of New York. Collective agreements covering the garment making industry had expired on June 1. By July 1, both parties had agreed to new agreements which would give the workers increases of 10 per cent in wages and a 34 hour week (to be reduced to 32½ hours, effective June 1, 1939), but the employers refused to insert an undertaking that work would not be sent out to factories of allied needle industries operating under lower wage standards than those prevailing in the coat and suit industry. As a result of arbitration the strike was settled in favour of the workers and work was resumed on July 13.

Annual Report on Mining in Alberta in 1936

The output of coal produced from the Mines of the Province of Alberta during 1936 was 5,696,375 tons with a valuation of $14,720,004.06, being an increase of 233,402 tons over the output of 1935, according to the annual report of the Mines Branch of the Alberta Department of Lands and Mines.

In addition to the above tonnage there were 2,603 tons produced by farmers under permit, for their own use, which tonnage has not been included in the total output. The report also states that there has also been a considerable tonnage produced by farmers without either permit or lease, and of this tonnage there is no record. The report shows that the coal produced during the year was disposed of as follows: 1,356,690 tons sold for consumption in the Province of Alberta; 2,000,284 tons sold for consumption in other Provinces of Canada; 27,397 tons sold for consumption in the United States; 1,969,560 tons sold to Railroad Companies for locomotive use; 19,472 tons used making briquettes; 97,353 tons used making coke; 149,600 tons used under colliery boilers; 6,912 tons used by colliery railroads; 56,239 tons put to stock; 80,203 tons put to waste. The above tonnages include coal lifted from stock and waste heaps, which is not included in the total output.

There were 305 mines in operation during the year, of which 17 were opened, 11 re-opened and 30 abandoned. In addition to the mines abandoned there were 28 mines temporarily closed, leaving 277 mines in operation as at December 31, 1936.

Labour and Employment.—During the year there were 411 persons examined for certificates of competency as coal miners, of whom 365 were successful, making a total of 14,310 certificates issued to coal miners to December 31, 1936. On December 31, 1936, there were 9,956 men employed in mines being an increase of 265 men over the number at the end of 1935. The average number of persons employed below ground totalled 5,940 and the average number above ground 2,170. The per capita production in all mines of the Province based on the total average number of men employed (8,110) was 702 per man employed, while 959 tons was the average for each man employed underground.

Accidents.—The total number of fatal accidents was 11 as compared with 35 in 1935, the report states. There were in all 191 accidents, 79 of which were listed as serious and 101 classed as slight accidents. Twenty of the total number of accidents occurred above ground and 171 underground.

In 1936 the ratio of accidents per 1,000,000 tons of coal mined and per 1,000 men employed was 33·53 tons and 23·55 tons respectively. "Haulage" was the greatest single factor in the cause of accidents, 49 accidents, the same number as in 1935, being attributed to this cause.

During the year accident prevention activities were continued, as in other years, analysis of mine air, and tests of rock-dust for silica content being carried out, as well as tests of mine air with gas detectors.

ANALYSIS OF PUBLIC AID BY NATIONAL EMPLOYMENT COMMISSION

THE National Employment Commission has commenced the periodic publishing of an "Information Service," the first number of which is devoted primarily to defining the various classes receiving public aid. Under the heading, "Unscrambling This Business of Relief," the Commission divides the problem into its various categories.

At the outset, it indicated that while in June, 1936, there were 1,065,000 persons in Canada reported as being in receipt of direct relief (provided jointly by the Dominion, the Provinces, and the municipalities), this total had declined by June, 1937, to 932,000 according to a preliminary estimate made by the Dominion Department of Labour with the co-operation of the provincial governments.

Answering its query—"Are there 932,000 persons unemployed and in receipt of relief?" the Commission declared:

"By no means—not unless one is willing to speak of infants, school children, wives, farmers working from sunrise to sunset, and many groups incapable of employment as being unemployed. Certainly no one is going to attempt to find jobs for these groups. Under reasonable interpretation of the word, unemployed, only a small fraction of the 932,000 is to be so classed."

The Commission then gives the following summary of the situation:

"On the basis of analysis made during the year by the National Employment Commission, 27 per cent of the total was made up of farmers and their dependents (about two-thirds being dependents); 46 per cent were dependents of non-worker types, i.e., housewives, children under sixteen, and aged persons; 5 per cent were reported as unemployable or of doubtful employability (an ultra-conservative figure); and only 22 per cent as employable persons. It is only the last group who can be classed as unemployed; they are the only ones in the total for whom jobs are to be found, probably at present less than 200,000. Even in this group there is a substantial number who are not strictly to be classed as unemployed since they have not previously supported themselves as wage-earners but have been workers on their own, —fishermen, trappers, shopkeepers, operators of boarding houses, and others. We do not know, as yet, precisely how many there are in this group, but we know that of the total of 932,000 persons on 'relief', distinctly less than 22 per cent are really unemployed."

In line with the breaking down of the problem into its component parts, the Commission considered that the nomenclature commonly applied need clarification and more specific definition in order to "call things by their right names." It then proceeds:

"Let us reserve the term 'relief' for its original meaning in this country, the help given by municipalities, with or without the assistance of the province, or by private agencies, to the indigent poor and unfortunate. Let us apply the term, assistance, to help given under pre-determined conditions to particular groups by separate statutes, such as Mothers' Allowances and Old Age Pensions. The term, Aid, should be used to describe the type of help to which the Dominion contributes. If we are to see the divisions and the magnitude of the problem before us, we must further divide Aid into Unemployment Aid for those who are unemployed, Occupational Aid for workers "on their own" who have lost their occupation or their earnings from it, and Agricultural Aid for farmers who still have their farms and their occupation but, because of drought or other misfortune, are without income. It is desirable to indicate clearly whether the Aid is material, i.e., food, clothing, shelter, etc., or work Aid, the provision of special work, or special projects Aid, training, reconditioning, and special rehabilitation help. The efforts of private philanthropy might well be given the term of Voluntary Aid which would clearly indicate their purpose is help of any form toward the alleviation of distress provided by a privately organized and administered charitable or benevolent organization."

The Commission divided the problem into the following classifications:

1. Public Aid—For those suffering from unemployment, loss of occupational earnings (as in fishing and trapping) and agricultural distress. Public aid may be given either in the form of: (*a*) Material aid (food, shelter, etc); (*b*) work aid (employment on road construction, etc.); or (*c*) special projects aid (such as is now being put into operation under Dominion-Provincial agreements for youth training).
2. Public Assistance—e.g., Mothers' Allowances, Old Age Pensions.
3. Public Relief.
4. Voluntary Aid—help of any kind provided by a privately organized service supported by voluntary contributions.

Unemployment Aid.—Dealing with unemployment aid, the Commission observed:

"Populary 'relief' is conceived to be 'Unemployment Relief.' Legally it is for the relief of 'unemployment and agricultural distress.' But that part which is paid because of unemployment is not limited to the unemployed. It is made to conform by rough standards to the need of the family. It is desirable that a community should help its unfortunate according to their need, but such Aid as is given by reason of unemployment should be such as will make employment at normal wages for unskilled workers the more advantageous alernative. In nearly all communities 'relief' allowances are varied with the size of the family. The result is that for large families above a certain size 'relief' allowances are higher than prevailing wages. It is doubtless desirable that the needs of the large family should be met, but unemployment should not be made the medium of achieving such a condition. It is the simplest of common sense that unemployment aid should not be used as an alternative to decent wages but its payment should be limited to those genuinely unable to secure work. It should be fairly calculated so that it will be to the advantage of the unemployed to seek and accept employment. Aid to meet other conditions may be necessary but it should conform to some other basis."

Rehabilitation.—In conclusion, the Commission referred to the necessity of rehabilitation programs, thus:

"There is another compelling reason for differentiating the groups to whom Aid is being paid. Constructive policy requires that a major objective in the programs of all Governments shall be rehabilitation of those now 'on relief' in employment or gainful occupation. We need not delude ourselves with the comfortable theory that with the current rapid increase in employment, the unemployed are going to float back into employment as a beached boat might float on a rising tide; the boat is firmly struck in the mud. The employability of those who were formerly employed has declined seriously during the depression. They have lost some of their skill, some of their morale, some of their physique, and most important for some of them, some of their youth. They are less desirable as employees than they were. There are others who have become of employable age since the depression began and are without training, experience or discipline. We face rising employment with a working force less skilled, more unskilled than previously. What surplus labour we have, is, with few exceptions, unskilled, and a good many are not to a high degree employable. A small beginning toward tackling this critical situation is the appropriation of $1,000,000 by the Dominion Parliament for youth training projects. Even this amount can be made the nucleus of an important co-operative effort on the part of Governments, industry, labour organizations, and welfare associations. But the beginning of all fruitful efforts at rehabilitation of those now 'on relief' is the unscrambling of the 'relief' business and the calling of things by their right names."

Included in the bulletin are a series of charts and tables indicating: (*a*) Distribution of persons on Dominion aid, by worker status and type of locality; (*b*) persons in receipt of aid to which the Dominion contributed; (*c*) Aid Recipients, Unemployment and Employment, 1937; (*d*) Building and Employment, 1937.

Manufacturing in Ontario

According to a bulletin issued recently by the Dominion Bureau of Statistics, Ontario, is the most important manufacturing province in the Dominion, a position which has been maintained over a long period of years. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production equal to that of the remainder of the Dominion.

The gross value of manufactured products in Ontario which totalled $1,423,562,474 in 1935 represents an increase of 13·4 per cent as compared with 1934. The number of firms reporting was 10,266 with a capital of $2,063,721,375 in 1934. There were 281,438 persons employed by these manufacturing establishments, and a total of $303,807,207 in salaries and wages was paid during 1935 compared with 259,621 persons with a total in salaries and wages of $270,834,102 in 1934.

Prairie Provinces Census Bulletin

The Dominion Bureau of Statistics has issued bulletin No. XXVIII of the 1936 Census of the Prairie Provinces. This bulletin sets forth the population according to age, conjugal condition, birthplace, racial origin, immigrant population with year of immigration, naturalized population with year of naturalization, citizenship of the population with country of allegiance, population speaking one or both of the two official languages, other tongue, number of years at school, educational status, school attendance, and sex, for the provinces as a whole. This bulletin may be obtained from the Dominion Bureau of Statistics at 25 cents per copy.

YOUTH TRAINING IN SASKATCHEWAN, ALBERTA AND BRITISH COLUMBIA

Reconditioning Projects provided for in Agreement with Dominion

AGREEMENTS with the Provinces of Saskatchewan, Alberta and British Columbia have been approved providing for youth training and reconditioning projects in connection with the allocation of the $1,000,000 voted by Parliament at its last session for projects of this nature. (LABOUR GAZETTE, April, 1937, page 414.) An agreement with the Province of Manitoba was announced on July 3 (LABOUR GAZETTE, July, 1937, page 743.)

In an announcement made on July 23, the Hon. Norman McL. Rogers, Minister of Labour, gave the following details regarding the projects:—

The combined allocation for the three provinces will absorb something less than $300,000, it being provided in all agreements that the Dominion contribution shall be on a dollar-for-dollar basis with the province concerned.

In addition to plans already approved the Western Provinces are preparing further plans to take up the entire allocation made by the Dominion Government.

These youth training plans have evoked widespread interest. Suggestions and offers of co-operation have been received from industrial concerns, labour and social service organizations. All plans submitted are passed on by the National Employment Commission, and originate largely from general schemes worked out by the Youth Employment Committee and Women's Employment Committee, whose members have also co-operated freely with the Governments concerned. The Provincial Governments have been eager to take advantage of this opportunity to afford training facilities to their unemployed young people.

All agreements apply to "unemployed young people." This phrase is defined so as to bring within the plans "individuals, male or female, from eighteen to thirty years of age inclusive." They must be necessitous, unemployed and registered for employment with the Employment Service of Canada. In localities where the Employment Service has no agencies, they must be certified by the Clerk of the Municipality or appropriate provincial authority as being in necessitous circumstances. Provision is made for the Minister of Labour to extend the age limits laid down, in either direction, on recommendation of the Supervisor of youth training projects.

Saskatchewan

Youth training plans of the Province of Saskatchewan give special consideration to young people from the drought areas. In co-operation with the University of Saskatchewan it is proposed to provide occupational training allied to agriculture for unemployed young people from farms and rural districts of the province. For men local and district courses in farm subjects, health and physical education, "short" agricultural courses at the University, and "winter" agricultural courses, are planned. Courses in household economics, home craft, handicrafts and suitable farm subjects are being arranged for young women. Provision for registration, vocational guidance, specialized training and placement of unemployed young women in the urban localities is part of the Saskatchewan program.

Alberta

Similar in certain respects to Saskatchewan plans the Province of Alberta proposes to co-operate with the University of Alberta in training allied to agriculture for unemployed young people from farms and rural districts, with special consideration to those from officially recognized drought areas. The program includes local agricultural courses for young men and women, at selected centres; district farm courses for men; and rural home-making courses for women.

Reconditioning of unemployed young men by employing and training them in forest conservation as assistants to forest rangers is another Alberta project. A plan to provide for the training of unemployed young women, residing in urban districts, as household workers and for specialized services, is included in the Alberta program.

British Columbia

Four training and reconditioning projects designed to benefit unemployed youth in both rural and urban districts have been approved in the agreement with British Columbia. Forestry work training, placer mining training, urban occupational instruction, and physical and health education are included in the plan for which provision is made. Practical and technical courses in forestry work with a training period of approximately four months, are planned for young men. Training for young men in placer mining

followed by an opportunity for prospecting in small parties is provided for. Details of the occupational training for young people in urban centres have not been completed yet by the province. When complete they will be submitted to the Dominion Minister of Labour for his approval. Where occupational training is established, provision will be made for theoretical training and practical shop instruction.

A project to provide physical training and health education by assisting to extend, in approximately 75 centres, present activities of the provincial Department of Education in this field is another feature of the British Columbia agreement. The province will select the centres to be served under this project.

All the Western Provinces have now made agreements under which plans for youth training and reconditioning will be carried forward with the minimum of delay. Agreements with the remaining provincial governments will be announced when completed.

OLD AGE PENSIONS IN CANADA

Financial and Statistical Summary of Old Age Pensions as at June 30, 1937

The accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at June 30, 1937. (The text of the Old Age Pensions Act was given in the Labour Gazette for April, 1927, page 375).

The Act made provision for the establishment of a Dominion-provincial pension system to be effective in such provinces as might enact and give effect to special legislation for this purpose. With the recent entry of New Brunswick and Quebec into the system, all the provinces are now participating and the scheme is completely national in scope.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed the Department of Labour of Canada (then the administrating Department) paid quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the total expenditure.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935. Accordingly the following table has been prepared in the Department of Finance.

FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1937

—	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	New Brunswick Act effective July 1, 1936	Nova Scotia Act effective Mar. 1, 1934	Ontario Act effective Nov. 1, 1929
Total number of pensioners	9,278	11,065	11,730	10,363	13,537	56,358
Average monthly pension	18·21	19·44	18·67	13·49	14·56	18·25
*Percentage of pensioners to total population	1·20	1·48	1·65	2·38	2·52	1·53
*Percentage of persons over 70 years of age to total population	2·33	3·60	3·09	4·14	5·03	4·39
*Percentage of pensioners to population over 70 years of age	51·54	40·98	53·32	57·57	50·14	34·79
Dominion Government contributions for quarter ending June 30, 1937	375,777 80	474,961 28	496,105 05	320,411 57	449,020 78	(1) 2,432,071 61
Dominion Government contributions from inception of Act	6,870,347 65	10,432,036 20	11,200,604 21	1,188,719 87	5,424,207 63	51,803,964 10

*Percentages based on estimated population as at June 1, 1936, Dominion Bureau of Statistics.
(1)Includes part of March payment.

FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AS JUNE 30, 1937
—*Concluded.*

—	P.E.I. Act effective July 1, 1933	Quebec Act effective Aug. 1, 1936	Saskatchewan Act effective May 1, 1928	N.W.T. Order-in-Council effective Jan. 25, 1929	Totals
Total number of pensioners	1,761	37,453	11,552	6	163,103
Average monthly pension	10·50	18·29	16·52	18·80	
*Percentage of pensioners to total population	1·91	1·21	1·24	0·06	
*Percentage of persons over 70 years of age to total population	6·30	3·07	2·36	1·00	
*Percentage of pensioners to population over 70 years of age	30·36	39·42	52·51	6·00	
Dominion Government contributions for quarter ending June 30, 1937	41,142 75[2]	2,597,524 70[3]	440,200 59	425 53	7,677,641 66
Dominion Government contributions from inception of Act	553,658 62	4,942,631 75	10,124,015 27	11,753 50	102,551,938 80

*Percentages based on estimated population as at June 1, 1936—Dominion Bureau of Statistics.
[2]Included adjustment of payment made in previous quarter.
[3]Included payments from Aug. 1, 1936 for additional pensions granted during quarter.

LABOUR LEGISLATION IN NOVA SCOTIA IN 1937

THE Legislature of Nova Scotia was in session from March 2 to April 17, 1937. Important labour laws all of which were assented to on the latter date include a Trade Union Act and an Apprenticeship Act, a revised Metalliferous Mines Act and amendments to the statutes relating to industrial standards, mines and street trading in Halifax. The operation of the Nova Scotia Labour Act forbidding the employment of non-residents in Nova Scotia except under certain conditions was extended by an amendment of March 19 until May 1, 1938.

Collective Bargaining

A Bill respecting the right of employees to organize which was based on a draft Bill of the Trades and Labour Congress was introduced on March 24, 1937. It was amended in the House and clauses added to require trade unions to submit information concerning their organization to the Provincial Secretary.

The Trade Union Act (LABOUR GAZETTE, May, 1937, page 479), as it is called, defines a trade union as

> any lawful association, union or organization of employees, whether employed by one employer or by more than one employer which is formed for the purpose of advancing in a lawful manner the interests of such employees in respect of their employment.

It is stipulated that the word "employee" as used in the Act shall not include officers, officials or persons employed in any confidential capacity.

It is declared lawful for employees to form or to join a trade union and to bargain collectively with their employer or employers and for such bargaining to be conducted through the trade union and the officers of the trade union. Any employer refusing to bargain with a trade union representing the majority of the employees who are eligible for membership is made liable to a maximum fine of $100 for each offence of the kind or, in default of payment, to imprisonment for thirty days.

The Act declares it unlawful for an employer to seek to restrain an employee from joining a trade union or exercising his rights under the Act by making it a condition of a contract of employment that the employee will refrain from such exercise of his rights. This provision applies whether the contract be written or verbal and to contracts made before and after the enactment of the statute. Any employer, who by intimidation, threat of dismissal or by actual dismissal, or by threatening or imposing any pecuniary penalty, prevents or tries to prevent an employee from joining a trade union is liable to a fine not exceeding $100 for each offence or to imprisonment for thirty days. Where the employer is a corporation, there is a maximum fine of $1,000 for this offence. It is stipulated, however, that nothing in the Act shall interfere with the employer's right to suspend or discharge employees for proper and sufficient cause.

Every trade union is required to file with the Provincial Secretary a copy of its constitution and by-laws or other documents containing a complete statement of its objects. Before February 1 of each year, a general statement of the receipts and ex-

penditures for the preceding calendar year must be sent to the Provincial Secretary. The form and particulars to be required may be laid down by the latter. Members of trade unions are entitled to a copy of the statement furnished the Government if they apply to the secretary or treasurer of the union. A maximum penalty of $100 may be imposed for violation of this section.

The Act also provides that the treasurer or other officer having custody of the funds or property of a trade union shall account to the members at a meeting of the trade union, when required to do so by the rules, for all moneys received and paid by him since the last accounting, and shall have his accounts audited by a person named by the members of the union. When requested by the members, after an audit of his books, such treasurer or officer must hand over to such person as the union may designate the balance due from him and all securities, books and property of the union in his custody. If such treasurer or other officer refuses to hand over the property, the union, through the person designated by its members, may sue him for any balance alleged due from him and for the securities and other property in his possession.

Provision is made in the Act to ensure that deductions from wages for benefit societies, hospital charges and the like are made in accordance with the wishes of the employees. Where, in any industry by statute or by arrangement between employer and employees, such deductions are made by the employer, he must make periodical payments to the trade union of employees if, upon a ballot being taken under conditions fixed by the Minister of Labour after application for a vote has been made to him by the union, a majority of the employees vote in favour of such deductions and if each member of the union makes a written request to the employer to that effect and indicating the person to whom the deductions shall be paid. This section does not apply to the coal mining industry in which a check-off for union dues is provided for in the Coal Mines Regulation Act.

In industries where deductions from wages are made by the employer, whether by statutory provision or by agreement between employer and employee, the employer must furnish the Provincial Secretary, under a penalty not exceeding $100, with an annual return regarding the deductions made, in the form and with the particulars required.

Industrial Standards Act

Amendments in the Industrial Standards Act, 1936, which applies only to the building trades in Halifax and Dartmouth, authorize the Lieutenant Governor in Council to define any trade or occupation to which the Act applies and exempt persons employed temporarily where the total cost of the services performed for the employer together with the cost of the material supplied by the employer does not exceed $25. The original Act did not include temporary employees whose services did not exceed $100 in value.

The Apprenticeship Act

The Apprenticeship Act, which is to come into effect on proclamation, is largely similar to the Ontario statute of 1928 as amended, and the British Columbia Act of 1935. It provides for a system of apprenticeship for persons over 16 years of age to be established in the seven building trades designated in the Act, bricklayer, mason, carpenter, painter and decorator, plasterer, plumber, and electrician. Unlike the laws in Ontario and British Columbia, the Nova Scotia Act does not make provision for its extension to other trades.

The Act is to be administered by the Minister of Labour through the Deputy Minister as Director of Apprenticeship and the factory inspectors with the assistance of a provincial apprenticeship committee of five members which may be appointed by the Lieutenant Governor in Council to hold office during pleasure. Necessary expenses incurred by members of the committee in carrying out their duties under the Act are to be paid from sums voted for the purpose by the Legislature.

The Director is charged with carrying out the Act and seeing that it is observed. He is to keep a register of contracts of apprenticeship in the trades covered by the Act, promote interest in apprenticeship, assist in establishing an apprentice system in any industry, provide information for the Apprenticeship Committee, collaborate with educational authorities in the training of apprentices and make an annual report to the Minister.

After the Act is proclaimed in effect, no contract of apprenticeship may be made in a designated trade except in accordance with the Act. Without the consent of the Apprenticeship Committee, no male under 21 years of age may be employed for more than three months except under an apprenticeship contract as directed by the Act or unless the customary apprenticeship period has been completed. Contracts must be approved by the Apprenticeship Committee and registered by the Director before they become valid. Contracts may not be for less than one year. However, where a minor is employed as an apprentice under a verbal contract, the Act is not to apply until three months after it

comes into effect. If the Apprenticeship Committee approves, the period of such apprenticeship may be allowed as part of the time required to complete the full period under the Act.

Contracts must be signed by the employer and by the person to be apprenticed or, if the latter is a minor, by his father or by his mother, if the father is dead or incapable, or by his guardian. If a contract appears not to be for the benefit of the apprentice, the Director may refuse to register it. He may refuse, also, to register any cancellation or transfer of a contract of apprenticeship.

A contract may be terminated by the consent of all the parties when recommended by the Committee and registered by the Director. The Committee may cancel a contract on the request of one party if sufficient reason is shown or the Committee of its own motion may cancel a contract but such cancellations are of no effect until registered. An apprentice may be transferred from one employer to another in the same trade on the recommendation of the Committee.

Regulations may be made by the Lieutenant Governor in Council prescribing the qualifications of apprentices in any designated trade, the nature and number of classes to be attended and the courses to be given, providing for certificates on completion of the period, regulating the hours of labour and wages of apprentices in different branches of the trades and in different parts of the province, prescribing the manner in which contracts and matters pertaining to them must be submitted to the Committee for recommendation and to the Director for registration, providing for an examination of persons engaged in a designated trade when the Act becomes effective and for certificates of qualification for such persons, providing for the registration of employers and the fixing of fees for certificates and for registration, limiting the number of apprentices who may be employed by an employer and, finally, for prescribing the rates at which bonuses may be paid to employers of apprentices at the direction of the Minister.

A maximum fine of $100 for every day of default may be imposed on any person who enters into a contract of apprenticeship in a designated trade or any person who employs a minor in a designated trade except in accordance with the Act or any person who employs fewer apprentices than are prescribed by the regulations or who contravenes any provisions of the Act or regulations.

Mines and Quarries

The Metalliferous Mines and Quarries Regulation Act, 1937, reproduces much of the old statute but contains new provisions to ensure better ventilation, fire protection, sanitary conveniences and safety in the operation of quarries and in the use of electricity in mines. A new clause requires suitable apparatus for removing dust to be installed in every mill or plant where, by reason of dry crushing or otherwise, there is dust in the building in harmful quantity. The minimum age for persons employed in operating mechanical hoists conveying persons has been raised from 18 to 20 years and such operators must hold certificates as to their mental and physical fitness for the job. Medical certificates must be renewed annually.

The Mines Act which applies to all mines in the province, whether coal or metalliferous, was amended in several particulars. Of special interest is the change made in the provision requiring periodical returns to be made to the Minister of Mines by the lessee of any mine where mining operations are being carried on. Monthly returns are now required instead of quarterly. Returns must include the quantity and probable destination of coal, iron or other mineral obtained under the authority of the lease, the number of days' labour and the number and classes of persons ordinarily employed and a description of the shafts, quarries, works, machinery, railways worked or constructed during the preceding month. Returns in the form prescribed by the Minister must also be made monthly by the lessees or managers of gold and silver mines if the mines are being operated. Quarterly reports are required from the lessee setting out the particulars as to days worked, quantity of gold or silver obtained and its destination, and the amount expended for labour, equipment and supplies.

The Workmen's Compensation Act

Amendments to the Workmen's Compensation Act (LABOUR GAZETTE, May 1937, page 479) embodied most of the recommendations made by the special Commission appointed to inquire into the operation of the Act (LABOUR GAZETTE, May, 1937, p. 518).

The statute of 1937 is not to become effective until January 1, 1938, and it is stipulated that the increased rates of compensation provided for are not to apply to certain classes of the lumbering industry until so applied by order in council. The Commission recommended that a committee of lumber operators and the Workmen's Compensation Board

should make a thorough investigation into the question of workmen's compensation in that industry before the new rates are made applicable to that industry. The sections of the industry thus exempted include logging operations, saw and shingle and lath mills, cooperage and box shooks and excelsior manufacture.

The period during which a claim for compensation may be made, if compensation is to be payable, is reduced by the amendment from one year to six months after the accident or, in case of a fatal accident, to six months from the time of death. Failure to give notice of the accident as soon as practicable after it or to make a claim within the prescribed time is not a bar to compensation if, in the opinion of the Workmen's Compensation Board, the employer is not prejudiced by the delay or where the compensation is payable from the Accident Fund and the claim is a just one. A penalty not exceeding $50 or imprisonment for not more than 30 days in default of payment may be imposed on an employer who fails to report an accident within the three days prescribed by the Act.

Any employer or other person who obstructs or hinders a member of the Board or any person authorized by the Board in inspecting an establishment to see that proper precautions are taken to prevent accidents is made liable to a fine not exceeding $500 or, in default of payment, to imprisonment for not more than three months or to both fine and imprisonment.

"Medical aid" is now defined to include dental aid. The maximum of 30 days during which a workman is entitled to medical aid is retained in the Act but the further stipulation that the period during which medical aid might be furnished should not extend beyond 60 days from the date of the accident is repealed. Moreover, the Board is empowered to authorize medical aid for a longer period if, in its opinion, such aid is beneficial and would tend to conserve the accident fund. The fees for medical aid which the Board has had authority to fix are expressly required by the new Act to be fixed at not more than Board deems "reasonable and proper."

The rate of compensation payable in cases of disability is raised from 60 to 66⅔ per cent of the average earnings of the workman during the past year or for the time he has been employed by the employer if he has not been at work for a year. The maximum amount of "average earnings" that may be used to calculate compensation is increased from $1,200 a year to $1,500 a year. The minimum compensation to which a totally disabled workman is entitled is raised from $6 to $8 a week unless his earnings were less. In the latter case, he is paid the amount of his earnings.

For fatal accidents, the maximum compensation, exclusive of funeral expenses, that may be paid to all dependents is also raised from 60 to 66⅔ per cent of earnings. Provision is now made for monthly payments to a suitable person who acts as foster-mother to dependent children on the same basis as if she were the widow of the deceased workman.

The new provisions as to the scale of compensation are not applicable to accidents occurring before January 1, 1938.

Concerning compensation to workmen injured while outside the province the Act is amended to bring it into line with that in most of the other provinces. Compensation is now payable for accidents occuring outside the province to workmen who reside in Nova Scotia if the employer's place of business and the usual place of employment is within the province and if the employment without the province has lasted less than six months. Further, as in Manitoba and Ontario, even if the workman's residence is outside the province, he is eligible for compensation for an accident occurring while he is out of Nova Scotia temporarily in connection with his work, provided that the employer's place of business and the usual place of employment is within the province.

The amount of any assessment under the Workmen's Compensation Act was declared to be a first lien on the employer's business property subject only to municipal taxes. This section is revised to stipulate that mechanics', woodmen's or other statutory liens for wages have priority over the assessment claim.

The power of the Board to vary the rate of assessment on employers in the same class or sub-class of industry according to the hazard of the establishment is made more definite and the Board is expressly authorized to adopt a system of merit rating.

All regulations of the Board which are now in force are to be published in the *Royal Gazette* and no future regulations are to have any effect until they are approved by the Lieutenant Governor in Council and gazetted.

Street Trading

A section added to the Halifax City Charter gives the city council power to regulate, by a licensing system, the sale in the streets or from door to door of magazines, newspapers or other periodicals. One of the conditions that may be imposed relates to the ages of licence holders.

Non-resident Workers

The Nova Scotia Labour Act is continued in force until May 1, 1938. The Act prohibits any employer of 25 or more persons hiring a workman who has not been resident in the

province for at least a year unless the latter can produce a certificate from the Government employment agent in the town or city where he is to be employed, or from the town or municipal clerk if there is no employment office, that there are no unemployed persons resident in the town capable of and willing to do the work.

Early Closing

An amendment in the Towns' Incorporation Act adds barber shops to the places of business to which an early closing by-law may apply.

Old Age Pensions Act

The Nova Scotia Old Age Pensions Act of 1931 was amended to enable the province from time to time to enter into agreements with the Dominion Government for the payment of pensions in accordance with the Dominion Old Age Pensions Act as amended, thus authorizing the Nova Scotia Government to make changes in the system by agreement with the Dominion when desirable. The amendment is to be deemed to have been in force since September 6, 1933, when the provincial Act was proclaimed.

Co-operative Associations Act

A Bill to amend the Co-operative Associations Act, 1935, which was introduced by the Minister of Public Works and Mines was not passed. The Bill would have added to the objects for which co-operative societies might be formed under the Act that of building and dealing in land, buying, holding and selling real estate and personal property, and building, leasing and selling houses, shops, stores, libraries and other buildings necessary for any kind of business or for the use of the public.

British North America Act

A resolution moved by the leader of the Opposition but rejected by the Legislature was to the effect that the British North America Act should be amended to empower the Parliament of Canada to create and administer a social security plan consisting of insurance against accident, sickness and unemployment and of pensions for widows and orphans and for the aged and disabled. An amendment moved by the Attorney General was carried in which it was pointed out that the Speech from the Throne at the opening of the Legislature expressed the opinion of the Government that the judgments of the Privy Council on the legislation enacted by the Dominion in 1935 made it necessary to review the sections of the British North America Act assigning legislative powers to the Dominion and the provinces. While it was desirable that such measures should be Dominion-wide in their application and that the scope of social legislation should be extended, the Legislature took the view that the inquiry into taxation in Canada to be made by the Royal Commission proposed by the Dominion Government should include the question of the re-allocation of the cost of social services unless an agreement on these matters between the Dominion and the provinces should be reached in the meantime.

Occupational Accidents in U.S.A. During 1936

According to the *Statistical Bulletin* of June, 1937, published by the Metropolitan Life Insurance Company occupational deaths in the United States reached a number greater than any observed within the last five years. "Present estimates" the publication states, "place the number of such fatalities arising out of, or in the course of employment at 18,000, which is 1,500 more than occurred in 1935, an increase of 9 per cent. Among adult white male wage-earners insured in the Industrial Department of the Metropolitan Life Insurance Company, most of whom are engaged in industrial occupations, the rise in the death rate was even greater, namely 16·9 per cent. Occupational fatalities last year occurred at the rate of 25·6 deaths for each 100,000 insured male adults, which compares with a rate of 21·9 deaths per 100,000 in 1935."

It is pointed out that despite this very marked increase, the 1936 rate was far below the rate of 35·9 deaths per 100,000 recorded in 1929, the last year of full business activity.

The bulletin points out that only one type of fatal occupational accident—automobile accidents exclusive of automobile collisions with railroad trains, engines, or street cars—registered a decline in 1936 over 1935. Sizable increases took place in the death rates from traumatism by falls, by machines and in mines and quarries, which, together with automobile accidents, are the four most prolific causes of fatal occupational injury.

WORKMEN'S COMPENSATION IN ONTARIO, ALBERTA AND BRITISH COLUMBIA, 1936

Ontario

A further increase of 2,836 accidents during 1936 is recorded in the annual report of the Workmen's Compensation Board of Ontario, there being 61,382 accidents as compared with 58,546 in 1935. These figures include accidents not serious enough to involve payment of either compensation or medical aid and for which no claim was made, and others for which claims were made but which were not allowed by the Board. At the close of the year there were 1,375 claims in assembly as compared with 1,120 at the end of 1935, notice of the accident having been given but reports necessary to deal with the case not yet having been received.

The number of accidents in which compensation or medical aid was paid during the year was 56,189 as compared with 54,298 during 1935. The 56,189 accidents resulted in 299 deaths, 30 permanent total disability cases, 584 permanent partial disability, 25,712 temporary disability cases and 29,564 medical aid cases.

During 1936 total compensation awarded amounted to $4,585,156.43, of which $3,553,282.23 was in Schedule 1 industries, $537,860.89 in Schedule 2 cases and $494,013.31 in Crown cases. There was also paid for medical aid in Schedule 1 during the year the sum of $1,058,642.36 making the total benefits awarded during the year $5,643,798.79 compared with total benefits of $5,314,112.87 in 1935 and $4,499,707.23 in 1934. The cost of medical aid in Schedule 2 cases and Crown cases is furnished by the employer.

Assessments.—Assessments in Schedule 1 are in the form of a percentage of pay roll and the average rate or percentage over all the classes actually paid by the employers can be ascertained by relating the total assessments to the total wage expenditure. This, on the provisional figures gives an average rate of assessment for 1936 of $1.50 on every $100 of pay roll. The average over all years since the commencement of the Act was $1.19.

The total assessments in all classes of Schedule 1 for the year 1936, including estimated adjustments amounted to $6,379,129.19. In assessments are included collections for default in making returns or payments and interest for under or over estimate of payroll. Other income and credits amounted to $44,796.58, the total income and credits for the year being $6,423,925.77. The estimated total wage expenditure in Schedule 1 industries for the year 1936, calculated on provisional figures is reported as being $425,603,000 compared with $373,112,000 in 1935.

Employers in Schedule 2 industries are assessed their share of the expense of administration amounting, during the year reviewed, to $26,616.04 as compared with $22,800.86 in 1935, and $23,074.66 in 1934. Proportionate to the amount of compensation awarded, administration expenses in Schedule 2 and Crown cases were 5·80 per cent in 1936, as compared with 8·07 per cent in 1935, and 8·88 per cent in 1934.

Compensation.—The compensation for Schedule 1 industries for the year, including an estimate for what is still to be awarded for accidents happening during the year, amounted to $3,920,411.49; disbursements in respect to medical aid, also including an estimate for what is outstanding, amounted to $1,046,311.28; administration expenses for Schedule 1, including $13,555.06 for mine rescue work, amounted to $326,479.10; and $151,443.75 was paid to employers' safety associations. The total expenditures and charges for the year amounted to $5,444,645.62, while the provisional surplus for the year was $979,280.15. The balance forwarded from prior years was a surplus of $2,090,119.60, which, added to the surplus for the year less the carryover for prior years' claims amounting to $980,340.59, makes a net provisional surplus of $2,089,059.16 at December 31, 1936.

The total amount of compensation awarded in Schedule 2 industries and Crown cases during 1936 was $1,031,874.20. Of this amount, $281,958.49 was for workmen of municipal corporations; $198,173.34 for steam railroads; $6,365.42 for electric railways; $43,136.34 for navigation companies; $1,010.04 for express and sleeping car companies; $7,038.51 for telephone and telegraph companies, and $178.75 for all other industries in Schedule 2; $282,866.34 for Dominion Crown cases and $211,146.97 for Provincial Crown cases. Of the total amount awarded, $627,577.08 was for pensions in pension cases, and $404,297.12 was for compensation non-pension cases.

Administration.—The report shows that administration expenses have been reduced by $7,567.25 below those of 1935. The gross administration expenses during 1936 were $388,403.24, which included special statistical services for which refunds were received amounting to $11,077.13, making the total administration expenses, $377,326.11 as compared with $384,893.36 during 1935. The

employers pay the whole of the expenses of the administration of the Act. The amount is divided according to the number of accidents handled among Schedule 1 (Accident and Silicosis Funds) Schedule 2 and Dominion and Provincial Crown.

The total administration expenses for 1936 less expenses of supervising work in connection with silicosis, rehabilitation and mine rescue stations (not properly administrative work) and handling claims for silicosis were 6·61 per cent of benefits awarded, being 6·78 per cent of benefits awarded in Schedule 1 and 5·80 per cent in Schedule 2 and Crown cases.

Safety Associations.—Total payments to safety or accident prevention associations during 1936 amounted to $151,443.75 divided as follows: Lumberman's Safety Association, $19,955; Ontario Pulp and Paper Makers' Safety Association, $13,000; Class 5 Accident Prevention Association $11,500; Industrial Accident Prevention Associations, $103,000; Electrical Employees' Association of Ontario, $3,988.75. Payment for mine rescue work in 1936 amounted to $13,555.06 and for rehabilitation clinics, $8,216.72.

Funds.—The Schedule 1 funds are known and referred to in the Act as the "Accident Fund." The report states that they comprise, in addition to current funds out of which temporary payments of compensation, medical aid, and administration expenses are paid, the Pension Fund, Disaster Reserve, and Compensation Deferred. The standing of the Accident Fund as at December 31, 1936, showed a balance of assets in excess of liabilities at that date of $2,868,779.41, being $270,501.44. Disaster Reserve, $2,089,059.16 standing at the credit of the classes December 31, 1936, and $509,218.81 reserve for depreciation of securities.

The pension fund representing the outstanding pension liability, comprises the largest part of the funds standing to the credit of Schedule 1. It had a balance at the end of the year of $21,460,847.44.

The Disaster reserve fund set aside to meet any unforeseen disaster or other circumstance which might unduly burden the employers in any class of industry showed a balance at December 31, 1936, of $270,501.44.

The funds included under "Compensation deferred" comprise compensation moneys held at interest for claimants in Schedule 1, payment being deferred to a future time by reason of the claimant being a minor or for other reasons. At the end of the year there was a balance of $36,967.17.

The report also contains detailed information concerning operations during 1935, which was not available when the report for that year was made. This section of the report gives the final financial statement for Schedule 1 industries for 1935, estimates of the adjustments of assessments and of the outstanding compensation and medical aid having to be used in the provisional statement given in the 1935 report. Statistical information is also given regarding the accidents happening during 1935, their causes, the nature of the injuries suffered, the number, time loss, total and average cost of the different classes of cases, and the age, wage, nationality, and marital condition of the injured workmen.

Alberta

The nineteenth annual report of the Workmen's Compensation Board of Alberta reveals a further increase in the number of accidents during 1936, there being 12,381, an increase of 1,323 compared with the number reported for 1935. There was, however, a decrease in the number of fatalities during 1936, there being 39 compared with 59 in 1935. Ninety-one accidents resulted in permanent disability and 12,251 in temporary disability. The total cost of compensation, including provisions for claims pending at December 31, 1936, medical aid, expenditures in connection with mine rescue cars, and provision for disasters amounted to $1,296,881.50. Revenue from assessments, medical aid contributions, interest, etc., amounted to $1,287,218.38, leaving an excess of expenditure over a revenue of $9,663.12 for the year ended December 31, 1936.

Assessments.—During 1936, employers contributed $868,630.43 to the Accident Fund through assessments levied upon the wages paid to their workmen as compared with $842,664.35 for the year 1935. Outstanding assessments as at December 31, 1936, were $100.214.79 as compared with $98.792.71 at the end of the preceding year. Contributions from workmen for the Medical Aid Fund amounted to $248,568.68 as compared with $236,651.07 for 1935.

Administration.—The cost of administration in 1936 including the cost of maintaining mine rescue cars and stations, and the administration of the Electrical Protection Act was $113,373.34, compared with $116,031.35 in 1935.

Funds.—During 1936, there was a sum of $331,267.01 awarded in pensions, and the report shows that the total amount to the credit of the Pension Reserve Fund at the end of the year was $3,216,074.36. Payments from this fund for the year under review amounted to $456,386.81.

The medical aid fund reserve for the year amounted to $56,169.96. The cost of medical services, hospitalization, etc. was $262,801.12, contributions and interest on this account amounting to $252,477.09 which with provision of $21,026.20 for administration expenses left an expenditure, in excess of revenue of $31,350.23.

Statistics.—Statistics for the year reviewed by the report are as follows:—

Number of employers within the scope of the Act as at December 31, 1936, 4,935; number of accidents reported during the year 1936, 12,381; number of accidents and claims not finally disposed of as at December 31, 1935, 784; number of claims disposed of by award of pension or payment of compensation, 4,834; number of claims disposed of by payment of account for medical aid, 4,230; number of accidents disposed of for which no application for compensation was received, 145; number of accidents disposed of on which no compensation was due, 2,100; number of claims on which further payments have to be made, 1,031; number of accidents awaiting further reports and on which no payments have been made, 825.

"Falling objects or bodies" was again the most frequent cause of accidents and accounted for six of the fifty-nine fatalities.

The time loss in non-fatal claims amounted to 213,074 days. The average time loss in permanent disability cases was 98·76 days and in temporary disability cases 34·78 days. The average age of injured workmen was 37·32 years. The number of accidents to minors under 20 years of age was 692 and to those 60 years or over, 313.

As usual, the report also contains references to the work carried on by the Mine Rescue and First Aid Branches at various centres including details of the number of men given training and the extent and condition of equipment in use at the various stations.

The annual review of the administration of the Electrical Protection Act is also included in the report a continued improvement during 1936 being recorded both in sales of equipment and appliances, and in employment in all branches of the industry.

British Columbia

Indicative of the improvement in employment conditions the twentieth annual report of the Workmen's Compensation Board of British Columbia states that "more than one-half of the decline in gross payrolls following the peak year 1929 has been regained." The report further states that 1935 payrolls were nearly 30 per cent higher than 1933 payrolls.

As a further indication of improving business conditions the report shows that the number of employers operating at the end of 1936, had increased; the net increase on the number of operating firms in 1936 over 1935 being 358.

Accidents and Claims.—The increase in the number of workmen employed in 1936 is reflected in the number of accidents which occurred during the year; there being 13 per cent more claims filed in 1936 than in the preceding year. The number of accidents recorded in each of the past ten years was as follows: 30,066 in 1927; 32,793 in 1928; 36,750 in 1929; 33,285 in 1930; 25,877 in 1931; 19,101 in 1932; 18,274 in 1933; 22,354 in 1934; 26,280 in 1935; and 29,677 in 1936. Fatal accidents reported during these years were as follows: 219 in 1927; 251 in 1928; 253 in 1929; 277 in 1930; 125 in 1931; 106 in 1932; 97 in 1933; 116 in 1934; 146 in 1935; and 168 in 1936 (which number includes 16 fatalities in one railway disaster). In addition, the report states, there were several thousand minor accidents reported which necessitated no expenditure either for time-loss or medical attention, first aid alone being given.

During the twenty years that the Workmen's Compensation Act has been in effect in British Columbia, 493,938 claims have been filed or an average of 24,697 per year. Of these claims, 3,955 were with respect to fatal accidents or an average of 198 per year. At the close of 1936 there were on the pension list as a result of these fatal accidents, 908 widows, 872 children, 115 dependent mothers, 27 dependent fathers, and 16 other dependents. As a result of 11,858 accidents occurring during the last 20 years, involving permanent disability, 1,841 workmen were in receipt of pension in December, 1936. With respect to both the fatal and non-fatal claims, 3,779 persons were in receipt of regular monthly pensions at the end of 1936. The report also states that at any given time there are in addition about 2,000 workmen in receipt of time-loss compensation for temporarily disabling injuries.

Time-loss cases in 1936 arose out of the various classes of industry as follows: lumber industry, 46 per cent; general manufacturing and delivery classes, 14 per cent; metal-mining, 9 per cent; coal-mining, 5 per cent; construction work, 5 per cent; railroading groups, 4 per cent; municipal work, 3 per cent; and all other classes, 14 per cent. The fatal cases arose as follows: Lumber industry, 39 per cent; railroading groups, 16 per cent;

metal-mining, 12 per cent; coal-mining, 5 per cent; construction work, 5 per cent; general manufacturing and delivery classes, 5 per cent; municipal work, 3 per cent; all other classes, 15 per cent.

Sixty-six per cent of those injured claimed British or Canadian nationality, and 51 per cent of those injured were married. There were 171 women injured in industry during the year.

Revenue and Disbursements.—Revenue for the year reviewed by the report totalled $5,752,631.11 of which $4,253,453.83 represented collections made during 1936 from the following sources: From employers, assessments and interest, $3,075,317.97; from employers, medical aid, $381,335.65; from employers, silicosis, $891.37; from workmen, medical aid dues, $256,922.50; interest on investments, $466,087.40; appreciation on investments sold $29,294.91; transferred to Contingent Fund, $43,604.03.

Disbursements made during 1936 included $1,209,586.66 paid in compensation to workmen, $595,894.06 for medical aid, that is, physicians' fees, hospital expenses, drugs, etc. From the reserve account, $1,149,770.71 was paid in pensions during 1936, while $614,828.82 was invested for pensions, and $87,870.23 was set aside as cash available for pensions.

Accident Prevention.—Referring to accident prevention, the report states that "during the past year the Board has continued a vigorous campaign in accident-prevention; two full-time inspectors are devoting their efforts to the lumbering industry in advising on and supervising this work. Through regular inspections, circulars to employers, and in educational and safety talks by Board members and inspectors, the necessity of constant watchfulness and careful practices in industry has been stressed. . . .

"Years ago faulty guards, no guards, poor or inadequate equipment were the main causes of accidents, but to-day the real cause is recognized as the human element. To meet this, there must be proper supervision through the management, superintendents, and foremen. The workmen will respond to the movement for safety-consciousness on the proper representations from those in authority. The movement cannot be sold from the bottom up; it must be sold from the top down. Employers should have the same concern for safety as for production. Accident-prevention is now recognized as a production problem; therefore the same energy and thought that is applied to the solution of production problems should be applied to reducing human suffering and loss through accidents.

"Thoughtful employers have co-operated willingly in this work, but by comparing accident figures for this with those of the previous year it is apparent that still greater efforts must be made. To the extent that accident costs are reduced, to that extent will assessment rates be reduced. The rate of assessment is the evidence of the accident cost. All employers should conduct a more vigorous accident-prevention campaign this year if real results are to be obtained."

First Aid.—The report refers to the redrafting of first-aid requirements. All employers, the report states are now required to have first-aid equipment readily available wherever men are employed. It is also stated that the advantage of prompt first-aid service for all injuries however slight, is becoming more apparent both to workmen and to their employers.

Silicosis.—The report also refers to amendments passed to the "Workmen's Compensation Act" on November 20, 1936, compensation for cases of disablement on or after January 1, 1936. By amendment to the "Metalliferous Mines Regulation Act" provision was made for the periodical examination of workmen engaged in the metalliferous mining industry.

A decrease in the number of fatalities arising from the use of explosives is reported for the calendar year 1936 in the annual report issued by the Explosives Division of the Bureau of Mines, Department of Mines and Resources. There were 169 accidents reported for the year reviewed, resulting in 31 fatalities and 177 persons being injured. In classifying the causes of the fatalities 29 were attributed to circumstances arising from the use of explosives, 8 of which were due to premature explosions, and 6 to "hangfires, and returning too soon to the shothole." Playing with detonators resulted in one fatality and the cause of the other fatality was listed as "various."

Ten sugar refineries in Canada reported a capital investment of $33,199,993 and a gross value of production of $40,405,397 during 1936, according to a report issued by the Dominion Bureau of Statistics. These establishments, the report states, employed 2,559 persons who received $3,413,698 in salaries and wages, and paid out $27,924,998 for raw materials, while the value added by manufacture amounted to $11,430,093.

MINIMUM WAGES IN BRITISH COLUMBIA AND SASKATCHEWAN

Recent Orders of Provincial Boards

British Columbia

The British Columbia Board of Industrial Relations has recently issued Order No. 46 and Order No. 47 under the Female Minimum Wage Act and the Male Minimum Wage Act, respectively, establishing a minimum wage in the fruit and vegetable industry.

These Orders, which came into effect on July 12, rescind previous orders issued in April, 1935. As these Orders differ considerably from those previously in effect they are given in detail.

Order No. 46—*establishing a minimum wage for females in the fruit and vegetable industry.*

1. That where used in this Order the expression "fruit and vegetable industry" means and includes the work of females engaged in canning, preserving, drying, packing, or otherwise adapting for sale or use any kind of fruit or vegetable or seed.

2. That the minimum wage on a time-rate basis for every female employee in the fruit and vegetable industry (not included in any other Order of the Board), with the exceptions provided by section 3 hereof, shall be not less than:—

(*a*) The sum of thirty cents (30c.) per hour for every hour up to ten (10) hours in any one day: Provided, however, that such employee in any one day shall be paid less than the sum of ninety cents (90c.):

(*b*) The sum of forty-five cents (45c.) per hour for every hour in excess of ten (10) hours and up to twelve (12) hours in any one day:

(*c*) The sum of sixty cents (60c.) per hour for every hour in excess of twelve (12) hours in any one day:

Provided that, in every case where any employee's regular rate of pay is in excess of the rate prescribed in subsection (*a*) hereof, no deduction shall be made from such regular rate to be applied to wages due for working overtime in excess of ten (10) hours in any one day, and in no case shall the rate of pay for hours in excess of ten (10) in any one day be less than the rates fixed in subsections (*b*) and (*c*) hereof, respectively.

3. That, provided when (but not until) an employer has paid ninety per centum (90%) of his female employees in the fruit and vegetable industry on a time-rate basis at a rate or rates not less than the rates fixed by subsections (*a*), (*b*), or (*c*) of section 2 hereof, he may then pay the other or others of his female employees (inclusive of handicapped female employees in respect of whom permits must have been obtained under section 5 of the said Act) at a lesser rate or rates, but in no case shall such lesser rate or rates be less than:—

(*a*) The sum of twenty-five cents (25c.) per hour for every hour up to ten (10) hours in any one day: Provided, however, that no such employee in any one day shall be paid less than the sum of seventy-five cents (75c.):

(*b*) The sum of thirty-seven and one-half cents (37½c.) per hour for every hour in excess of ten (10) hours and up to twelve (12) hours in any one day:

(*c*) The sum of fifty cents (50c.) per hour for every hour in excess of twelve (12) hours in any one day:

Provided, that, in every case where any employee's regular rate of pay is in excess of the rate prescribed in subsection (*a*) hereof, no deduction shall be made from such regular rate to be applied to wages due for working overtime in excess of ten (10) hours in any one day, and in no case shall the rate of pay for hours in excess of ten (10) in any one day be less than the rates fixed in subsections (*b*) and (*c*) hereof, respectively.

4. That when wages are paid on a piece-rate basis instead of on a time-rate basis the wages paid to every female employee in the fruit and vegetable industry shall be not less than the respective rates to which she is entitled under this Order.

5. That after not more than five (5) consecutive hours' employment every female employee in the fruit and vegetable industry shall be given at least one (1) hour free from duty: Provided, however, that if a petition in writing signed by at least seventy-five per centum (75%) of his female employees requesting a shorter period free from duty is received by any employer, he may, with the approval of the said Board, grant such petition, but in no case shall the period free from duty be less than half an hour.

Order No. 47—*establishing a minimum wage for males in the fruit and vegetable industry.*

The chief provisions of this order are as follows:—

1. That where used in this Order the expression "fruit and vegetable industry" means and includes all operations in or incidental to the canning, preserving, drying, packing, or otherwise adapting for sale or use any kind of fruit or vegetable or seed.

2. That the minimum wage on a time-rate basis for every male employee twenty-one (21) years of age or over in the fruit or vegetable industry (not included in any other Order of the Board) shall be not less than:—

(*a*) The sum of thirty-eight cents (38c.) per hour for every hour up to ten (10) hours in any one day: Provided, however, that no such employee in any one day shall be paid less than the sum of one dollar and fourteen cents ($1.14).

(*b*) The sum of fifty-seven cents (57c.) per hour for every hour in excess of ten (10) hours and up to twelve (12) hours in any one day:

(*c*) The sum of seventy-six cents (76c.) per hour for every hour in excess of twelve (12) hours in any one day:

Provided that, in every case where any employee's regular rate of pay is in excess of the rate prescribed in subsection (*a*) hereof, no deduction shall be made from such regular rate to be applied to wages due for working overtime in excess of ten (10) hours in any one

day, and in no case shall the rate of pay for hours in excess of ten (10) in any day be less than the rates fixed in subsections (*b*) and (*c*) hereof, respectively.

3. That the minimum wage on a time-rate basis for every male employee under the age of twenty-one (21) years employed in the fruit and vegetable industry shall be not less than:—

(*a*) The sum of twenty-eight cents (28c.) per hour for every hour up to ten (10) hours in any one day: Provided, however, that no such employee in any one day shall be paid less than the sum of eighty-four cents (84c.).

(*b*) The sum of forty-two cents (42c.) per hour for every hour in excess of ten (10) and up to twelve (12) hours in any one day:

(*c*) The sum of fifty-six cents (56c.) per hour for every hour in excess of twelve (12) hours in any one day:

Provided that, in every case where any employee's regular rate of pay is in excess of the rate prescribed in subsection (*a*) hereof, no deduction shall be made from such regular rate to be applied to wages due for working overtime in excess of ten (10) hours in any one day, and in no case shall the rate of pay for hours in excess of ten (10) in any one day be less than the rates fixed in subsections (*b*) and (*c*) hereof, respectively.

The same provisions as are contained in sections 4 and 5 of the preceding Order (No. 46) are also applicable to this Order.

Order No. 47, governing the employment of males, has the following section which does not appear in Order No. 46.

"That the aggregate number of male employees under the age of twenty-one (21) years employed in any plant or establishment in the fruit and vegetable industry at the rates specified in section 3 hereof shall not exceed fifteen per centum (15%) of the whole number of male employees of any age in that plant or establishment."

CANCELLATION OF ORDER NO. 45A (SECTION 7) GOVERNING CONSTRUCTION INDUSTRY.

The British Columbia Board of Industrial Relations also gazetted the cancellation of section 7 of Order No. 45A establishing a minimum wage in the construction industry.

This section provided for the Order coming into effect on July 5.

Saskatchewan

The *Saskatchewan Gazette* of July 31, 1937, contains four new Orders of the Minimum Wage Board of Saskatchewan.

Order No. 1 governing the employment of persons in shops in the cities of the Province and within a radius of five miles thereof, replaces former Order No. 1 (LABOUR GAZETTE, November, 1936, page 999). Order No. 2 governing employment in laundries, dyeworks, tailoring, fur sewing, dressmaking and millinery establishments in the cities of the Province and within a five mile radius replaces former Order No 2 (LABOUR GAZETTE, November, 1936, page 1000). Order No. 3 concerns the employment of persons in factories, garages and automobile service stations in the same areas as the other orders. This new order replaces former Order No. 3 (LABOUR GAZETTE, November, 1936, page 1000). Order No. 4 governs the employment of persons in hotels, restaurants and refreshment rooms and replaces former Order No. 4 (LABOUR GAZETTE, February, 1935, page 153).

ORDER NO. 1.—*Governing employment of persons in shops in the Cities of the Province and within a radius of five miles thereof.*

1. INTERPRETATION:

(*a*) Shop: In this Order "shop" means a building or portion of a building, booth, stall or place where goods are exposed or offered for sale by retail or by wholesale and includes:

(i) A Mail Order house, a warehouse, a cartage, draying, transfer or delivery service, and a place where the trade or business carried on is that of a tobacconist or newsagent, and sale by retail includes sale by auction.

(ii) Not only the part of a building or place in which the goods are exposed or offered for sale by retail or wholesale, but also all other parts thereof used in connection with the sale of goods by retail or wholesale.

(*b*) Wages: "wage" or "wages" means any compensation for labour or services, paid to or retained by, or partly paid to and partly retained by, a worker in a shop to which this Order applies whether measured by time, piece, commission or by any other method whatsoever.

(*c*) Application of Order: This Order applies to every person employed in or about a shop.

2. WAGES:

(*a*) Minimum rates of wages are set herein for a maximum of 48 hours per week, or for the usual number of hours normally worked per week in the establishment, if less than 48, and more than 43.

(*b*) Experienced workers: Experienced workers shall be paid at a rate of wages not less than $14 per week, except such employees who are wholly engaged in delivery on foot or bicycle, in which case the rate of wages shall not be less than $8 per week.

(*c*) Inexperienced workers: Inexperienced workers shall be paid:

(i) Not less than $6 per week for the first 6 months:

(ii) Not less than $8 per week for the second 6 months:

(iii) Not less than $10 per week for the third 6 months:

(iv) Not less than $12 per week for the fourth 6 months:

and thereafter shall be considered as experienced workers and shall be paid not less than the minimum rate above prescribed for experienced workers.

(*d*) Part-Time Workers:

(i) Wages at not less than the minimum hourly rate applicable shall be paid to part-time workers providing that no employee working less than 43 hours shall be paid at a rate of wages less than twenty cents (.20) per hour and provided further that no earning period shall be less than three consecutive hours.

(ii) The number of workers employed for less than 43 hours in any week shall not exceed 25 per cent of the total number of workers regularly employed in the establishment except that, where there are four or less full time workers, one part-time worker may be employed.

(*e*) Overtime Workers: Wages at not less than the minimum hourly rate applicable shall be paid for all time worked beyond 48 hours in any one week, provided that in no case shall the hours of labour exceed fifty-six (56) in any one week, unless a special permit in writing has been obtained from the Secretary of the Board.

(*f*) Restriction in the Number of Inexperienced Workers: No employer shall suffer or permit to be employed as inexperienced workers in any establishment, more than 33⅓ per cent of the total number of his employees in that establishment, excepting when the total number of employees is less than four, in which case one inexperienced worker may be employed.

(*g*) Indentured Apprentices: If an Indenture of Apprenticeship has been entered into under the terms of which the employer, during a specified period of not less than one year, undertakes to see that an employee is taught a skilled trade, and the employee undertakes to learn the trade, the wages stipulated in the indenture may supersede the rates set in this Order, provided a copy of the indenture is filed with and approved by the Minimum Wage Board.

(*h*) Holidays: No reduction for Statutory Holidays shall be made from the Minimum Wage.

3. Register:

Every employer shall keep in each shop a register of the names and addresses, the working hours and actual earnings of all his employees working therein.

4. Penalty:

Any employer who violates any of the provisions of this Order is punishable by fine and in default by imprisonment. (*See* Minimum Wage Act.)

5. Commencement of Order:

This Order shall come into force on the eighteenth day of August, 1937, and shall supersede all Orders of the Board respecting shops.

Order No 2.—*Governing employment of persons in Laundries, Dyeworks, Tailoring, Fur Sewing, Dressmaking and Millinery Establishments in the Cities of the Province and within a radius of five miles thereof.*

1. Wages:

"Wage" or "Wages" means any compensation for labour or services paid to or retained by, or partly paid to and partly retained by, a worker in a laundry, dyeworks, tailoring, fur sewing, dressmaking or millinery establishment to which this Order applies, whether measured by time, piece, commission or by any other method whatsoever.

(*a*) The minimum rates of wages as set herein are for a maximum of forty-eight (48) hours per week, or for the usual number of hours normally worked per week in the establishment if less than 48 and more than 43.

(*b*) Experienced Workers: Experienced workers shall be paid at a rate of wages not less than $13 per week.

(*c*) Inexperienced Workers: Inexperienced workers shall be paid:

(i) Not less than $7 per week for the first 6 months:

(ii) Not less than $9 per week for the second 6 months:

(iii) Not less than $11 per week for the third 6 months:

and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate above prescribed for experienced workers.

(*d*) Overtime and Part Time Workers: Wages at not less than the following minimum hourly rates applicable shall be paid to part-time and overtime workers provided that in the case of part-time workers no earning period shall be less than two consecutive hours:

(i) Experienced workers not less than 30 cents per hour.

(ii) Inexperienced workers not less than 25 cents per hour.

The number of workers employed for less than 43 hours in any week shall not exceed 25 per cent of the total number of workers regularly employed in the establishment except that, where there are four or less full time workers, one part-time worker may be employed.

(*e*) Restriction in the Number of Inexperienced Workers: No employer shall suffer or permit to be employed as inexperienced workers in any establishment, more than 33⅓ per cent of the total number of his employees in that establishment, excepting when the total number of employees is less than four, in which case one inexperienced worker may be employed.

(*f*) Indentured Apprentices: If an Indenture of Apprenticeship has been entered into under the terms of which the employer, during a specified period of not less than one year, undertakes to see that an employee is taught a skilled trade, and the employee undertakes to learn the trade, the wages stipulated in the indenture may supersede the rates set in this Order, provided a copy of the indenture is filed with and approved by the Minimum Wage Board.

(*g*) Holidays: No reduction for Statutory Holidays shall be made from the Minimum Wage.

This Order came into force on the 18th day of August, superseding all former orders of the Board governing employment in these establishments.

Order No. 3.—*Governing employment of persons in Factories, Garages and Automobile Service Stations in the Cities of the Province and within a radius of five miles thereof.*

1. "Factory" means:

(*a*) Any building, workshop, structure or premises of the description mentioned in Schedule "A" of The Factories Act;

(*b*) Any premises, building, workshop, structure, room or place wherein or within the precincts of which steam, water or other mechanical power is used to move or work machinery employed in preparing, manufacturing or finishing any article, substances, material, fabric or compound or incidental thereto, or is used to aid the manufacturing process carried on therein;

(*c*) Any other premises, building, workshop, structure, room or place wherein the employer of the persons working therein has the right of access or control and in which or within the precincts of which manual labour is exercised by way of trade or for the purposes of gain in or incidental to the following purposes or

any of them, that is to say: the making of any article or part of an article; the alteration, repair, ornamentation or finishing of any article or adapting it for sale.

2. WAGES:

"Wage" or "Wages" means any compensation for labour or services paid to or retained by, or partly paid to and partly retained by, a worker in a factory, garage or automobile service station to which this Order applies, whether measured by time, piece, commission or by any other method whatsoever.

(*a*) Minimum rates of wages are set herein for a maximum of forty-eight hours per week, or for the usual number of hours normally worked per week in the establishment if less than forty-eight.

(*b*) Experienced Workers: Experienced workers shall be paid at a rate of wages not less than $12 per week.

(*c*) Inexperienced workers shall be paid: Not less than $7 per week for the first six months; Not less than $9 per week for the second six months; Not less than $11 per week for the next six months, and thereafter shall be considered experienced workers, and shall be paid not less than the minimum rate above prescribed for experienced workers.

(*d*) Part Time: Wages at not less than the following hourly rates applicable shall be paid to all employees working on a part time basis:

(i) Experienced workers not less than thirty cents per hour.

(ii) Inexperienced workers not less than twenty-five cents per hour.

Provided that no period of employment shall be less than two consecutive hours.

(*e*) Overtime: Wages at not less than the following minimum hourly rates applicable shall be paid to overtime workers for all time worked beyond forty-eight hours in any one week:

(i) Experienced workers not less than thirty cents per hour.

(ii) Inexperienced workers not less than twenty-five cents per hour.

(*f*) Restriction in Number of Inexperienced Workers: No employer shall suffer or permit to be employed as inexperienced workers in any establishment more than 33⅓ per cent of total number of employees in that establishment, excepting when the total number of employees is less than four, in which case one inexperienced worker may be employed.

(*g*) Indentured Apprentices: If an indenture of apprenticeship has been entered into under the terms of which the employer during a specified period of not less than one year undertakes to see that an employee is taught a skilled trade, and the employee undertakes to learn the trade, the wages stipulated in the indenture may supersede the rates set in this Order, provided a copy of such indenture is filed with and approved by the Minimum Wage Board.

This Order came into force on August 18.

ORDER No. 4.—*Governing employment of persons in Hotels, Restaurants and Refreshment Rooms in the Cities of the Province, and within a radius of five miles thereof.*

1. INTERPRETATION:

(*a*) "Hotel" includes a boarding house or rooming house in which there are more than five beds set apart for the use of boarders or lodgers;

(*b*) "Restaurant" means any place in which meals are supplied daily, for a consideration, to more than five persons;

(*c*) "Wages": Wage or wages means any compensation for labour or services paid to or retained by, or partly paid to and partly retained by a worker in a hotel, restaurant or refreshment room to which this Order applies, whether measured by time, piece, commission or by any other method whatsoever.

(*d*) Application of Order: This Order applies to every person employed in or about a hotel, restaurant or refreshment room.

2. WAGES:

(*a*) Minimum rates of wages are set herein for a maximum of 48 hours per week or for the usual number of hours normally worked per week in the establishment, if less than 48.

(*b*) Experienced Workers: Experienced workers shall be paid at a rate of wages not less than $12 per week (25c. per hour) except for bell boys, porters, elevator operators, dish or pot washers, in which case the rate of wages shall not be less than $10 per week (21c. per hour).

(*c*) Inexperienced Workers: Inexperienced workers shall be paid at a rate of wages not less than $8 per week (16⅔c. per hour) for the first six months and not less than $10 per week (21c. per hour) for the second six months and thereafter shall be considered experienced workers and shall be paid not less than the maximum rate above prescribed for experienced workers.

(*d*) In all cases where a special uniform other than white is required and not supplied by the employer, all rates of wages as set out in this Clause and Clause Three (Board and Lodging) shall be increased by fifty (50) cents per week.

(*e*) Part Time and Overtime Workers: Wages at not less than the following hourly rates applicable shall be paid to part-time and overtime workers, provided that in the case of part-time workers no earning period shall be less than two consecutive hours.

(i) Experienced workers not less than 30c. per hour.

(ii) Inexperienced workers not less than 25c. per hour.

The number of workers employed for less than 48 hours in any week shall not exceed 25 per cent of the total number of workers regularly employed in the establishment except that, where there are four or less full time workers, one part-time worker may be employed.

(*f*) Restriction in the Number of Inexperienced Workers: No employer shall suffer or permit to be employed as inexperienced workers in any establishment, more than 33⅓ per cent of the total number of his employees in that establishment, excepting where the total number of employees is less than four, in which case one inexperienced worker may be employed.

3. BOARD AND LODGING:

(*a*) Where twenty-one (21) meals per week and seven (7) days' lodging per week are furnished and charged for by the employer and accepted by the employee as part payment of wages, the minimum rate of wages shall not be less than $5.50 per week for experienced workers and not less than $3.50 per week for experienced bell boys, porters, elevator operators, dish or pot washers; not less than $1.50 per week for workers of less than six months' experience and not less than $3.50 per week for workers of more than six and less than twelve months' experience.

(*b*) Where meals only are furnished and charged for by the employer and accepted by the employee, the minimum rate of wages shall be not less than $7.50 per week for experienced workers and not less than $5.50 per week for

experienced bell boys, porters, elevator operators, dish or pot washers; not less than $3.50 per week for workers with less than six months' experience; not less than $5.50 per week for workers of more than six and less than twelve months' experience.

(*c*) Where lodging only is furnished and charged for by the employer and accepted by the employee, the minimum rate of wages shall be not less than $10 per week for experienced workers and not less than $8 per week for experienced bell boys, porters, elevator operators, dish or pot washers; not less than $6 per week for workers with less than six months' experience; not less than $8 per week for workers of more than six and less than twelve months' experience.

(*d*) Where less than twenty-one (21) meals or seven (7) days' lodging are furnished, by arrangement, in any week, the minimum rate of wages for that week shall be the minimum rate applicable under this clause plus a sum amounting to not less than twenty cents (20) for each meal and thirty cents (30) for each days' lodging which is not furnished.

This Order came into force on August 18.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1937

Reports received from the offices of the Employment Service of Canada during the quarter April to June, 1937, indicated an increase of nearly 23 per cent both in vacancies listed and placements effected, when a comparison was made with the business transacted during the corresponding quarter of 1936. All groups, except farming, in which a fairly heavy decline was recorded, showed increased vacancies and placements over the second quarter of 1936, the highest gains being in construction and maintenance, logging, services and manufacturing; much smaller increases being registered in transportation, mining and trade. Provincially, the Maritimes, Quebec, Ontario and British Columbia reported a larger volume of work effected than during the corresponding quarter of last year, while the Prairie Provinces recorded declines, Ontario showing the highest gain and Saskatchewan the greatest loss.

From the chart on page 889 which accompanies the article on the work of the Employment Offices for the month of June, 1937, it will be seen that the curve of vacancies and of placements in relation to applications declined about one point during the first half of April, then followed a marked upward trend until the middle of May, when a downward course was again manifested; throughout June, however, the curves once more rose and at the end of the quarter had attained levels about 9 points higher than those recorded at the close of June a year ago. During the period April to June, 1937, there was a ratio of 60·2 vacancies and 55·2 placements for each 100 applications for employment, as compared with 54·7 vacancies and 50·2 placements during the corresponding period last year.

The average number of positions offered daily during the quarter under review was 1,350, of applications registered 2,245, and of placements effected 1,240, was compared with a total daily average of 1,132 vacancies, 2,070 applications and 1,040 placements in regular and casual employment during the second quarter of 1936.

During the three months April to June, 1937, the offices of the Service reported that they had made 97,750 references of persons to positions and had effected a total of 94,234 placements, of which 65,655 were in regular employment and 28,579 in casual work. Of the placements in regular employment, 51,967 were of men and 13,688 of women, while casual work was found for 15,546 men and 13,033 women. A comparison with the same quarter of 1936 showed that 76,924 placements were then effected, of which 45,668 were in regular employment and 31,256 in casual work. Applications for employment during the period under review were received from 130,665 men and 39,897 women, a total of 170,562, in comparison with a registration of 153,162 persons during the same period of 1936. Employers notified the Service during the second quarter of 1937 of 102,595 positions, of which 68,235 were for men and 34,360 for women, as compared with 83,755 opportunities for employment offered during the corresponding period of 1936.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June, 1937.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JUNE, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on July 1 was 10,271, the employees on their payrolls numbering 1,134,318 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June was 1,807, having an aggregate membership of 198,262 persons, 10·4 per cent of whom were without employment on July 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of July, 1937, as reported by Employers

The general industrial situation showed further marked improvement at the beginning of July, according to information received by the Dominion Bureau of Statistics from 10,271 employers, whose staffs aggregated 1,134,318 persons, as compared with 1,088,652 in the preceding month. This increase of 45,666 considerably exceeded that recorded at July 1, 1936, and was also decidedly greater than the average gain between June 1 and July 1 in the preceding sixteen years for which statistics are available. Reflecting this advance, the index, based on the 1926 average as 100, rose from 114·3 at June 1, to 119·1 at the latest date; this was higher than at the beginning of July in any other year of the record except 1929. The index, when adjusted for seasonal variation, also increased, standing at 114·9 at July 1, compared with 112·6 at the beginning of June of the present year.

The unadjusted indexes at July 1 in the seventeen years for which data are available are as follows: 1937, 119·1; 1936, 104·6; 1935, 99·5; 1934, 101·0; 1933, 84·5; 1932, 88·7; 1931, 103·8; 1930, 118·9; 1929, 124·7; 1928, 117·7; 1927, 109·7; 1926, 105·0; 1925, 98·0; 1924, 97·1; 1923, 100·7; 1922, 92·2, and 1921, 88·6.

Employment in manufacturing showed continued advances, contrary to the usual seasonal trend at July 1; the most marked gains over June 1 were in food, lumber and pulp and paper factories. Logging, mining (except of coal), communications, services, transportation, trade and construction and maintenance also indicated substantial improvement. The increase in each of these considerably exceeded the average gain indicated at July 1 in the years, 1921-1936. On the other hand, there were losses of a seasonal character in certain manufacturing industries, notably in leather, textile and iron and steel plants, while there was a minor decline in coal-mining.

The firms furnishing statements for July 1 of last year had numbered 9,744, and their employees had aggregated 987,955, an increase of approximately 24,600 over their June 1, 1936, staffs. Improvement had then been indicated in most of the main industrial groups.

Employment by Economic Areas

The trend was decidedly upward in all five economic areas; the largest percentage increases occurred in the Maritime Provinces, but, numerically, those in Quebec and Ontario were greater. The index number of employment in each of the economic areas was higher than at the same date of last year, or of most years of the record.

Employment statistics are now being separately prepared for each of the provinces in the Maritime and the Prairie areas; it is not possible to give the data by industries, nor for the past months, but the general indexes for these provinces are shown in the text under the appropriate heading.

Maritime Provinces.—Statements were tabulated from 723 firms employing 98,060 workers,

as against 88,038 in the preceding month. This increase, which took place in Nova Scotia and New Brunswick, brought the index to 135·8, or over 24 points higher than at the beginning of July in 1936, when the gain over the preceding month had been much smaller; in fact, the advance at the latest date was decidedly greater than that indicated at July 1 in any preceding year of the record except 1930. Highway construction reported the most pronounced improvement at the date under review, but there were also important additions to staffs in lumber, vegetable food and pulp and paper mills, and in logging, mining, communications, railway and building construction and maintenance and services. On the other hand, animal food, chemical and iron and steel factories were slacker, the losses being partly seasonal in character.

The following table shows index numbers for each of the Maritime Provinces in the months for which data have been prepared (1926 = 100):—

Province	Relative Weight	Index Numbers July 1 1937	June 1 1937
Prince Edward Island..	1·5	79·7	82·0
Nova Scotia..	54·2	138·3	124·3
New Brunswick..	44·3	136·1	121·4
Maritimes.	100·0	135·8	122·0

The 685 employers in the Maritime Provinces whose returns were included in the employment survey for July 1, 1936, had reported 80,055 workers; as already stated, employment was then in less volume than at the date under review.

Quebec.—Manufacturing, on the whole, showed further improvement in Quebec, there being increases in lumber, pulp and paper, electric light and power, iron and steel, non-ferrous metal and electrical apparatus factories; leather and textile plants, however, showed seasonal curtailment. In the non-manufacturing industries, services, logging, transportation and construction reported considerably heightened activity. In the last-named, the greatest gains were in work on the highways, although building and railway construction were also much busier. The general advance in this province during the month exceeded that indicated at July 1 in any other year of the record, except 1933, when the percentage gain was larger, although the number obtaining work was smaller. The forces of the 2,444 co-operating employers aggregated 328,614 persons, compared with 316,196 at June 1, or an addition of 12,418. Employment at the beginning of July was more active than in any other month since December 1, 1929. Standing at 118·0 at the latest date, the index was over sixteen points

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

higher than at July 1, 1936, when the 2,298 firms making returns had employed 281,041 persons, or some 5,000 more than in the preceding month.

Ontario.—Activity continued to increase in Ontario, where the 4,538 firms whose statistics were tabulated reported 475,745 employees, or 13,172 more than at June 1. Employment at July 1 in previous years has usually though not invariably advanced as compared with the preceding month, the average change being a moderate increase; the gain noted at the date under review was considerably above the average, and was also larger than that indicated at the same date in 1936, when the index ws sixteen points lower. The improvement at July 1, 1937, was fairly widely distributed, food, lumber, pulp and paper, rubber, electrical apparatus and non-metallic mineral product factories, mining, transportation, services, trade and construction showing considerable gain. The increases in construction were greatest, occurring mainly in the highway division. On the other hand, leather, textile and iron and steel works were seasonally slacker.

The 4,296 employers furnishing statistics for July 1, 1936, had reported 409,031 workers, as compared with 402,888 in the preceding month.

Prairie Provinces.—The most important expansion recorded in this area was in construction and maintenance work on the highways, but railway and building construction, services, trade, transportation, communications, mining and manufacturing also showed gains; those in the last-named took place largely in the food, electric light and power and iron and steel groups. On the other hand, logging was seasonally slacker. Data were compiled from 1,469 employers with an aggregate staff of 132,494 workers at July 1, as against 126,535 in their last return. This gain of 5,959 workers decidedly exceeded the average increase at July 1 in the last sixteen years. The index, at 104·0 at the date under review, compared favourably with that of 101·9 at July 1, 1936, when the 1,415 co-operating firms reported 129,134 employees, as compared with 123,756 at June 1, 1936. The following shows the employment index numbers in

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

Jan. 1, 1937	103·8	109·5	104·0	107·5	94·2	95·4
Feb. 1	104·1	107·5	106·7	108·4	91·4	91·3
Mar. 1	102·8	106·6	102·5	108·9	91·3	89·2
April 1	103·0	105·4	102·2	108·8	89·4	97·5
May 1	106·3	110·7	105·2	111·2	93·2	103·4
June 1	114·3	122·0	113·6	118·8	99·3	112·2
July 1	119·1	135·8	118·0	122·2	104·0	117·1
Relative Weight of Employment by Economic Areas as at July 1, 1937	100 0	8·6	29·0	41·9	11·7	8·8

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

each of the provinces in this area as at June 1 and July 1, 1937 (1926 = 100):—

Province	Relative Weight	Index Numbers July 1 1937	Index Numbers June 1 1937
Manitoba	46·3	100·3	97·4
Saskatchewan	21·9	110·2	103·9
Alberta	31·8	105·7	99·4
Prairies	100·0	104·0	99·3

British Columbia.—Continued advances were made in British Columbia; the increase brought the index to 117·1, or more than twelve points higher than at July 1 of last year. A total working force of 99,405 persons was employed at the date under review by the 1,097 firms whose data were received, and who had 95,310 on their staffs at the beginning of June. Manufacturing (particularly of animal food and lumber products) was seasonally busier at July 1, 1937, and metallic ore mining, communications, transportation, building and highway construction and trade also reported considerable improvement, while curtailment was indicated in coal-mining. As already stated, the employment situation was better than at the same date in 1936, being also more favourable than in the summer of other years since 1929. The 1,050 establishments reporting for July 1, 1936, had employed 88,694 men and women, an increase of 2,195 over their staffs in the preceding month.

Table 1 gives index numbers by economic areas.

Employment by Cities

Seven of the eight centres for which separate tabulations are made—Quebec, Montreal, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver—showed heightened activity, while the tendency was seasonally downward in Windsor. The largest gains were in Winnipeg and Vancouver. Employment in each of these eight cities was better than at July 1 in any of the preceding five years.

Montreal.—Employment in Montreal showed a moderate advance from the preceding month, mainly in services, transportation and construction. On the other hand, manufacturing and trade were slacker; within the former, leather, food and textile plants reported lowered activity. A combined working force of 158,509 men and women was indicated by the 1,405 co-operating employers, who had

Relative Weight of Employment by Cities as at July 1, 1937	14·0	1·3	12·0	1·3	3·3	1·8	3·7	3·3

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

158,048 workers at June 1. A small decrease had been noted at July 1, 1936, when 1,327 firms had employed 140,177 persons; the index was then several points lower, standing at 93·5 as compared with 105·5 at the latest date.

Quebec.—A further increase was reported in Quebec City, where statements were tabulated from 179 firms with 14,204 employees, compared with 13,569 in the preceding month. Employment in services, manufacturing and construction advanced, while other industries showed little general change. The index was higher than at the beginning of July, 1936, a general decline having then been shown by the 172 employers whose data were received, and whose payrolls aggregated 12,570.

Toronto.—There was continued improvement in industrial activity in Toronto at July 1, when construction and trade were brisker. Little change on the whole was shown in other divisions. The 1,540 establishments furnishing data enlarged their staffs by 949 workers to 136,277 at the beginning of July. At the same date of last year, the 1,462 co-operating firms had increased their working forces by 457 persons, to 124,560; the July 1, 1936, index stood at 101·4, compared with 109·5 at the latest date.

Ottawa.—Statistics were received from 204 employers with 15,249 persons on their paylists, or 402 more than in the preceding month. There were general increases in manufacturing and construction, while trade was also slightly more active. A smaller gain had been indicated at July 1, 1936, when 190 establishments had reported 14,401 employees. Employment then was quieter than at the date under review.

Hamilton.—There was a further advance in Hamilton, where 658 workers were added to the forces of the 289 concerns furnishing information, bringing them to 37,478 at the beginning of July, 1937. Manufacturing reported improvement, notably in the food, textile and electrical appliance divisions, while other industries showed little general change. For July 1 of last year 284 returns were tabulated showing a combined working force of 31,972 men and women; activity was then at a lower level.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES
(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
July 1, 1921	88·6	87·6	63·9	96·5	92·3	92·0	77·7	90·2	92·0

June 1	114·3	117·9	109·1	151·9	85·6	86·7	105·2	129·0	131·5
July 1	119·1	119·0	125·0	153·6	88·0	89·4	128·5	137·5	133·4
Relative Weight of Employment by Industries as at July 1, 1937	100·0	53·3	3·1	6·3	2·1	9·5	13·5	2·6	9·6

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Windsor.—A decline of 449 was reported in the staffs of the 178 co-operating employers, who had 20,458 in their employ at the date under review; the loss took place mainly in iron and steel plants, while construction afforded more employment. The index was considerably higher than at July 1, 1936, when a much larger contraction had been indicated; the payrolls of the 170 establishments furnishing data had then included 15,348 employees.

Winnipeg.—Manufacturing, transportation, construction and trade registered moderate advances, those in the first-named occurring mainly in iron and steel and food factories. An aggregate working force of 42,525 persons was reported by the 482 co-operating firms; this was 1,163 more than at June 1. The improvement noted at the same date of a year ago had involved a smaller number of persons, and the index of employment then was lower, standing at 92·7, as compared with 99·2 at July 1, 1937. The reports tabulated at the beginning of July last summer, numbering 476, had shown a staff of 39,861 men and women.

Vancouver.—The trend of employment in Vancouver continued favourable, according to information from 450 establishments employing 37,069 workers, as against 35,760 in the preceding month. There were increases in all groups except manufacturing, which showed little general change; the gains in transportation and construction were most pronounced. Expansion on a smaller scale had been recorded by the 432 concerns making returns for July 1, 1936, whose employees had numbered 34,042. Employment was then in smaller volume than at the latest date.

Index numbers by cities are given in table 2.

Employment by Industries

Manufacturing.—Employment in manufacturing at July 1 showed a further substantial increase, which, however, was rather smaller

Table IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Average 1926=100)

Industries	[1]Relative Weight	July 1, 1937	June 1, 1937	July 1, 1936	July 1, 1935	July 1, 1934	July 1, 1933	July 1, 1932

Miscellaneous	·6	144·8	138·8	132·3	123·8	116·0	98·7	99·8

[1] The "Relative Weight" column shows the porportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

than that indicated at the same date of 1936; in nine of the preceding sixteen years for which data are available, the trend in factory work had been upward at the beginning of July, while in the remaining seven years curtailment had been noted. The 5,977 establishments making returns at the latest date reported 604,936 employees, as compared with 599,366 at June 1. The unadjusted index rose from 117·9 in the preceding month to 119·0 at July 1, 1937, while the seasonally-corrected index also showed an advance, from 114·7 at June 1, to 115·9 at the date under review; both crude and adjusted indexes were higher than at July 1 in any other year since 1920, except 1929.

An analysis of the data for July 1, 1937, shows pronounced improvement in the animal and vegetable food, lumber and pulp and paper groups, with smaller gains in the tobacco, beverage, clay, glass and stone, electric current, electrical apparatus, non-ferrous metal, non-metallic mineral product and miscellaneous manufacturing industries. On the other hand, leather, iron and steel and textile plants were seasonally slacker, the greatest losses being in the last-named.

At July 1 in the years for which data are available, the unadjusted indexes in manufacturing are as follows: 1937, 119·0; 1936, 104·7; 1935, 98·5; 1934, 93·8; 1933, 83·0; 1932, 85·4; 1931, 97·2; 1930, 111·3; 1929, 120·3; 1928, 113·1; 1927, 106·8; 1926, 103·1; 1925, 96·4; 1924, 94·9; 1923, 101·3; 1922, 91·1, and 1921, 87·6.

The manufacturers furnishing statistics at July 1, 1936, had numbered 5,749, and their employees had aggregated 529,292, which was an increase of 6,750 over the preceding month.

Animal Products, Edible.—Additions to staffs were recorded in this group, 896 persons being taken on by the 325 establishments making returns, which had 27,522 in their employ. Considerable improvement was noted in fish-canning in British Columbia, and there were also gains in dairies. The index at July 1, 1937, was several points higher than at the same date in 1936, although a larger increase had then been indicated.

Leather and Products.—Statements were received from 303 manufacturers in this division, employing 23,369 workers, as compared with 24,240 in the preceding month. The bulk of this seasonal decrease took place in boot and shoe factories, and occurred mainly in Quebec and Ontario. The general situation was better than that recorded at July 1 of last year, a somewhat smaller decline had then been reported.

Lumber and Products.—Rough and dressed lumber mills showed substantially heightened activity, and employment in container factories was also brisker. The general increase was not so large as that noted at July 1, 1936, when the index stood at 86·8, as against 99·4 at July 1, 1937. A combined working force of 53,121 employees was reported by the 885 firms co-operating at the date under review; this was 2,245 more than at the beginning of June. All provinces except the Prairies shared in the upward movement, but the gains in Ontario were greatest.

Musical Instruments.—Employment in musical instrument works slightly increased at July 1; 35 manufacturers employed 1,609 persons, or 34 more than in the preceding month, while the situation was also more favourable than at the beginning of July, 1936.

Plant Products, Edible.—The resumption of operations in fruit and vegetable canneries caused an important advance, which greatly exceeded that registered at July 1 of a year ago, when the index was nearly seven points lower. Returns were received from 483 manufacturers of vegetable foods, having 34,927 operatives, as against 32,836 in their last report. The improvement took place largely in Ontario.

Pulp and Paper Products.—There was a moderate decline in printing and publishing houses, while pulp and paper mills were busier. The 614 co-operating employers in the Dominion reported 69,271 workers, compared with 68,079 at June 1. A similar gain had been indicated in the group as a whole at July 1, 1936; the index of employment was then over eleven points lower.

Rubber Products.—Little general change was registered in rubber factories, in which employment was brisker than in the summer of last year. Statistics were tabulated from 55 firms with 13,914 employees at the date under review, as compared with 13,881 in the preceding month.

Textile Products.—A further and larger contraction was reported by the 1,090 co-operating textile manufacturers, who employed 108,769 workers, or 2,288 fewer than at the beginning of June. The greatest losses were in woollen, silk, headwear and garment and personal furnishing factories, and occurred mainly in Quebec and Ontario. A much smaller decline had been indicated at the corresponding date in 1936, but the level of employment was then lower than at the date under review. The decrease was seasonal in character, the tendency having been downward at July 1 in twelve of the sixteen preceding years for which statistics are available.

Tobacco, Distilled and Malt Liquors.—Employment in this division showed a moder-

ate increase, according to data from 186 establishments employing 16,786 persons, compared with 16,638 in the preceding month. A gain of a similar size had been noted at the same date last year, when the index was over eleven points lower.

Chemicals and Allied Products.—There was a slight decline in activity in chemical factories; 205 firms had 12,758 employees, compared with 12,851 at June 1. The Maritime Provinces reported most of the reduction in staffs. A larger loss had been shown at the beginning of July, 1936, and employment was then in smaller volume.

Clay, Glass and Stone Products.—Further improvement was indicated in building material plants, the 207 co-operating establishments enlarging their forces by 205 persons to 11,247 at the date under review. There were moderate but fairly general gains throughout the Dominion. The level of employment was higher than at July 1 of a year ago, when the trend was also upward.

Electric Light and Power.—An increase was registered in electric current plants, 96 of which reported a combined working force of 15,671 persons, as against 15,085 at the beginning of June. The index was nearly six points higher than at the same date in 1936, when a similar gain had been indicated.

Electrical Apparatus.—There was an increase of 751 in the staffs of the 125 manufacturers furnishing data, who had 20,514 employees at July 1. Firms in Ontario reported the greatest improvement. The number engaged in the production of electrical apparatus was much larger than at July 1 in the preceding year, when a smaller advance had occurred.

Iron and Steel.—For the first time this year, the trend in iron and steel factories was downward; the losses, which were seasonal in character, were on a much smaller scale than those indicated at July 1 of a year ago, when employment was not nearly so active. Improvement at the date under review was noted in the general plant machinery, agricultural implement, heating appliance, iron pipe, sheet meal and some other groups, while the automobile and other vehicle, crude, rolled and forged, wire and wire products and other divisions showed contractions. Returns were compiled from 873 employers whose forces aggregated 144,820 workers, as against 145,358 in the preceding month.

Non-Ferrous Metal Products.—A further increase was registered in non-ferrous metal products, mainly in the base metal groups. The 173 co-operating manufacturers employed 25,714 operatives, or 670 more than in the preceding month. A larger gain had been reported at the same date of last year, but the index was then decidedly lower.

Mineral Products.—Continued improvement was shown in this division, in which the index, at 155·5, was many points higher than in July, 1936. Statistics were received from 144 employers whose staffs rose from 15,392 at June 1, 1937, to 15,644 at July 1.

Logging

There was a considerable increase in logging, 4,472 persons being added to the staffs of the 339 reporting firms, who employed 35,694 at July 1. The advance was mainly due to river-driving operations in Quebec. A decline had been noted at the same date in 1936, when the index of employment was decidedly lower.

Mining

Coal.—There was a small seasonal decrease in employment in coal mines, 104 of which employed 22,553 men, as compared with 22,611 in their last report. There were gains in the Maritime Provinces, while lowered activity was indicated in the British Columbian coal fields. A decline of much the same size had been noted at July 1 of last year; the employment index was then fractionally higher.

Metallic Ores.—Another advance was reported in metallic ore mines; statements were tabulated from 226 operators employing 38,355 persons, or 585 more than at June 1. Most of the improvement occurred in Ontario. The general index, at 312·9, was many points higher than at July 1, 1936.

Non-Metallic Minerals, other than Coal.—There was a further increase in the payrolls of the 89 co-operating non-metallic mineral mines, which employed 10,052 workers, or 174 more than in the preceding month. Employment was much brisker than at the beginning of July a year ago, although a larger gain had then been made.

Communications

Continued improvement was indicated in this group, according to the reporting companies and branches, which had 23,501 persons on their payrolls, compared with 22,873 at June 1. Employment on both telephones and telegraphs was more active. A similar increase had been recorded at July 1, 1936, but the level of employment in this division was then lower.

Transportation

Street Railways and Cartage.—Activity in the local transportation group showed an increase, 244 firms having 27,099 workers in their employ, as against 26,619 in the preceding

month. A rather smaller advance had been noted at the same date in 1936, when the index was somewhat lower.

Steam Railways.—Statistics tabulated from 99 companies and divisional superintendents in the steam railway operation group showed that they employed 62,117 workers at the beginning of July, or 1,410 more than in the preceding month; improvement was shown in all but the Maritime Provinces. Expansion on a smaller scale had taken place at July 1 of last year, when employment was slightly below its level at the time of writing.

Shipping and Stevedoring.—There was a further increase in employment in water transportation, 111 companies having enlarged their staffs by 1,371 employees, bringing them to 18,255 at July 1. The index stood at 100·6, compared with 98·7 at the beginning of July, 1936, when a smaller gain had been recorded. At the date under review, there were advances in the Maritime Provinces, Quebec, Ontario and British Columbia.

Construction and Maintenance

Building.—Continued improvement in employment was noted in building construction, comparing favourably with the decrease in personnel indicated at July 1, 1936; activity in this group was then at a lower level. The 756 co-operating contractors employed 28,517 workers, as compared with 24,040 in the preceding month. Expansion was noted in all five economic areas, that in Quebec and Ontario being most pronounced.

Highways.—The number of men engaged on road construction and maintenance largely increased at the date under review, when the 376 employers furnishing data had 88,188 employees, or 19,910 more than at the beginning of June. While there were considerable advances in all provinces, those in the Maritimes and Ontario were greatest. Employment in this group was brisker than at July 1, 1936, when the indicated gains were on a smaller scale.

Railways.—A combined working force of 35,998 persons was reported by the 38 contractors and divisional superintendents whose statistics were tabulated, and who had 32,699 employees at June 1. All provinces except British Columbia shared in the increase. Much larger additions to staffs were noted at July 1 a year ago, and the index then was between seven and eight points higher than at the date under review, when it stood at 89·9.

Services

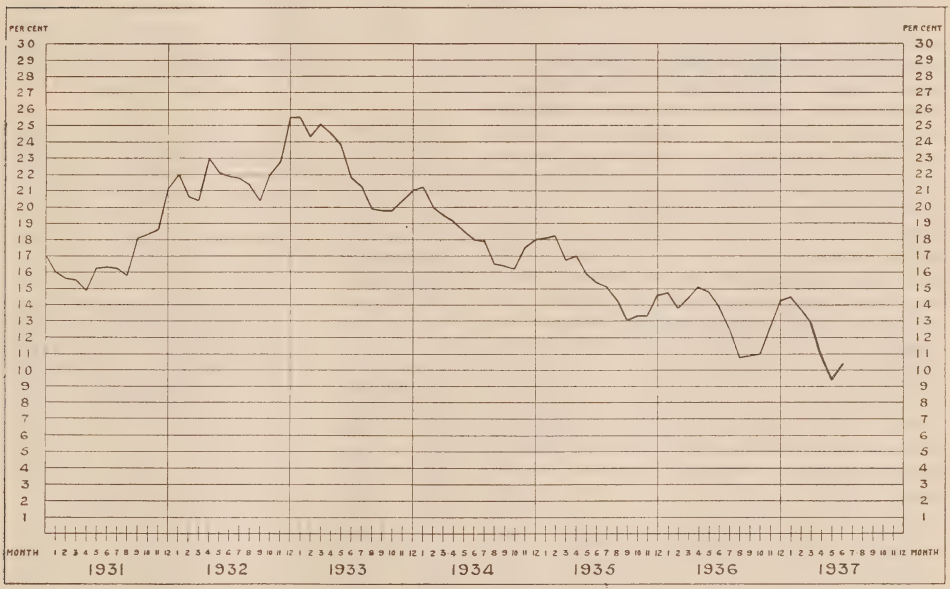
Continued expansion was shown in the service group, according to returns from 477 employers with 29,986 persons on their staffs, as compared with 28,116 in the preceding month. The opening of the summer-hotel season caused most of the improvement, which was not quite so extensive as that reported at July 1, 1936; employment then, however, was in less volume. The tendency at the date under review was favourable in all provinces, the largest increases being in Quebec and the Prairie Provinces.

Trade

The trend of employment in wholesale and retail trade was upward, the gain in personnel in the latter, especially, being marked. Statements were tabulated from 1,352 firms having 109,067 employees, as against 107,589 at the beginning of June, 1937. Employment was in greater volume than at the same date last summer, when little general change had been indicated by the co-operating trading establishments.

Tables

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated areas or industry is of the total number of employees reported in Canada at the date under review.



(2) Unemployment in Trade Unions at the Close of June, 1937

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle due to illness are not considered as unemployed, while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There was a slight tendency toward retarded activity among local trade union members, at the close of June from the previous month according to the returns tabulated from 1,807 labour organizations involving a membership of 198,262 persons. Of these, 20,522 or 10·4 per cent were without employment on the last day of the month, contrasted with a percentage of 9·5 in May. A more favourable situation was reflected than in June of last

year, when 13·9 per cent of idleness was recorded. Nova Scotia unions, due to somewhat better conditions in the coal mines, indicated a slightly higher level of employment than in May, and in New Brunswick, Manitoba and Saskatchewan, the trend was also upward, though the variations from the previous month were quite small. In British Columbia some slowing up in activity in the transportation industries was the determining factor in the decline of over 2 per cent reported from that province. The metal trades in Quebec and the garment trades in Ontario caused the percentage of unemployment in

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

these provinces for June to be slightly above those of May, while in Alberta fractional recessions were apparent. Compared with the returns for June, 1936, Ontario unions showed the greatest improvement during the month reviewed, particularly in building and construction operations, and in New Brunswick, Quebec, Manitoba and British Columbia more moderate gains were apparent. Increases in activity of minor importance were noted by Nova Scotia and Alberta unions. Saskatchewan was the only province to show some lessening in the volume of work afforded from June a year ago.

The records of unemployment among local trade union members in the largest city in each province, with the exception of Prince Edward Island, are tabulated separately each month. Montreal and Toronto unions during June each registered a drop in activity from May of over 4 per cent, while in Halifax, Regina and Vancouver, the changes were quite slight, though adverse. In Winnipeg and Edmonton fractional gains occurred. Saint John unions reflected the same percentage of idleness as in May. When contrasted with the reports for June, 1936, Saint John members were considerably busier during the month reviewed, and noteworthy employment advancement was evident among Toronto members. Lesser gains were registered by Winnipeg and Vancouver unions, and in Halifax the trend was nominally better. Some falling off in activity, however, was apparent among Regina, Montreal and Edmonton members.

The chart which appears with this article, shows the trend of unemployment by months from January, 1931, to date. In June the level of the curve was slightly above that of May, an indication of retarded activity on a small scale. In this upward trend of June, the curve has pursued a contrary course to that which has been indicated during the previous four months, when the tendency of the curve was consistently in a favourable direction. A greater employment prevalence however was manifest by the curve during June than in the corresponding month of last year.

The manufacturing industries recorded an increase in idleness of over 3 per cent during June from the preceding month, quietness in the Ontario garment trades and Quebec metal trades influencing largely the percentage for the group as a whole adversely. June reports were forwarded by 514 unions in the manufacturing industries, with a total of 70,295 members, of whom 8,388 or 11·9 per cent were without employment on the last day of the month, as compared with a percentage of 8·2 in May. Conditions were, however, somewhat better than in June a year ago, when unemployment stood at 13·7 per cent. In addition to the recessions evident in the garment and metal trades from May, glass workers and meat cutters and butchers, reported large percentage losses in employment which, however, affected few persons as their combined membership was small. Among leather, and hat, cap and glove workers, metal polishers, and bakers and confectioners, moderate curtailment of activity was noted, brewery, and cigar and tobacco workers, and printing tradesmen, showing but slight declines in work afforded. General labourers, on the contrary, were considerably better engaged than in the previous month and the tendency for paper makers, wood, textile and carpet, and jewellery workers, was toward increased employment though the variations from May were quite small. Decidedly better conditions than in June of last year prevailed for hat, cap and glove workers, and metal polishers, and improvement of noteworthy degree was reflected by leather, jewellery, wood, and cigar and tobacco workers, general labourers, and bakers and confectioners. Lesser gains in activity were apparent among printing tradesmen, textile and carpet, iron and steel, and brewery workers. Large increases in slackness, however, were registered by glass and fur workers, and meat cutters and butchers, while among paper makers some employment cessation was noted. In the garment trades the percentage of idleness remained identical with that reported in June of last year.

Some improvement in the coal mining situation was indicated at the close of June from the previous month, the 50 unions from which reports were tabulated with 17,480 members showing 14·1 per cent of idleness contrasted with 15·7 per cent in May. The level of activity was also slightly above that of June last year when 15·0 per cent of the members reported were out of work. Nova Scotia, Alberta and British Columbia unions all participated in the favourable employment movement noted from May, the gains in Nova Scotia being the most pronounced. In contrasting with the returns for June of last year in the coal mining industry, British Columbia members were mainly responsible for the better trend noted during the month reviewed, though in Alberta also, some slight advancement was reflected. In Nova Scotia, however, the situation was unchanged from that of June last year. In addition to the members reported as unemployed a number were shown as working at considerably reduced time.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	**3·4**

A slight rise in work afforded building and construction tradesmen was indicated at the close of June from the previous month according to the reports compiled from 198 associations, combining a membership of 20,861 persons. Of these, 5,127 or a percentage of 24·6 were idle at the close of the month contrasted with a percentage of 26·4 in May. Marked improvement, however, was shown from June, 1936, when 40·5 per cent of unemployment was reported. Bridge and structural iron workers, hod carriers and building labourers, and steam shovelmen all registered noteworthy percentage gains in employment from May, which did not affect the percentage for the group as a whole to any great extent as their membership was small. Conditions for carpenters and joiners, granite and stone cutters, and plumbers and steamfitters were moderately better than in May, and among bricklayers, masons and plasterers, and electrical workers, slight employment expansion was reflected. A large drop in activity, however, was noted by tile layers, lathers and roofers, from May, and among painters, decorators and paperhangers, there was some falling off in available work. Employment recovery in substantial measure from June of last year was registered by steam shovelmen, bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters, plumbers and steamfitters, tile layers, lathers and roofers, and hod carriers and building labourers. Increased activity on a much smaller scale, though noteworthy, were apparent among electrical workers. Some curtailment in employment available to painters, decorators and paperhangers, however, was manifest from June last year.

Employment conditions in the transportation industries were slightly more favourable during June than in either the preceding month or June, 1936, as manifest by the 795 reporting unions with a membership aggregate of 62,311 persons. Of these, 3,246 or 5·2 per cent were out of work at the end of the month in comparison with percentages of 5·7 in May and 6·3 in June, 1936. In the steam railway division, which embraced over 76 per cent of the entire group membership reported in the transportation industries, there was a slight tendency toward increased employment from May, and in the navigation division considerably heightened activity was apparent. Street and electric railway employees, however, showed some falling off in work afforded from May, while among teamsters and chauffeurs, no variation was apparent in the level of employment for these two months. As in the previous comparison, steam railway employees and navigation workers maintained an improved situation during June over the corresponding month of last year, while activity for street and electric railway employees subsided slightly. Employment for teamsters and chauffeurs was, however, in somewhat greater volume than in June last year.

The three associations of retail shop clerks making returns during June and covering a membership of 1,025 persons, indicated that all members were at work as in May contrasted with an unemployment percentage of 3·5 in June last year.

The situation for civic employees showed little variation during June from the previous month, unemployment standing at 0·8 per cent compared with 0·6 per cent in May. This was apparent from the reports compiled from 74 associations with 8,642 members. In June a year ago 2·0 per cent of idleness was recorded.

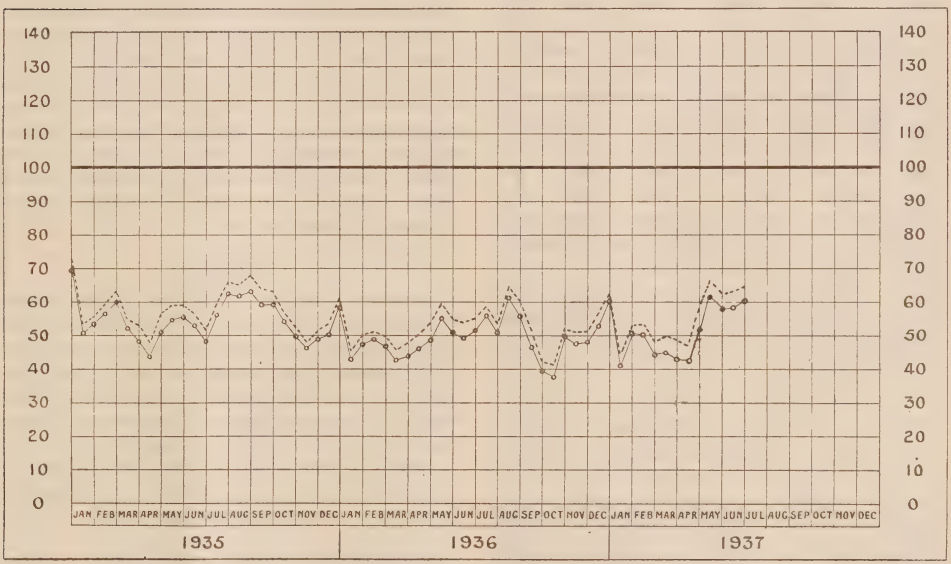
In the miscellaneous group of trades increased activity on a small scale was reflected during June from the previous month and improvement of greater magnitude was evident from June, 1936. Reporting for June were 135 organizations involving 7,921 members, of whom 530 were out of work on the last day of the month, a percentage of 6·7 contrasted with 7·7 per cent in May and 10·2 per cent in June last year. Hotel and restaurant, and theatre and stage employees, stationary engineers and firemen, and unclassified workers all contributed in small measure to the advance recorded from May. Among barbers approximately the same volume of work was accorded as in the preceding month. When contrasted with the returns for June, 1936, stationary engineers and firemen, hotel and restaurant, and theatre and stage employees showed rather noteworthy gains in activity during the month reviewed, and among barbers a slightly better trend was manifest. Curtailment of employment of moderate proportions was evident among unclassified workers.

The three unions of fishermen, from which reports were received during June, with 601 members showed that 0·8 per cent were without work on the last day of the month compared with 0·3 per cent in May and 1·7 per cent in June, 1936.

There was little change in the level of activity for lumber workers and loggers during June from the previous month, unemployment standing at 1·6 per cent as compared with a percentage of 1·5 in May. The percentage for June was based on the returns compiled from 2 associations, including a membership of 896 persons. Improvement on a small scale was manifest from June of last year when 3·8 per cent of idleness was recorded.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1936 inclusive, and also the percentage of unemployment by provinces for June of each year from 1919 to 1934 inclusive, and for each month from June, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for June, 1937



The volume of business transacted by the offices of the Employment Service of Canada during the month of June, 1937, as indicated by the average daily placements effected, was about 7 per cent less than that of the previous month, but 25 per cent above that of the corresponding month a year ago. Total placements in June, however, were higher than in May, as there were two more working days in the former period. Substantial gains over the preceding month were recorded in construction and maintenance and farming, but these were almost entirely offset by a heavy loss in logging and in services and a minor decline in trade. Manufacturing, also, showed a moderate increase and mining one of smaller volume. In comparison with June, 1936, all industrial divisions, except farming, in which only a small loss was shown, reported increased placements, the highest gain being in construction and maintenance, followed by others, not so large, in logging, manufacturing and services, minor increases only being effected in trade, transportation and mining.

The accompanying chart shows the trend of employment from January, 1935, to date, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications rose gradually throughout June and at the end of the period under review were about 9 points above the levels recorded at the close of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 63·2 during the first half and 64·7 during the second half of June, 1937, in comparison with ratios of 53·9 and 55·1 during the corresponding periods of 1936. The ratio of placements to each 100 applications during the same periods were 58·5 and 60·3 in comparison with 49·2 and 51·4, respectively.

The average number of vacancies reported daily by employers to the offices of the Ser-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - Placements o—o—o—o—o—o

vice throughout Canada during June, 1937, was 1,401, as compared with 1,501 in the preceding month and with 1,127 during June of last year.

The average number of applications for employment received daily by the offices during the month under review was 2,189, in comparison with 2,329 in May and 2,067 in June, 1936.

The average number of placements made daily by the offices of the Service during the month under review was 1,300, of which 942 were in regular employment and 358 in work of one week's duration or less, as compared with a total daily average of 1,390 during the preceding month. Placements in June, 1936, averaged 1,039 daily, consisting of 646 placements in regular and 393 in casual employment.

During the month of June, 1937, the offices of the Service referred 34,902 persons to positions and effected a total of 33,794 placements. Of these, the placements in regular employment numbered 24,484, of which 19,971 were of men and 4,513 were women, while placements in casual work totalled 9,310. The number of vacancies reported by employers was 25,628 for men and 10,783 for women, a total of 36,411, while applications for work totalled 56,903, of which 43,979 were from men and 12,924 from women. Reports for May, 1937, showed 36,016 positions available, 55,881 applications made, and 33,351 placements effected, while in June, 1936, there were recorded 28,164 vacancies, 51,674 applications for work and 25,958 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927, to date:—

Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937 (5 months)	117,926	50,637	168,563

Nova Scotia

There was a decrease of over 21 per cent in the number of positions offered through Employment Offices in Nova Scotia during June when compared with the preceding month, but an increase of over 61 per cent in comparison with the corresponding month of last year. Placements were over 19 per cent less than in May, but nearly 64 per cent above June, 1936. With the exception of small declines in trade and transportation, all industrial divisions showed gains in placements over June of last year, the largest increases being in construction and maintenance, in which there were 718 placements; in logging, where 114 placements were made, and in services, with 475 placements: of the latter, 338 were of household workers. During the month 728 men and 107 women were placed in regular employment.

New Brunswick

Employment opportunities, as indicated by orders received at Employment Offices in New Brunswick during June, were over 18 per cent better than in the preceding month and nearly 39 per cent in excess of the corresponding month of last year. There was an increase also in placements of 18 per cent when compared with May and of nearly 45 per cent in comparison with June, 1936. Except for a small reduction in the manufacturing industries, all groups showed increases in placements over June of last year. The largest gains were in logging and services. Placements by industrial divisions included manufacturing, 43; logging, 211; construction and maintenance, 75; trade, 39, and services, 690, of which 496 were of household workers. There were 302 men and 122 women placed in regular employment.

Quebec

Positions offered through Employment Offices in the Province of Quebec during June were nearly 3 per cent less than in the preceding month, but nearly 48 per cent above the corresponding month of last year. There was a decrease of nearly 1 per cent in placements when compared with May, but an increase of nearly 53 per cent in comparison with June, 1936. The increase in placements over June of last year was almost entirely made up of a gain in the highway division of construction and maintenance, as fairly substantial additions in manufacturing and farming were largely offset by declines in services and logging. Of the minor changes in all other groups, the majority showed improvement. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 363; logging, 131; farming, 213; construction and maintenance, 2,647; trade, 108, and services, 2,205, of which 1,805 were of household workers. Regular placements numbered 3,523 of men and 1,440 of women.

Ontario

Positions offered through Employment Offices in Ontario during June were 12 per cent higher than in the preceding month and over 38 per cent above the corresponding month of last year. There was an increase also in placements of nearly 10 per cent when compared with May and of over 33 per cent in comparison with June, 1936. All industrial divisions participated in the substantial increase in placements over June of last year, the most important gains being in construction and maintenance, logging, services, manufacturing and farming. Placements by industrial divisions included: manufacturing, 1,020; logging, 1,836; farming, 2,656; transportation, 169; construction and maintenance, 5,928; trade, 306, and services, 4,442, of which 2,648 were of household workers. There were 10,576 men and 1,582 women placed in regular employment during the month.

Manitoba

There was a decline of nearly 7 per cent in the number of positions offered through Employment Offices in Manitoba during June, when compared with the preceding month and of 3 per cent in comparison with the corresponding month of last year. Placements, however, were over 4 per cent higher than in May and over 20 per cent above June, 1936. The only change of importance in placements by industrial divisions, when compared with June of last year, was a gain in logging and accounted for the increase in the province as a whole. Of the changes in other groups, all of which were small, 5 divisions showed declines and in 4 improvement was reported. Placements by industrial divisions included: logging, 382; farming, 401; construction and maintenance, 434, and services, 594, of which 446 were of household workers. During the month 1,220 men and 237 women were placed in regular employment.

Saskatchewan

The demand for workers, as indicated by orders received at Employment Offices in Saskatchewan during June, was over 37 per cent greater than in the preceding month, but nearly 7 per cent less than during the corresponding month of last year. There was an increase of nearly 40 per cent in placements when compared with May, but a decline of 9 per cent in comparison with June, 1936. Farm placements were less than during June of last year and largely accounted for the decline under this comparison. Small decreases, however, were also reported in construction and maintenance and manufacturing, but these were largely offset by increases in transportation, trade and services. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 72; farming, 388; construction and maintenance, 803, and services, 740, of which 533 were of household workers. Regular placements numbered 1,101 of men and 375 of women.

Alberta

Orders received at Employment Offices in Alberta during June called for nearly 22 per cent fewer workers than in the preceding month and nearly 15 per cent less than during the corresponding month of last year. There was a decrease also in placements of nearly 21 per cent in comparison with May and of nearly 11 per cent when compared with June, 1936. A reduction in farm placements was mainly responsible for the decline from June of last year, although small losses were also reported in transportation and services. Placements in manufacturing and fishing were slightly higher than during the corresponding month of last year. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 86; farming, 423; construction and maintenance, 564, and services, 484, of which 314 were of household workers. There were 1,065 men and 300 women placed in regular employment.

British Columbia

During June, orders received at Employment Offices in British Columbia called for over 23 per cent less workers than in the preceding month, but nearly 25 per cent more than during the corresponding month of last year. Similar percentages of change were reported in placements under both comparisons. There was a substantial increase in placements in the highways division of construction and maintenance, when compared with June, 1936, which accounted for the gain for the province as a whole under this comparison. Minor improvement was also reported in mining, trade and farming. The only decline of importance was in logging, although small losses were also shown in manufacturing and services. Placements by industrial divisions included: manufacturing, 59; logging, 155; farming, 294; mining, 95; construction and maintenance, 2,090, and services, 761, of which 508 were of household workers. During the month 1,456 men and 350 women were placed in regular employment.

Movement of Labour

During the month of June, 1937, the offices of the Employment Service of Canada made 24,484 placements in regular employment,

Women	10,783	2,663	12,924	9,572	4,513	4,120	11,769	4,690

13,940 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,113 were granted the Employment Service reduced transportation rate, 828 proceeding to centres within the same province as the dispatching office and 285 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

In Quebec during June the Hull office assisted in the dispatch of 15 bushmen to employment in the Pembroke zone. Business transacted by Ontario offices during June involved the issue of 697 reduced rate certificates, 692 provincial and 5 interprovincial. The latter were issued to carpenters travelling from Sudbury to Rouyn. Within the province the Port Arthur office was responsible for the dispatch of 314 bush workers, 5 mine workers, 2 sawmill labourers, 2 hotel employees, 1 airport superintendent and 1 cafe waitress; the Fort William office of 114 bush workers and 3 hotel employees, and the Sudbury office of 61 bushmen to various sections within their respective zones. To the Fort William zone also, 6 miners were transferred from Timmins. On certificates secured at Toronto, 80 bushmen and 1 butcher were conveyed to Timmins, 33 bushmen to North Bay, 20 bushmen and 1 millwright to Sudbury, and 1 bushman to Pembroke. The North Bay zone was the destination of 14 bushmen travelling from Niagara Falls, 2 bushmen from Windsor and 1 mine cook from St. Catharines. From North Bay 27 bushmen proceeded to Timmins, 2 cookees to Sudbury and 1 highway shovel operator to Sault Ste. Marie. The labour movement in Manitoba during June originated at Winnipeg and comprised the transfer of 278 persons, 13 within the province and 265 to points outside. The provincial transfers were all for the Winnipeg zone and included 4 mine workers, 4 highway construction workers, 4 farm hands and 1 bushman. Of the persons travelling outside the province the Port Arthur zone received 252 bush workers, 2 mine carpenters, 1 tractor operator, 2 cooks and 1 hotel employee; the Timmins zone 4 carpenters, 1 cook and 1 cookee and the Yorkton zone 1 farm hand. Taking advantage of the Employment Service reduced transportation rate in Saskatchewan during June one farm hand journeyed from Saskatoon to a point within the same zone. Reduced rate certificates granted in Alberta during June totalled 109, all provincial. Travelling from Edmonton to employment within the territory covered by that city office were 30 fish company employees, 27 transportation workers, 15 highway construction workers, 8 bridge construction workers, 7 hotel employees, 6 bushmen, 4 miners, 2 farm hands, 2 oil refinery workers, 1 blacksmith, 1 carpenter, 1 housekeeper, 1 cookee and 1 waitress. From Edmonton, in addition, one sawmill engineer was transported to Calgary. The Calgary office dispatched one farm hand within its own zone and one farm hand to Edmonton. British Columbia transfers at the reduced rate during June were 13 in number and entirely to provincial centres. Of these, 12 were effected by the Vancouver office which shipped 1 mine labourer, 1 cook and 1 sawmill engineer to Kamloops, 1 hotel waitress and 1 mine worker to Nelson, 1 mine cook to Prince George, 1 mine fireman to Penticton and 3 cafe employees, 1 hotel waitress and 1 mine engineer within the Vancouver zone. To the Penticton zone, in addition, 1 farm hand was conveyed from Nelson.

Of the 1,113 persons who benefited by the Employment Service reduced rate during June 476 journeyed over the Canadian National Railways, 594 over the Canadian Pacific Railway, 33 over the Temiskaming and Northern Ontario Railway, 7 over the Northern Alberta Railway, and 3 over the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During June, 1937

The value of the building permits issued by 58 cities during June was $6,013,668; this was an increase of $614,179 or 11·4 p.c., as compared with the May total of $5,399,489, and of $1,356,979 or 29·1 p.c. in comparison with June, 1936, when the authorizations amounted to $4,656,689.

The value of the building authorized in the first six months of the present year was $27,981,322; this considerably exceeded the aggregate of $18,322,884 reported in the period January-June, 1936, being also much higher than in the first six months of other years since 1931. In spite of the important improvement indicated as compared with any of the last five years, the 1937 total was substantially below the average of $59,239,708 recorded in the period January-June of the years, 1920-1936. While the wholesale prices of building materials have recently advanced, the index

for the first half of the present year was also below the seventeen-years' average.

Some 50 cities furnished detailed statistics for June, 1937, showing that they had isssued more than 500 permits for dwellings valued at approximately $2,100,000 and for some 2,600 other buildings, estimated to cost almost $3,-350,000. In May, authority was given for the erection of about 600 dwellings and 3,000 other buildings, valued at approximately $1,800,000 and $3,200,000, respectively.

Quebec, Ontario, Manitoba, Alberta and British Columbia recorded increases in the value of the building permits issued during June as compared with the preceding month, the largest gain of $297,403 or 45·5 p.c. taking place in British Columbia. The remaining provinces showed declines, that of $95,244 or 56·1 p.c. in Saskatchewan being most pronounced.

As compared with June, 1936, New Brunswick, Quebec, Ontario, Manitoba, Alberta and British Columbia registered increases, of which that in British Columbia was greatest, amounting to $454,718 or 91·5 p.c. In Prince Edward Island, Nova Scotia and Saskatchewan there were moderate reductions, the largest, of $35,470, being in the last-named.

Each of the larger cities—Montreal, Toronto, Winnipeg and Vancouver—recorded increases in the value of the permits issued as compared with May, 1937, and June, 1936. Among the other centres, the following also showed improvement in each of these comparisons: Halifax, Saint John, Shawinigan Falls, Brantford, Chatham, Galt, Hamilton, Niagara Falls, York and East York Townships, Welland, Riverside, St. Boniface, Calgary, Edmonton, Lethbridge, Kamloops, Prince Rupert and North Vancouver.

The following table gives the value of the building authorized by 58 cites during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first six months of the same years are also given.

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued in first six months (1926=100)	Average indexes of wholesale prices of building materials in first six months (1926 average=100)
	$	$		
1937	6,013,668	27,981,322	35·5	94·9
1936	4,656,689	18,322,884	23·3	84·4
1935	5,104,855	24,640,511	33·8	81·2
1934	2,411,460	10,411,377	13·2	82·8
1933	3,589,204	10,315,899	13·1	78·9
1932	5,028,324	24,341,044	30·9	76·8
1931	8,593,958	58,950,508	74·8	83·5
1930	18,621,487	85,413,985	108·4	95·0
1929	27,816,592	124,609,267	158·2	99·2
1928	22,751,960	102,036,987	129·6	95·9
1927	18,363,239	80,842,719	102·6	96·0
1926	18,718,050	78,760,419	100·0	101·0
1925	14,915,884	65,899,717	83·7	103·1
1924	13,967,006	60,674,154	77·0	110·8
1923	14,286,252	73,047,496	92·7	111·4
1922	17,052,582	71,281,674	90·5	108·0
1921	14,240,934	55,771,684	70·7	132·0
1920	14,113,794	61,754,710	78·4	144·5

The value of the building represented by the construction permits issued by 58 cities was 52·7 per cent greater than in 1936, and, as already mentioned, was also higher than in the same period in 1935, 1934, 1933 or 1932. However, the aggregate for January-June in each of the last six years has been decidedly lower than in any other year since 1920, being also much below the seventeen-years' average. As compared with 1936, there has been an increase of 12·4 per cent in the index number of wholesale prices of building materials, but the mean for the first half of 1937 is below the average for the period, 1920-1936.

The provincial totals for the first six months in the years 1933-1937 are shown in the following table. The aggregates in all provinces except Alberta were higher in 1937 than in 1936; those in Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia were also greater than in 1935, 1934 or 1933, while in Quebec, Manitoba and Alberta, the authorizations during the first six months of the present year were higher in value than in the same period of 1934 or 1933, but lower than in January-June, 1935.

PROVINCIAL TOTALS OF BUILDING PERMITS ISSUED BY 58 CITIES IN FIRST HALF-YEAR, 1933-1937

Provinces	1937	1936	1935	1934	1933
	$	$	$	$	$
Prince Edward Island	101,140	70,600	96,325	47,100	41,900

Canada	**27,981,322**	**18,322,884**	**24,640,511**	**10,411,377**	**10,315,899**

The following shows the January-June aggregates for the four leading cities:—

Cities	1937	1936	1935	1934	1933
	$	$	$	$	$
Montreal	3,923,810	2,297,855	4,421,415	1,607,905	3,164,191
Toronto	4,219,155	3,166,190	5,315,395	2,523,471	1,614,038
Winnipeg	963,400	618,100	2,262,450	298,100	386,550
Vancouver	4,377,055	3,050,825	1,331,880	700,094	932,697
Total	**13,483,420**	**9,134,970**	**13,331,140**	**5,129,570**	**6,097,476**

The estimated value of the building represented by the permits granted in each of these cities during the first six months of 1937 exceeded that for the same period in 1936. The aggregates in Montreal, Toronto and Winnipeg were lower than in January-June, 1935, while that in Vancouver was decidedly higher; in all cases, improvement was shown over 1934 and 1933. Approximately 48 per cent of the total value of the building permits issued by the 58 cities in the months, January-June, of the present year was reported by the four largest centres, as compared with some 50 per cent in 1936.

The following table gives the value of the building permits issued by 58 cities during May and June, 1937, and June, 1936. The 35 cities for which records are available since 1910 are marked thus *.

Appointment of New Brunswick Fair Wage Board

On August 5, Premier Dysart announced the appointment of a New Brunswick Fair Wage Board comprised of the following: Chairman, A. B. McKinnon, C. Allan, Beatleay, Saint John; Frank H. Killespie, Moncton; Raymond Roy, Dalhousie; Roy W. Cameron, Fredericton; and John S. MacKinnon, Saint John, secretary.

Premier Dysart said that the new board would begin to function immediately, a fair wage officer, Horace R. Pettigrove having been actively engaged in this work during the past year. The Premier said that the information which the fair wage officer had collected and the achievements to his credit would materially assist the new board in its work.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JULY, 1937

Reports of Superintendents of the Employment Service

The employment situation at the end of July was reported by the Superintendents of the Employment Service to be as follows:—

In the Maritime provinces farmers were busy with hay making and crops were advancing rapidly. Pulpwood cutting was still carried on on a large scale with pulpwood cutters in demand. Heavy shipments of deal were also being made to the overseas market. Both off-shore and in-shore fishing was fair, the season for salmon having been a very good one. Coal mines in the New Glasgow area operated from two to six days per week, while those in Cape Breton and vicinity worked from two and a half to six days, with one colliery idle. Manufacturing was active, many plants were working to capacity and in some instances were operating double shifts. Some idleness, however, was reported in the iron and steel industry. A number of private homes were under construction, which provided employment in the building trades. Street paving and road work were also progressing favourably. Transportation, by rail and water, both freight and passenger, was extremely heavy. Trade was brisk and the demand for women domestics steady.

Farmers in the province of Quebec were busy haying. Logging, however, was somewhat slacker, but mining showed improvement. Manufacturing centres reported as follows:—Sherbrooke—Great activity prevailed in the silk mills and clothing industry, all vacancies being filled. Normal improvement, also, was indicated for steel mills, tool factories, machine shops and other plants of that type, but a decrease was noted in structural steel; Montreal—Metal industries were not so fully employed as a result of decreased railway operations and textiles also were slack; clothing, tobacco, boot and shoe factories, however, were active; Quebec City—Manufacturing plants were very busy, while in the Lake Saint John district and at Chicoutimi paper mills and aluminum factories were operating at full capacity. A substantial increase was noted, likewise, both in building and highway operations and these, with unemployment relief projects under way, provided work for a great number of men. Transportation was heavy and trade showed improvement. The demand for female domestics in some districts exceeded the supply of capable workers available; the call for cooks, maids and charwomen showing a substantial increase.

The demand for harvesters in Ontario was good, with no difficulty experienced in filling requirements, but men who would hire out on a monthly basis were not so easy to obtain. Wages ranged from $20.00 to $35.00 per month and $1.00 to $2.50 per day during haying and harvesting. Logging was somewhat slacker, as the peeling season was about completed, but some skilled and unskilled men were placed with the sawmills. Mining was active, with a fair call for experienced miners. Manufacturing remained fairly steady, little change being noted except that caused by seasonal conditions. Canning factories were exceptionally busy, while motor plants had reached the end of the 1937 production of cars and in some localities had closed down. Companies interested in the manufacture of woollen products reported an upturn in business in preparation for fall and winter trade. Building construction was progressing favourably and highway construction and railway maintenance absorbed many men. At Sarnia, the demand for mechanics and marine help was very good, with a number of orders listed and filled for that class of employment. Trade was good. In the Women's Department numerous calls were received for hotel and restaurant workers, as well as for experienced household help, both for city and farm. Day work was only fair, for many employers were out of town. Tourists camps and two-week fishing parties also created a slight call for male cooks in the vicinity of North Bay.

There was no great demand for harvesters in any section of the West, though varied reports from all three prairie provinces came in regarding crop conditions. In Manitoba, favourable weather prevailed. A few sections had received rains of varying intensity, with some damage from hail. Rust was still an important factor and was reported to be making gains in the Southern, Central and South-Western areas. Cutting of early barley and wheat was under way, but was not yet general and a few orders for harvest help had been received, with wages averaging $1.50 per day. A preliminary survey of this province indicated that large numbers of Saskatchewan residents had come in search of employment, thereby substantially reducing the amount of work for Manitoba farm hands. In Saskatchewan, the weather had been seasonally warm, with occasional light showers, which were keeping the country green and helping out the pasture problem to some extent, but in many sections the hay crop was a complete failure and numerous farmers had gone to Manitoba to put up hay for fodder there,

while others applied for transportation to Ontario. A few outlying districts reported good crops, but, in the majority of instances, wheat was poor and few extra men would be required for harvesting. In Alberta, the weather had been showery and crops showed steady improvement, with a good yield of the coarser grains and fodder assured. In the vicinity of Lethbridge, it was estimated that some of the irrigated land would yield about fifty bushels to the acre. Very little harvesting in this province had been started yet, as farmers were reluctant to hire men until actually needed. Logging throughout the three provinces was fair. Building construction consisted mostly of alterations and erection of small buildings and roadwork continued. A number of students also were placed in the new Forestry Training camps. Mining and trade were quiet and manufacturing unchanged. Female applicants for casual work were generally in excess of vacancies, but in the farm, country and hotel group, the situation was reversed, as there was a pronounced scarcity of experienced help available for this class of employment.

A fair demand for farm hands existed in British Columbia, with the supply about equal. Rain had helped the grain and small fruit was plentiful, but no call existed for extra orchard help. Nearly all logging camps and sawmills were working full time, although, at Nanaïmo, weather conditions and fire hazard had caused a number of camps to close down temporarily. Some difficulty was experienced in getting skilled men for sawmills. Mining remained steady, with a surplus of men in all camps. Manufacturing was unchanged. Building construction showed improvement; much of the work done, however, was alterations and repairs, with few large contracts under way. Dry-docks and shipyards at Prince Rupert were active, with the water-front also busy there, as well as at Vancouver and Victoria. Trade reported increased sales. Numerous applicants in the Women's Division were placed in hotel and cafe work, both locally and non-locally, but casual jobs for charwomen were fewer, owing to families being away from the city on holidays.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, July, 1937, summarized the employment situation as follows:—

Employment at June 21 showed a substantial improvement as compared with May 24. The improvement extended to most industries but was greatest in building and public works contracting, the boot and shoe, cotton, wool textile, and hosiery industries, textile bleaching, dyeing, etc., iron and steel and tinplate manufacture, general engineering, ship building and repairing, metal goods manufacture, certain food manufacturing industries, the distributive trades, road transport, the fishing industry, and hotel, boarding house, etc., service. There was also a seasonal improvement in agriculture. On the other hand, there was an increase in the numbers temporarily stopped in the coal mining industry, mainly due to the suspension of work on June 21 at a number of pits in connection with the annual demonstration of the Yorkshire Mine Workers' Association referred to below. There was some decline in the tailoring industry.

It is estimated that at June 21, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,517,000. This was 130,000 more than at May 24, 1937, and 584,000 more than at June 22, 1936.

Among insured workpeople, aged 16-64 (excluding those within the agricultural scheme), the percentage unemployed in Great Britain and Northern Ireland at June 21, 1937 (including those temporarily stopped), was 10·3, as compared with 10·9 at May 24, 1937, and 12·8 at June 22, 1936. In Great Britain the percentage at June 21, 1937, was 10·0, as compared with 10·7 at May 24, 1937, and 12·6 at June 22, 1936.

At June 21, 1937, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,088,866 wholly unemployed, 199,800 temporarily stopped, and 67,932 normally in casual employment, making a total of 1,356,598. This was 94,732 less than a month before, and 346,078 less than a year before. The total was made up of 1,085,614 men, 29,612 boys, 209,441 women, and 31,931 girls. The numbers temporarily stopped at June 21, 1937, included approximately 27,000 persons who had registered as unemployed as a result of pit stoppages due to the annual demonstration on that day of the Yorkshire Mine Workers' Association.

The unemployment figures for June 22, 1936, were influenced in the same way.

The total of 1,356,598 persons on the registers at June 21, 1937, included 582,619 persons with claims admitted for insurance benefit (of whom 2,341 had applications authorized for payment of unemployment allowances in supplementation of benefit), 51,498 claimants whose position under the conditions relating to contributions paid and benefit received had not been determined, and 4,717 persons disqualified for short periods from receiving benefit (of whom 1,577 had applications authorized for payment of unemployment allowances). There were also 572,580 persons (not included in any of the foregoing classes) with applications authorized for unemployment allowances, 735 persons with applications for unemployment allowances under consideration, and 144,449, other persons, of whom 25,636 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at June 21, 1937, was 1,423,439, as compared with 1,519,260 at May 24, 1937, and 1,766,372 at June 22, 1936.

United States

According to a statement issued by Frances Perkins, Secretary of Labor, it is estimated that approximately 46,000 fewer workers were employed in June than in May and weekly payrolls decreased $2,100,000 in the combined manufacturing and non-manufacturing industries survey monthly by the United States Bureau of Labor Statistics.

Between June, 1936, and June, 1937, it is estimated that nearly 1,400,000 workers have been returned to employment in these combined industries.

MANUFACTURING INDUSTRIES

Factory employment declined 1·1 per cent from May to June and payrolls decreased 2·3 per cent over the month interval. These decreases were partially due to labour disputes in the blast furnace-steel works-rolling mill industry.

The decrease of 1·1 per cent in factory employment indicates a decrease of approximately 89,000 wage earners over the month interval. Decreases in factory employment between May and June have been shown in 9 of the preceding 18 years for which data are available and payrolls have decreased in 10 instances. The June, 1937, index of factory employment (101·2) is, with the exception of the two immediately preceding months, the maximum recorded in any month since November, 1929. The June payroll index (102·8) is also, with the exception of the two preceding months, the highest level registered since November, 1929. Comparisons with June, 1936, indicate an employment gain of 12·3 per cent, or more than 900,000 workers, over the year interval, and a rise of 26·8 per cent, or nearly $44,100,000, in weekly payrolls.

Thirty-eight of the 89 separate manufacturing industries surveyed reported gains in employment. The non-durable goods group reported a slightly larger decline than the durable goods industries, largely because of seasonal recessions in a number of important branches.

Employment in the durable goods group decreased 1·0 per cent from May to June and the non-durable goods group showed a decline of 1·1 per cent. Comparisons of employment in these two groups in June, 1937, with June, 1936, show gains of 16·9 per cent in the durable goods group and 8·0 per cent in the non-durable goods group. The June level of employment in the durable goods group was 0·9 per cent below the index base average (1923-25 = 100), while in the non-durable goods group, the employment index was 3·6 per cent higher than in the index base period. For every thousand workers employed in each of these groups in the index base period there were 1,036 wage earners employed in the non-durable goods group in June, 1937, and 990 in the durable goods group.

Wage-rate increases to factory wage earners were reported in substantial numbers, a preliminary tabulation showing wage-rate increases over the month to 160,000 workers in the reporting establishments.

NON-MANUFACTURING INDUSTRIES

Employment gains were shown in 13 of the 16 non-manufacturing industries surveyed. The declines in the remaining three non-manufacturing industries (wholesale trade, year-round hotels, and brokerage) combined with the decrease in factory employment, were sufficient to offset the gains shown in anthracite and bituminous coal mining, metal mining, quarrying and non-metallic mining, crude petroleum producing, public utilities, retail trade, laundries, dyeing and cleaning, insurance, and private building construction.

The combined 16 non-manufacturing industries showed a net gain of approximately 43,000 workers over the month interval. The largest gain in number of employees (18,000) was in retail trade establishments. Seasonal gains in the laundry and dyeing and cleaning industries resulted in an increase of nearly 10,000 workers. The net gain in the 5 industries comprising the mining group was nearly

6,000 employees. Employment in the private building construction industry showed a further gain in June (2·8 per cent) and electric light and power and manufactured gas companies reported a gain of 2·2 per cent. The decreases in the non-manufacturing industries in which declines were reported over the month interval were 3·2 per cent in brokerage, 0·8 per cent in year-round hotels, and 0·5 per cent in wholesale trade.

The increases in employment in a number of the non-manufacturing industries raised the June levels to the maximum registered in recent years. Employment in the metalliferous mining industry reached the highest level since July, 1930. In the electric light and power and manufactured gas industry, employment was above that of any month since July, 1931. Employment in dyeing and cleaning establishments was higher than that of any month over the preceding six years for which records are available. In the general merchandising group of retail stores, composed of department, variety, general merchandising stores and mail order houses, the June, 1937, level was above the June levels of 1929 and succeeding years.

Wholesale and Retail Trade.—A slight recession in employment from May to June was shown by reports received from 13,265 wholesale trade establishments employing 261,885 workers in June, 1937. The decrease of 0·5 per cent in number of workers was coupled with a gain of 0·2 per cent in weekly pay rolls. Among the more important branches of wholesale trade in which employment gains were reported were lumber and building materials (3·0 per cent), petroleum and petroleum products (1·3 per cent), groceries and food specialties, food products, and hardware (0·6 per cent each), chemicals, drugs and allied products (0·5 per cent), machinery, equipment and supplies, and automotive products (0·4 per cent each). While gains in employment were noted in 21 of the 33 branches of wholesale trade surveyed, the sharp seasonal recessions of 19·4 per cent in the farm products group and 16·4 per cent in the assemblers and country buyers group combined with smaller losses in several other lines of wholesale trade resulted in a net decline in employment in this industry.

Employment in retail trade establishments showed a further gain in June, according to reports received from approximately 44,000 establishments employing more than three quarters of a million workers. The gain of 0·5 per cent in employment from May to June continues the succession of gains which have been shown each month since February of this year. Increases were general in the various groups of retail businesses surveyed. The important group of general merchandising establishments which includes department, variety, and general merchandising stores and mail order houses, showed a gain of 0·6 per cent in employment over the month interval. A seasonal expansion of 2·7 per cent in employment was reported by coal-wood-ice dealers and drug stores reported a gain of 1·9 per cent. Other lines of retail trade reporting employment gains from May to June were jewellery (1 per cent), automotive (0·7 per cent), and apparel and food (0·3 per cent each). Furniture stores reported a slight decline of 0·1 per cent and dealers in lumber and building materials reported 0·3 per cent fewer employees.

Public Utilities.—Gains in employment from May to June were reported in each of the three public utility industries surveyed. Electric light and power and manufactured gas companies reported a rise of 2·2 per cent, continuing the series of increases which have been reported since February and raising the June employment index (96·4) to the maximum recorded since July, 1931. Telephone and telegraph companies reported a gain (0·9 per cent). In the electric railroad and motor-bus operation and maintenance industry, employment rose 0·2 per cent.

Service Industries.—Three of the 5 industries included in this group reported gains in employment from May to June. A seasonal gain of 4 per cent in dyeing and cleaning plants raised the June employment index (92·2) above the level of any month in the preceding six years for which data are available. Laundries also reported a seasonal expansion in number of workers (3·7 per cent). Insurance companies reported a small gain, 0·2 per cent. Brokerage establishments reported a drop of 3·2 per cent over the month interval, and year-round hotels showed a decline of 0·8 per cent. In the latter industry, the decrease was due largely to reduced operations resulting from labour disputes in San Francisco and Kansas City.

Mining Industries.—Each of the 5 branches of the mining industry surveyed showed gains in employment from May to June. Crude petroleum producing firms reported an increase of 2·4 per cent in employment over the month interval. Metalliferous mines absorbed additional workers in June, the gain of 1·2 per cent continuing the virtually unbroken succession of employment increases which have been reported each month since July, 1935. Employment in bituminous coal mines increased 0·4 per cent from May to June and quarries and non-metallic mines also reported

a gain of 0·4 per cent. The general level of employment in the anthracite mining industry showed slight change from May to June. The gain of 0·2 per cent was, however, coupled with an increase of 14·7 per cent in weekly pay rolls. While many workers in this industry were returned to jobs in June following the settlement of labour difficulties, this increase was virtually offset by the closing down of a number of mines which were active in the preceding month.

Private Building Construction.—Employment in the private building construction industry increased 2·8 per cent between May and June, and pay-rolls rose 3·1 per cent, according to reports received from 8,942 contractors employing 121,124 workers in June. Compared with June, 1936, employment in this industry shows a gain of 10·2 per cent over the year interval, and pay-rolls show an increase of 26·2 per cent. The reports supplied by the co-operating contractors relate to employees engaged in erecting, altering, and repairing private buildings and do not include projects financed by Public Works Administration or Reconstruction Finance Corporation funds or regular appropriations of the Federal, State, and local governments.

PUBLIC EMPLOYMENT

Employment on projects financed by The Works Program decreased during June. Approximately 2,722,000 employees were working on projects financed by this program, a decrease of 297,000 compared with the number employed in May. Of the total number of workers engaged on the program 2,023,000 were working on projects operated by the Works Progress Administration. Total pay-roll disbursements for the month amounted to $126,908,000. The value of material orders placed was $37,986,000.

There was virtually no change in the number of workers employed on construction projects financed from funds provided by the Public Works Administration. In June employment totalled 206,000, of which approximately 37,000 were engaged on Federal projects financed by funds provided by the National Industrial Recovery Act, 27,000 on non-Federal N.I.R.A. projects, and 142,000 on non-Federal projects financed from funds provided by the Emergency Relief Appropriation Acts of 1935 and 1936. Pay-roll disbursements during June on all projects financed by the Public Works Administration were $16,586,000. The value of materials for which orders were placed during the month totalled approximately $31,879,000.

During June, 324,000 workers were employed on emergency conservation work (Civilian Conservation Corps), a decrease of 25,000 compared with the preceding month. Of the total number of workers engaged on this program in June, 271,000 were enrolled workers; 7,000, reserve officers; 2,000, educational advisers; and 44,000, supervisory and technical workers. Pay-roll disbursements for all workers totalled $16,084,000.

More than 175,000 workers were engaged on construction projects financed from regular governmental appropriations in June, an increase of 15,000 compared with the preceding month. Pay-roll disbursements totalled $16,418,000. This was an increase of over $1,139,000 compared with $15,279,000 in May. Material orders placed in June were valued at $18,879,000.

The number of employees working on the construction and maintenance of roads financed wholly from State funds was 168,000, a decrease of more than 8,000 compared with the number employed in May. The increase in employment on new road construction was more than offset by decreases in employment on maintenance work. In June, 19,000 workers were employed on the construction of new roads and 149,000 on repairing and maintaining roads. Pay-rolls for both types of work amounted to $11,070,000.

Immigration to Canada during 1937

The Department of Mines and Resources, Immigration Branch has issued figures showing immigration to Canada for the six months ended June 30, 1937. The total number of immigrants entering the Dominion during that period was 6,827 compared with 5,252 in the corresponding period of 1936 or a 30 per cent increase. Immigrants of British origin increased 23·8 per cent, 1,129 entering Canada compared with 912 during the first six months of 1936; immigrants of northern European extraction (Belgium, Danish, French, Dutch, etc·) numbered 619 compared with 400 for the same period in 1936. Other races accounted for 2,479 immigrants in the first six months of 1937, an increase of 36·9 per cent over the 1,811 in this classification who came to Canada in the first six months of 1936. Twenty-six hundred immigrants came from the United States during the period, an increase of 22·1 per cent.

Classified according to sex, of the total number of immigrants entering Canada during the first six months of 1937, there were 1,764 adult males, 2,724 adult females and 2,339 children under eighteen. Classified according to occupations, 1,824 belonged to the farming class, 242 to the labouring class, 391 were mechanics, 563 in the trading class, 39 in the mining class, 312 female domestic servants; while 3,456 were classified as "other classes."

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the Labour Gazette for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-hours per week, except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work fro the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract

for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada.

DEPARTMENT OF MINES AND RESOURCES

Contract in Group "A" (Construction, Remodelling, Repair, etc.)

Erection of a stone monument to Robert Cavelier de La Salle at Lachine, P.Q. Name of contractors, the National Granite Works, Ltd., Montreal, P.Q. Date of contract, June 30, 1937. Amount of contract, $4,818.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmiths	$0 60	8	44
Carpenters and joiners	0 70	8	44
Cement finishers	0 60	8	44
Cement and concrete mixer operators—Steam	0 65	8	44
Gas. or electric	0 50	8	44
Compressor operator (gas. or elec.)	0 50	8	44
Crane operator (gas. or elec.)	0 55	8	44
Hoist operator (gas. or elec.)	0 50	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Drivers	0 40	8	44
Drill runners	0 50	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Pipe layers, caulkers and solderers	0 50	8	44
Pumpmen	0 50	8	44
Stonecutters	0 75	8	44
Stonemasons	0 90	8	44
Stonemason's helpers	0 45	8	44
Watchmen	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Renewal of the heating plant and incinerator at the Military Hospital, Cogswell Street, Halifax, N.S. Name of contractor, Mr. W. F. Bedwin, Halifax, N.S. Date of contract, July 15, 1937. Amount of contract, $5,295.00. A fair

wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmith	$0 70	8	44
Blacksmith's helper	0 45	8	44
Bricklayer and hollow tilelayer	0 97½	8	44
Brick and hollow tilelayer's helper (mixing and tempering mortar)	0 45	8	44
Carpenters and joiners	0 60	8	44
Cement finishers	0 60	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Driver	0 40	8	44
Electrician (inside wireman)	0 80	8	44
Labourers	0 40	8	44
Lathers, metal	0 60	8	44
Machinists	0 70	8	44
Painters (spray)	0 65	8	44
Painters and glaziers	0 55	8	44
Plasterers	0 80	8	44
Plasterers' helpers (mixing and tempering material	0 45	8	44
Plumbers and steamfitters	0 75	8	44
Roofers, felt and gravel	0 45	8	44
Sheet metal workers	0 70	8	44
Watchman	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Supplying and laying roofs on certain buildings at Wellington Barracks, Halifax, N.S. Name of contractors, James Donohue Limited, Halifax, N.S. Date of contract, July 17, 1937. Amount of contract, $1,847.00. A fair wages schedule was inserted in the contract for the laying of the roofs as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmiths	$0 70	8	44
Blacksmiths' helpers	0 45	8	44
Carpenters and joiners	0 60	8	44
Drivers	0 40	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Plumbers and steamfitters	0 75	8	44
Roofers—composition	0 50	8	44
Roofers—felt and gravel	0 45	8	44
Sheet metal workers	0 70	8	44
Watchmen	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Supply and installation of kitchen equipment in the Barrack Block at the Royal Canadian Air Force Station, at Rockcliffe, Ontario. Name of contractors, Lagasse & Mantha Ltee., Ottawa. Date of contract, July 28, 1937. Amount of contract, $7,910.00. A fair wages schedule was inserted in the contract for the installation work as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Plumbers and steamfitters	$0 83	8	44
Sheet metal workers	0 75	8	44
Electricians	0 70	8	44
Labourers	0 40	8	44
Painters	0 65	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a Central Heating Plant Building at the R. C. A. F. Station at Trenton, Ont. Name of contractors, H. Dagenais, Ltd., Ottawa, Ont. Date of contract, July 28, 1937. Amount of contract, $36,100.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos insulation workers	$0 65	8	44
Blacksmiths	0 60	8	44
Blacksmiths' helpers	0 45	8	44
Brick and hollow tile layers	0 90	8	44
Brick and hollow tile layers' helpers (tempering and mixing mortar)	0 45	8	44
Carpenters and joiners	0 70	8	44
Cement and concrete mixer operator—steam	0 65	8	44
gas, or elec	0 50	8	44
Cement finisher	0 60	8	44
Compressor operator—gas. or elec.	0 50	8	44
Drivers	0 40	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Electricians (inside wiremen)	0 70	8	44
Engineers on steel erection	0 80	8	44
Engineers, operating, steam—			
single or double drums	0 65	8	44
three or more drums	0 75	8	44
Firemen, stationary	0 45	8	44
Hoist operators—gas. or elec.	0 50	8	44
Labourers	0 40	8	44
Lathers, metal	0 70	8	44
Lathers, wood	0 65	8	44
Machinists	0 65	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Ornamental iron workers	60	8	44
Painters and glaziers	60	8	44

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Plasterers	$0 80	8	44
Plasterers' helpers (tempering and mixing material)	0 45	8	44
Plumbers and steamfitters	0 75	8	44
Rodmen—reinforced steel	0 50	8	44
Roofers, felt and gravel—patent	0 45	8	44
Sheet metal workers	0 70	8	44
Shovel operators—gas	0 90	8	44
Steam shovel engineers	0 90	8	44
Steam shovel cranemen	0 70	8	44
Steam shovel firemen	0 55	8	44
Stonecutters	0 75	8	44
Stonemasons	0 90	8	44
Stonemasons' helpers (tempering and mixing mortar)	0 45	8	44
Structural steel workers	0 80	8	44
Tile setters—ornamental	0 90	8	44
Tile setters' helpers (all men assigned to help tradesmen)	0 45	8	44
Watchmen	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Supply and erection of structural steel at the Royal Canadian Air Force Station, Trenton, Ont. Name of contractors, John T. Hepburn Ltd., Toronto, Ont. Date of contract, July 23, 1937. Amount of contract, $6,225.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Drivers	$0 40	8	44
Driver, team and wagon	0 75	8	44
Hoist operators—gas. or electric	0 50	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
Painters	0 60	8	44
Structural steel workers	0 80	8	44
Watchmen	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Contracts in Group "B" (Manufacture and Repair of Equipment and Supplies.)

The following is a statement of contracts awarded by the Department of National Defence during the month of July, 1937, for the manufacture and repair of various classes of equipment and supplies, which contracts included in all cases the "B" labour conditions above referred to:—

Nature of Contract	Contractors
Folding tables and forms	Knechtels Ltd., Hanover, Ont.
Oilskin coats	J. F. Creaser Co., Ltd., La Have, N.S.
White shirts	Cluett Peabody Co. of Canada Ltd., Kitchener, Ont.
Drab serge jackets	S. S. Holden Ltd., Ottawa, Ont.
Drab serge jackets	Workmen Uniform Co., Ltd., Montreal. P.Q.
Steel barrels, 175 gall	Sorel Mechanical Shops Ltd., Sorel, P.Q.
Q. F. cartridge clips	Robert Mitchell Co., Ltd., Montreal, P.Q.
Tools	Gray-Bonney Tool Co., Ltd., Toronto, Ont.
Forged steel bars	Canadian Tube & Steel Products Ltd., Montreal, P.Q.
Naval jerseys	Regent Knitting Mills Ltd., Montreal, P.Q.
Khaki stockings	Mercury Mills Ltd., Hamilton, Ont.
Boots	J. & M. Cote Ltd., St. Hyacinthe, P.Q.
Marquee tents	J. J. Turner & Sons Ltd., Peterborough, Ont.
Blue serge jackets	Workman Uniform Co. Ltd., Montreal, P.Q.
Tent pins, medium	McDonell & Conyers Ltd. Ottawa, Ont.
Tent pins, small	Green Valley Lumber Co., Eastview, Ont.
Steel shell exploder containers	Canadian Lift Truck Co., Ltd., Montreal, P.Q.
Fuse hole plugs	Robert Mitchell Co., Ltd., Montreal, P.Q.
Trotyl (T.N.T.)	Canadian Industries Ltd., Montreal, P.Q.
Spare parts for parachutes	Irving Air Chute Co., Ltd., Bridgeburg, Ont.
Steel Billets for manufacture of shell.	Canadian Tube & Steel Products Ltd., Montreal, P.Q.
Steel Forgings for Shell	Canadian Tube & Steel Products Ltd., Montreal, P.Q.
Bandoliers	Hugh Carson Co., Ltd., Ottawa, Ont.

Contracts for the Manufacture, Overhaul and Reconditioning of Aircraft.

Complete overhaul and modification of Wasp series C. engine. Name of contractors, Canadian Pratt & Whitney Aircraft Co., Ltd., Longueuil, P.Q. Date of contract, July 20, 1937. Amount of contract, $1,340.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Engine Assembly—			
Fitter (A.E.)	$0 60	Hours not more than 48 per week	
Fitter's helper (A.E.)	0 40		
Machinist	0 65		
Machinist's helper	0 40		
Machine operators	0 50		
Sandblasters	0 55		
Labourers	0 35		
Airframe construction and Assembly			
Fitter (A.F.)	0 60		
Fitter's helper (A.F.)	0 40		
Machinist	0 65		
Machinist's helper	0 40		
Machine operator	0 50		
Woodworker (joiner)	0 60		
Woodworker's helper	0 40		
Welder	0 60		
Welder's helper	0 40		
Electrician	0 65		
Electrician's helper	0 40		
Painter and doper	0 55		
Painter and doper's helper	0 40		
Fabric worker—female	0 40		
Fabric worker's helper	0 30		
Upholsterer	0 55		
Upholsterer's helper	0 40		
Sandblaster	0 55		
Labourer	0 35		
Erector	0 60		
Erector's helper	0 40		
Sheet metal worker	0 60		
Sheet metal worker's helper	0 40		
Rivetters	0 50		
Rivetters' helpers	0 40		
Apprentices to fitters, machnists, and sheet metal workers only—(16 to 21 years of age);			
1st year	$0 20		
2nd year	0 25		
3rd year	0 35		

Note.—Only one helper to be employed to each journeyman. No more than one apprentice to be employed to each five journeymen.

Complete overhaul of Jaguar Mk. IV Engine. Name of contractors, Armstrong Siddeley Motors Ltd., Ottawa, Ont. Date of contract, June 30, 1937. Amount of contract, $1,694.70. The preceding fair wages schedule was inserted in this contract also.

Construction of seven Fleet Trainer Airframes. Name of contractors, Fleet Aircraft Ltd., Fort Erie, Ont. Date of contract, July 2, 1937. Amount of contract, $34,398.00. The preceding fair wages schedule was also inserted in this contract.

Complete overhaul and reconditioning of Fairchild 71 Landplane. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, July 19, 1937. Amount of contract, $5,707.00. The preceding fair wages schedule was also inserted in this contract.

Construction of nine Avro type aircraft complete with Cheetah Mark V engines and equipment. Name of contractors, Armstrong Siddeley Motors Ltd., Ottawa, Ont. Date of contract, July 30, 1937. Amount of contract, $181,980.00. The preceding fair wages schedule was also inserted in this contract.

Construction of seven Aeroplane engines. Name of contractors, De Havilland Aircraft of Canada, Ltd., Toronto, Ont. Date of contract, July 27, 1937. Amount of contract, $16,800.00. The preceding fair wages schedule was inserted in the contract.

National Harbours Board

Contracts in Group "A" (Construction, Remodelling, Repair and Demolition.)

Construction of Shed 5 Extension, Alexandria Pier, Montreal Harbour, P.Q. Name of contractors, L. G. Ogilvie & Co., Ltd., Montreal, P.Q. Date of contract, April 9, 1937. Amount of contract, approximately $139,210.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asphalt rakers and finishers	$0 55	8	44
Blacksmiths	0 60	8	44
Blacksmiths' helpers	0 45	8	44
Brick and hollow tile layers	0 90	8	44
Brick and hollow tile layers' helpers (tempering and mixing mortar)	0 45	8	44
Carpenters and joiners	0 70	8	44
Cement finishers	0 60	8	44
Cement and concrete mixer operator			
Steam	0 65	8	44
Gasoline or electric	0 50	8	44
Compressor operators, gas. and elec	0 50	8	44
Crane operators, gas. or electric	0 55	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Drivers	0 40	8	44
Electricians (inside wiremen)	0 75	8	44
Engineers, Operating, Steam—			
1 or 2 drums	0 65	8	44
3 or more drums	0 75	8	44
Engineers on steel erection	0 75	8	44
Firemen, stationary	0 50	8	44
Hoist operators—gas. or elec	0 50	8	44
Labourers	0 40	8	44
Machinists	0 65	8	44
Mastic floor spreaders and layers	0 70	8	44
Mastic floor rubbers and finishers	0 55	8	44
Mastic floor kettlemen	0 55	8	44
Mastic floor labourers	0 45	8	44
Millwrights	0 70	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 to 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Painters—spray	0 70	8	44
Painters and glaziers	0 66	8	44
Pipe fitters (surface, temporary work)	0 55	8	44
Pipe layers, caulkers and solderers	0 50	8	44
Piledriver foreman	0 75	8	44
Piledriver engineers	0 65	8	44
Piledriver firemen	0 50	8	44
Piledriver derrick engineers	0 65	8	44
Piledriver derrick firemen	0 50	8	44
Plumbers and steamfitters	0 75	8	44
Riggers—general	0 55	8	44

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Roofers, felt and gravel	$0 45	8	44

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

"The Evaluation of Permanent Incapacity for Work in Social Insurance" is the title of a report issued recently by the International Labour Office.

In an introduction to the study, it is stated that workmen's compensation and invalidity insurance require for their proper working a suitable definition of the incapacity for which benefit is payable and well-considered methods of evaluation. The definition and evaluation of permanent incapacity affect the rights of millions of accident victims and invalids the report declares.

The study undertaken by the I.L.O. consists of a comparison and critical analysis of the methods widely used for the evaluation of incapacity in workmen's compensation and invalidity insurance. It does not deal with all of the problems involved, but only with those which are fundamental. It leaves aside the questions arising out of second injuries and the previous state of health of the disabled person, and confines itself to the evaluation of the incapacity of compulsorily insured persons, to the exclusion of that of the voluntarily insured and widows.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Fishing

BRITISH COLUMBIA.—CANNERY OPERATORS AND THE B.C. FISHERMEN'S PROTECTIVE ASSOCIATION.

This agreement, made June 30, 1937, covers prices for gillnet caught salmon for the current season.

Prices for Fraser River district: 58 cents per fish for sockeye, 53 cents if fishermen live on company property. Prices for Millbank Sound to Cape Caution district: 7½ cents per pound for sockeye, 25 cents per fish for cohoe and steelhead, 3¾ cents per fish for pinks, 5¼ cents per fish for chums, 52½ cents per fish for red springs over 12 pounds, 27 cents for red springs 12 pounds or less, 5¼ cents per fish for jacksprings and whitesprings.

Adjustment in prices may be negotiated during the season but fishing operations are to be continued.

Manufacturing: Food, Drink and Tobacco

WINNIPEG, MANITOBA.—TWO ABATTOIRS AND THE BUTCHERS AND MEAT PACKERS FEDERAL UNION No. 97.

Agreements in effect from October and November 1936, subject to 30 days' notice.

The management agrees to recognize the union and to negotiate with the Shop Committee.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one half. Work on Sundays and holidays, double time.

All employees to receive equal pay for equal work.

WINNIPEG, MANITOBA.—A CERTAIN COLD STORAGE FIRM AND THE BUTCHERS AND MEAT PACKERS FEDERAL UNION No. 97.

Rules and rates of pay governing warehouse employees engaged in handling of storage goods, in effect from 1936 to July 1, 1937 and thereafter from year to year until notice.

The company recognizes the Shop Committee and no employee is to be discriminated against for union activities.

Hours: 60 per week.

Overtime: time and one half.

Wages: all warehousemen engaged in handling of storage goods to be given an increase of 5 cents per hour.

Employees with three years steady employment with the Company to be given one week's holiday with pay each year and employees with five years steady employment, two weeks holiday with pay each year.

Work is to be divided between the steady employees of the Company during slack seasons.

MONTREAL, QUEBEC.—CERTAIN BAKERIES (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL No. 115.

Agreement to be in effect from May 1, 1936 to May 1, 1937 and thereafter until notice.

Only union members to be employed.

Hours: 8½ per day, 6 days per week.

Overtime: to be paid at regular rate.

Wages per week: first hand $39, second hand $36, third hand $33.

The union label is to be used.

TORONTO, ONTARIO.—CERTAIN BAKERIES (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION, LOCAL No. 181.

Agreement to be in effect from June 25, 1937 to April 20, 1938, and until a new agreement is signed. Only union members to be employed, if available.

Hours: 8 per day, 48 per week.

Wages per week: foremen or first hand $43, second hands $39, third hands $35. (These are increases of $5 per week over the previous rates.)

Disputes are to be settled by arbitration.

WINNIPEG, MANITOBA.—CERTAIN BAKERIES AND THEIR INSIDE EMPLOYEES (MEMBERS OF THE ONE BIG UNION).

Agreements are in effect with three bakeries from May 1, 1937 to April 30, 1938, with one bakery from March 9, 1937 to March 12, 1938 and with another bakery from January 1, 1937 to December 31, 1937.

Hours: 48 in some bakeries, 52 in others.

Wages per week: bakers from $22.50 to $25, helpers $17.50 to $18.50, apprentices $12 to $18.

Annual holidays with pay: one to two weeks.

WINNIPEG, MANITOBA.—CERTAIN BAKERIES AND THEIR SALESMEN (MEMBERS OF THE ONE BIG UNION).

Agreements expiring in December, 1937, are now in effect with two bakeries.

In one bakery, a basic rate of $14 per week is set and commission of 10 per cent on retail sales and 6 per cent on wholesale sales, with a guaranteed minimum of $23 per week.

In the other bakery, the basic rate is $18 with from 7 to 10 per cent commission on retail sales and from 3 to 5 per cent on wholesale sales, with a guaranteed minimum of $27. Truck drivers receive $27 with no commission.

Two weeks holidays with pay each year is provided for.

Toronto, Ontario.—Certain Breweries and the International Union of United Brewery Workers, Local No. 304.

Agreement to be in effect from April 1, 1937, to March 31, 1938, and thereafter from year to year subject to notice.

Only union members to be employed, if satisfactory members available.

Hours: from April 1 to September 30, 9 hours per day, 4 on Saturdays, a 49 hour week; from October 1 to March 31, 8 per day, 4 on Saturdays, a 44 hour week. Drivers and helpers on city delivery, 48 hours per week. Drivers on transport work, 54 hours from April 1 to September 30, and 48 hours from October 1 to March 31.

Overtime: time and one-half. Employees will be paid for four specified legal holidays.

Wages per week: coopers $30, truck drivers $26, truck driver helpers $23.50; brew house, fermenting room and cold storage, watchman, bottlers operating machines, $25.50, other bottlers $23.50.

Drivers and helpers, shippers and receivers, men in retail department handling goods, if employed for more than a year to receive two weeks' holidays with pay during winter months; drivers and helpers employed less than one year, one week's holidays.

Disputes are to be settled by arbitration and no strike or lockout to occur pending the decision of the arbitration board.

London, Ontario.—A Certain Brewery and the National Beverage Workers Union, Local No. 1.

Agreement to be in effect from April 1, 1937, to March 31, 1938, and thereafter from year to year subject to notice.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, March, 1937, page 361, with these exceptions:

Wages: all wage rates in the schedule are increased by $1 per week.

The principle of seniority is recognized as far as practicable and provided it does not hamper the efficient operation of the brewery.

Waterloo, Ontario.—A Certain Brewery and the International Union of United Brewery Workers, Local No. 173.

Agreement to be in effect from April 1, 1937, to March 31, 1938, and thereafter from year to year subject to notice.

This agreement is similar to the one summarized above for Toronto with these exceptions:

Hours for brewery workers are 50 per week in summer months and 45 in winter months.

Wages are $1 less than the Toronto schedule except coopers for whom rate is the same as Toronto. An extra class of work "wash house" at $24.50 is in the schedule.

Port Arthur and Fort William, Ontario.—Certain Breweries and the International Union of United Brewery Workers, Local No. 316.

Agreements to be in effect from October 1, 1936, in Port Arthur and from April 19, 1937, in Fort William, until April 30, 1938, and thereafter from year to year subject to notice.

Only union members to be employed, if available. Any non-union men in the employ of the brewery at the time the agreement was made were to join the union. No discrimination against union members for doing committee work for the union, provided notice is given of the length of time necessary for such committee work. Union made malt, materials and machinery shall be given preference.

Hours worked and wages paid in the brewery are to be as laid down by Order in Council under the Industrial Standards Act of Ontario (Labour Gazette, July, 1935, page 633 and September, 1936, page 838).

Work on Sundays and legal holidays to be paid at time and one-half.

Wages in carbonated beverage department: $22.50 per week for man in charge, $20 for all other employees.

If necessary to lay off employees, they will be laid off impartially and in rotation. No one will be laid off for longer than a week at a time.

One apprentice may be employed to every ten union men in the brewing department, apprenticeship to last two years.

Any disputes which cannot be settled between the parties will be referred to arbitration. No strike to occur pending the result of such arbitration.

Calgary, Edmonton and Lethbridge, Alberta.—Certain Breweries and the International Union of United Brewery Workers, Local Nos. 124 (Calgary), 314 (Edmonton) and 354 (Lethbridge).

Agreement to be in effect from April 1, 1937 to March 31, 1939.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette June 1933, page 648 and August 1932, page 922, with the following exceptions:

Wages of hourly paid employees of the engineering department are increased 3 cents per hour.

Fernie and Cranbrook, B.C.—Certain Breweries and the International Union of United Brewery Workers, Local 308.

Agreement to be in effect from June 1, 1937 to May 31, 1939.

Only union members to be employed, if available. No discrimination to be shown against employees on account of union activities. All materials, including extract, used in the brewery and bottling department should be made by union men, if possible. The union will supply the union label to employers party to this agreement.

Hours: 8 per day, 6 days per week except for engineers, and except for teamsters. Hours for teamsters: 7 per day. Hours for engineers: 48 per week.

Overtime: time and one half; work on Sundays and legal holidays, double time, except for engineers.

Minimum wages per day: brewers, cellarmen, kettlemen and coopers $5.75; washhouse men and other men employed in the Brewery $5.50; bottle shop workers $5.15; slack barrel coopers $5.15, new men $4.15 for first six months, $4.65 for second six months. Minimum wages per month: teamsters $125, first engineers $168, second engineers $158. (These rates are increases of $6 to $8 per month and of 25 to 30 cents per day over the previous rates.)

If necessary to reduce the working staff during the slack season, employees will be laid off impartially and in rotation for no longer than a week at a time.

Any disputes are to be referred to arbitration.

VICTORIA, B.C.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF UNITED BREWERY WORKERS, LOCAL NO. 280.

Agreement to be in effect from January 1, 1937 to December 31, 1937 and thereafter from year to year subject to notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE December, 1935, page 1153 with the following exceptions:

Hours are reduced from 48 to 44 per week with Saturday afternoon off.

Overtime to be paid at time and one half.

The weekly wage rates are the same except for engineers (other than chief engineer) and firemen whose weekly rate is increased $1 per week to $30.

Manufacturing: Wood Products

VANCOUVER, B.C.—CERTAIN SASH AND DOOR FACTORIES AND THE AMALGAMATED BUILDING WORKERS OF CANADA.

Agreement to be in effect from February 1, 1937 to January 31, 1938.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1936, page 1180, with this exception:

In the previous agreement it was provided that if the average base price of doors fall to a certain price, wage rates would be reduced 10 per cent. It is now also provided that should the average base price rise 10 per cent, the wage rate should be similarly increased.

Manufacturing: Pulp, Paper and Paper Products

QUEBEC, P.Q.—ANGLO-CANADIAN PULP AND PAPER MILLS LTD. AND THE QUEBEC PROVINCIAL COUNCIL OF PAPER MILL UNIONS ON BEHALF OF THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, LOCAL NO. 250 AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL NO. 137.

Agreement to be in effect from April 15, 1937, to May 1, 1938, and thereafter from year to year subject to notice.

The company recognizes the unions as the bargaining agency for the employees and agrees to employ union members, if available. Any non-union workers employed must join the union.

Hours: the paper mill will not run more than 6 days a week; from 12 midnight Sunday night to 12 midnight Saturday night. Pulp mills may run the necessary time to supply stock for the paper machines for this period of operation. Hours for both day and shift workers: 8 per day. All day workers who work on Sundays will be entitled to and expected to take one day off during the week.

Overtime: for day workers time and one-half for work on Sundays and on four specified holidays and for all work over 8 hours. Tour workers to be paid time and one-half for Sunday work and work on the four holidays. Day workers called in for breakdowns without previous notice to be paid time and one-half with a minimum of four hours.

Wages: a general increase of 5 per cent in wages was made. Certain of the new hourly rates are as follows: Control—paper testers 52½ cents, pulp testers 45 cents. Stores—issue clerks 50 cents, electric trucker and general helper 42 cents. Mixing room—foremen 64½ and 95½ cents, meter men 45 cents, beater men and wet machine operators 42 cents. Steam plant—foremen 74½ cents, heat and ventilator men 64½ cents, electric boiler operators 54½ cents, boiler room help 50 cents, filter repair man 45½ cents, filter operators 44 cents, larry men and filter cleaners 42 cents, ash handlers and acid handlers 40 cents. Sulphite—cooks 90 cents, first helpers 64½ cents, second helpers 50½ cents, blow pit men 48 cents, third helpers 42 cents, limestone men 40 and 45 cents, chipper foreman 50 cents, chipper men 42 cents, wood handlers 38 cents. Groundwood—foremen 84 cents, stone sharpeners 52 cents, screen men 50 cents, assistant stone sharpeners 48 cents, grindermen 45 cents, magazine loaders and wood cleaners 40 cents. Wood handling—foremen 50 cents, others 38 and 42 cents. Finishing and Shipping—foremen 74½ cents, paper inspectors and electric crane operators 52½ cents, head finishers 48 cents, electric truckers 45½ cents, finishers and checkers 45 cents, head coreman 44 cents, paper stackers 38 cents, others 40 to 42 cents. Electrical—shift electricians 82 cents, winderman 70 cents, first class electrician 68 cents, sub-station operators 64 cents, second class electrician 62 cents, Harland drive operators and motor man 54½ cents, helpers 42 and 45½ cents. Yard—locomotive engineer 63 cents, foreman 60 cents, brakesmen 50 and 52½ cents, track foreman 50 cents, labourers 38 cents. Paper machines—boss machine tenders $97.12 per week, machine tenders $1.53, back tenders $1.36, third hands $1.01, fourth hand 63 cents, fifth hands 53 cents, sixth hands 44 cents, rewindermen 63 cents, rewinder helpers 44 cents, clothing man $66.67 per week, assistant clothing men 45 cents per hour, cleaners 44 cents. Painters—boss painter 68 cents, painters 47½ and 50 cents, helpers 42 cents. Miscellaneous—fire inspector $44.10 per week, night fire inspector 50 cents, gateman 44 cents, others 40 and 42 cents. Cafeteria—cook $21 per week, waitress and counter girl $7.35 per week, head charwoman $11.57 and $14.39 per week. Wharf—foreman $52.50 per week. Mechanical—foreman pipe fitter $67.72 per week, foreman welder $66.15, foreman machinist $56.18, general millwright and paper millwright foremen $55.13, foreman oiler $53.55, groundwood millwright foreman $44.10, sulphite and paper mill millwright foreman 75½ cents, pump millwright, pattern maker, 75½ cents; general millwright and roll grinder 72 cents, first class machinist 70 cents, crane operator 68 cents, steam plant millwright 68 cents, bricklayer mason 68 cents, groundwood millwrights and tinsmiths 60 and 64½ cents, machinist 68 cents, pipefitters 64½ cents, welders 58 and 64½ cents, second class machinists 60 cents, millwrights 54½ and 60 cents, oilers 58 cents, third class machinists 54½ and 58 cents, pipefitters 50 and 54½ cents riggers and helpers 50 cents, general helper 42 cents.

All permanent employees in the employ of the company at the time the agreement made are entitled to one week's holiday with pay annually. New employees taken on will be entitled to the holiday after one year's service.

No strike or lockout to occur during the life of the agreement. Should any one or group of union members violate this clause, such action will not cancel this agreement, and

the unions will co-operate to the fullest extent to keep the plant operating.

A joint committee made up of the representatives of the two local unions will be formed to take up grievances with the Company. Any disputes which cannot be settled between the Committee and the officials of the mill, shall be referred to the general manager or his representative. If a settlement is not then reached it shall be referred to the general manager and the president of the Quebec Provincial Council of Paper Mill Unions. If they cannot reach an agreement it will then be referred to arbitration, each party appointing a representative, these two selecting a third, or if they cannot agree on a third the Provincial Minister of Labour will be requested to appoint the third party. The decision of this board to be final and binding.

Manufacturing: Pulp, Paper and Paper Products

Dalhousie, N.B.—New Brunswick International Paper Company and the International Brotherhood of Paper Makers, (Local 236) and International Brotherhood of Pulp, Sulphite and Paper Mill Workers (Local 146).

Agreement to be in effect from April 9, 1937, to April 30, 1938, and thereafter from year to year, subject to notice.

The company recognizes the union and agrees when employing new workers to give preference to union members, if available, and to co-operate with the union in obtaining and retaining members.

In making promotions or in laying off employees, consideration will be given first to ability and secondly to length of service. If it is necessary to materially curtail operations in any plant thus creating a social problem in the community, the management will, in addition to the above, give consideration to employees with dependents, if capable and efficient, as against employees without dependents.

Hours: the regular operation of pulp and paper mills will be six days per week with 24 hours shutdown on Sunday. When necessary, pulp mills may be operated for a longer period. Hours for day workers 8 per day. Tour workers will be organized into three shifts of 8 hours, shifts to rotate in sequence weekly.

Overtime: day workers to be paid time and one-half for all time worked in excess of 10 hours on any week day and time and one-half for all work during shutdown period on Sunday or three specified holidays. Day workers working on Sunday or holidays are also to take one day off during the week. Day workers if called at night to be allowed time and one-half for the period worked with a minimum of 4 hours' time. Tour workers will be paid time and one-half for all time worked during the regular shutdown periods on Sundays and holidays.

Wages: an increase of 2 cents per hour was made from May 1, 1937, and it is further provided that on January 1, 1938, the total hourly payroll will be increased 5 per cent and the increase divided so as to give the same increase in rate per hour to each hourly employee, such increased rates to remain in effect until May 1, 1938. Wages per hour from May 1, 1937: Wood handling—head wood handler 43 and 51 cents, wood handler 40 cents, scaler or counter 43 cents, saw filer 52 and 63 cents, crane operator 71 cents, drag operator 46 cents, head wood fireman 56 cents, wood fireman 53 cents, water boy 27 cents, other classes 40 to 43 cents. Wood room—head preparer 46 and 49 cents, knife grinder 43 cents, wood handler, conveyor man, sawyer, barker man, splitter man, 40 cents. Chips—chipper man and chip screen man 40 cents, chip bin man 40 and 41 cents. Grinders—stone sharpener 56 cents, grinder man 49 cents, oiler 43 and 45 cents, block handler 41 cents, waste handler 40 and 41 cents. Groundwood screens and deckers—screenman 57 cents, deckerman 49 cents, sliverman 41 cents. Acid plant—acid maker 73 cents, tower man 40 cents. Digesters—cook 79 cents, cook's helpers 45 and 58 cents, blow pit man 45 and 47 cents. Beaters—beaterman 43 and 46 cents, beaterman helper 41 cents, stock regulators 66 and 79 cents, other classes 41 to 47 cents. Paper machines—machine tenders $1.55 and $1.64, back tenders $1.38 and $1.48, third hand $1.05 and $1.10, fourth hand 65 cents, fifth hand 58 cents, sixth hand 47 cents, oiler 52 cents, head clothing man $1.05, clothing man 67 cents, clothing man helper 49 cents. Wrapper machines—machine tender 85 cents, second hand 66 cents, third hand 60 cents. Finishing—roll finisher 40, 43 and 45 cents, weigher 46 and 49 cents, marker 51 cents, rewinder man 47 and 53 cents, rewinder man helper 40 and 41 cents, head core cleaner 46 and 58 cents, core cleaners 40 and 43 cents, electric truck 49 and 52 cents, labourer 40 and 41 cents, finishing clerk 47 and 52 cents, wrapper preparer 40 and 43 cents. Indoor miscellaneous—oil keeper 47 cents, head oiler 57 and 68 cents, oiler 41 and 43 cents, electric truck operator 49 cents, storekeeper assistant 43 cents, other classes including cleaners, elevator man, labourers 40 cents for day work and 41 for tour work. Paper handling—head paper loader 45 and 61 cents, paper loader 42 cents, checker 43 and 49 cents, car man 42 and 45 cents, electric truck operator and crane operator 49 and 52 cents, roll distributor 40 and 41 cents, truck operator 40 cents. Marine and wharf—paper handlers 40 cents, checker 43 and 52 cents, signal man 40 cents, winch operator 43 and 47 cents, hatch operator 47 and 52 cents, repair men 43 and 52 cents, water boy 32 cents. Outdoor miscellaneous—head labourer 41 and 49 cents, labourer, teamster and gatekeeper 40 cents, maintenance man 40 and 43 cents, motor truck operator 46, 56 and 61 cents, crane operator 71 cents, crane operator helper 40 cents, gas locomotive operator 58 and 61 cents, brakesman 50 and 52 cents, single horse and driver 47 cents, double team and driver 67 cents, watchman 41 and 52 cents. Steam power plant—turbine operator 76 and 80 cents, turbine operator (paper) 69 cents, electric boiler operator 47 and 52 cents, fireman 66 cents, firema helper 43 and 48 cents, labourer 40 cents. Electric power plant—motorman 47 and 52 cents, electric operator (paper) 71 cents, primary power operator 72 cents. Repair section—head repairman 74 and 79 cents, repairman 49 and 74 cents, repairman mason 81 cents, repairman roll grinder 78 cents, repairman pattern maker 79 cents, repairman helper 40 and 48 cents, clerk 49 and 57 cents. Office production—draftsman 48 and 79 cents, tracer 47 and 52 cents, fire inspector 67 cents, assistant fire inspector and night watchman 40 cents, order clerk 47 and 56 cents. Townsite—labourer and caretaker 40 cents. Technical

—freeness testers and paper testers 47 to 52 cents, laboratory helpers 46 and 71 cents, sampler 43 and 45 cents, inspector paper machines 71 and 78 cents.

Employees are not expected to do dangerous work. If ordered to do so they may refuse without penalty on the ground of danger. Otherwise they must assume all risks. They must familiarize themselves with their duties and the hazards of same.

A mutual interest board with four members appointed by unions and four by management to be formed to discuss safety, health, etc. and once a year starting in 1938 to discuss wage rates. Disputes are to be taken up first by the union with the department superintendent, and then the plant manager, then by the International president of the union with the vice president of the company in charge of manufacturing, in successive steps if an adjustment is not previously made. If no settlement is reached in this manner, the dispute will be referred to a board of arbitration consisting of one representative of the company, one of the union or unions involved and a third chosen by them, the decision of such board to be final and binding. No stoppage of work is to occur during the period of the agreement until all the above methods have been used to settle a dispute, and then only with the approval of the international officers of the union.

THREE RIVERS AND GATINEAU, QUEBEC.—THE CANADIAN INTERNATIONAL PAPER COMPANY, THE INTERNATIONAL FIBRE BOARD LIMITED (GATINEAU) AND THE QUEBEC PROVINCIAL COUNCIL OF PAPER MILL UNIONS, THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 163 AT THREE RIVERS AND LOCAL 251 AT GATINEAU) AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 163 AT THREE RIVERS AND LOCAL 142 AT GATINEAU).

Agreement to be in effect from April 9, 1937 to April 30, 1938 and thereafter from year to year, subject to notice.

The agreement is the same as the one summarized above for Dalhousie, N.B., with certain differences in the hourly wage schedule, among which are the following:

Steam power plant—turbine operator (paper) 74 cents, electric boiler operator 46 and 52 cents, head fireman 74 cents, repairman 53 cents, steam inspector 44 and 64 cents. Electric power plant—motor man 48 and 50 cents, transformer man 52 cents, primary power operator 74 cents, electric operator (groundwood) 71 cents. Coal preparing—plant operator 74 cents, pulverizer mill operator and weigher 56 cents, conveyorman 46 cents, coal tower operator 74 cents, scraper man, engineer and dump man 46 cents, head coal handler 49 cents, coal handler 40 cents. Repair section—head repairman 74 cents and 84 cents, clerk 49 and 52 cents. Office production—draftsman 40 and 45 cents, fire inspector 47 cents, assistant fire inspector 43 cents, waste material man 63 cents, control man 46 and 58 cents, telephone operator 31 and 32 cents. Core machines—head core maker 56 and 65 cents, core maker 43 and 49 cents, core maker helper and labourer 40 cents. Technical—paper testers 47 and 52 cents, laboratory helpers 46 and 56 cents.

At the Gatineau mill: Wood handling—head wood handler 40 and 61 cents, wood handler 40 and 41 cents, conveyor man 40 cents, scaler or counter 43 and 44 cents, sawyer helper 40 cents, saw filer 56 and 61 cents, oiler 43 and 44 cents, drag operator 46 and 47 cents, motor man 48 cents, wood fireman 62 cents, wood fireman helper 43 cents. Wood room—wood handler 40 and 41 cents. Groundwood screens and deckers—screenman 52 and 55 cents. Sulphite screens—head screenman 61 cents, screenman 49 cents. Sulphite presses—pressman 44 cents, stock handler 40 and 41 cents. Beaters—beaterman 44 cents, broke beaterman 41 cents, stock regulator 61 and 90 cents. Paper machines—machine tender $1.74, back tender $1.56, third hand $1.15, fourth hand 70 cents, fifth hand 61 cents, six hand 47 cents, head clothing man $1.15, clothing man 61 and 70 cents, clothing man helper 41 and 52 cents. Finishing—marker 46 and 49 cents, cutter man 48 to 56 cents, rewinder man 47 to 56 cents, first core cleaner 40 cents, finishing clerk 52 and 56 cents. Indoor miscellaneous—oiler 41 to 45 cents, filter man 51 cents, filter man helper 41 cents, other classes 40 and 41 cents. Paper handling—head paper loader 47, 51 and 61 cents, paper loader 42 and 45 cents, checker 46 and 49 cents, car man 42 and 44 cents. Marine and wharf—head paper loader 45 cents, paper handler 40 cents, head checker 52 cents, crane operator 47 and 55 cents. Outdoor miscellaneous—head maintenance man 61 cents, electric truck operator 43 cents, crane fireman 56 cents; drivers with single horse or team to be paid at local rates. Steam power plant—head operator 84 cents, fireman 66 cents, fireman helper 48 cents, oilers 48 and 56 cents, coal hoist 52 cents, boiler cleaner 43 cents, waste handler 41 and 43 cents, coal handler 40 cents. Electric power plant—motor man 48 and 50 cents, transformer man 52 cents, electric operator (paper) and primary station operator 84 cents, electric operator

(groundwood) 56 cents. Repair station—head repairman 74 and 84 cents, repairman roll grinder 90 cents, apprentices 18 and 39 cents, diver $1.07. Office production—sample clerk 42 to 50 cents, fire inspector 61 cents, night watchman 46 cents, control man 56 cents, telephone operator 36 cents. Townsite—caretaker 41 and 45 cents. Technical—paper testers 47 and 52 cents, laboratory helpers 46 and 56 cents.

At the International Fibre Board Ltd. Mill, Gatineau: stone grinderman 45 and 47 cents, deckerman 41 and 43 cents, beaterman 45 cents, wet machine and beater helper 43 cents, stock handlers 41 cents, shredder men 43 cents, press operators 62 and 75 cents, kiln operators 51 cents, size maker 47 cents, cleaner 40 cents, oilers 45 cents, printer 57 cents, yard foreman 49 cents, truck driver 56 cents, single horse driver 47 cents, labourer 40 cents, clerk (finishing room) 55 cents, shipping clerk 61 cents, clerk (office) 55 cents, control man 56 cents, tester 49 cents. Repairs—master mechanic and chief electrician 98 cents, electricians 57 and 65 cents, electricians' helper 42 cents, saw filer 55 cents, millwright 56 and 60 and 65 cents, pipefitter 61 cents, pipefitter helper 46 cents, tinsmith 61 cents, mechanic 56 cents, machinist 65 cents, carpenter 55 cents. Finishing and shipping—foreman 57 and 60 cents, sandermen and graders 49 cents, shaper men 55 cents, electric truck operator 52 cents, cut-off saw operators 45 and 47 cents, cut-off saw operators helpers 41 cents, chain men, trimmers, shaper helpers, finishers 41 cents, paper cutter 45 cents, special finishers 43 and 65 cents, samplers 43 cents, wrappers or tiers 47 cents, loaders 43 cents.

Temiskaming, Quebec.—Canadian International Paper Company and the Quebec Provincial Council of Paper Mill Unions and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers (Local 233).

Agreement to be in effect from April 9, 1937 to April 30, 1938 and thereafter from year to year subject to notice.

This agreement is similar to the one summarized above for Dalhousie, N.B., except for the wage schedule effective from May 1, 1937.

Wages per hour: Filter plant—screen men 41 cents. Boiler house—runners 68 cents, firemen 58 cents, assistant firemen 48 cents, repairman 63 cents, helpers 48 cents, boiler cleaners 43 cents, tester 44 cents, coalmen 40 and 41 cents, ashmen 40 cents. Wood room—runners 60 cents, grinder 45 cents, oiler 61 cents, shortends 39 cents, repairman 61 cents, chippermen 42 cents, other classes 41 cents. Wood handling—crane operators and cable crane operators 70 cents, locomotive engineers 60 cents, track foreman 55 cents, brakemen 51 cents, logpile signalmen 43 cents, others 40 and 41 cents. Acid plant—acid makers 73 cents, refrigerator operators 60 cents, sulphurmen 46 cents, others 41 and 42 cents. Digesters—cooks 65 and 95 cents, helpers 49 cents, testers 41 cents, repairman 70 cents. Preparing—runners (mill) 76 cents, stock runners 55 cents, pitmen 45 and 47 cents, screenmen and testers 41 cents, repairman 61 cents, helper 53 cents, night oilers 45 cents, cleaners 40 cents. Bleachery—runners 54 and 65 cents, assistant runners 48 cents, helpers 42 and 44 cents, screenmen 41 and 45 cents, testers 44 cents, bleach mixer 54 cents, helper and tester 41 cents. Nova cell operating—helpers 41 and 46 cents. Caustic fusion—runners 55 cents, helpers 42 cents. Electrolytic—runners 63 cents, cellmen 49 cents, general operators 49 cents, saltmen 40 cents, line slackers 42 cents, repairman 55 cents, helper 41 cents. Dry machines—machine tenders 78, 93 and 95 cents, back tenders 57, 64 and 67 cents, layboy operators 45 cents, truckmen layboy 44 cents, cuttermen 41 cents, pressmen 44 cents, dry truckers 41 cents, broke hustlers 41 cents, monorail operator 48 cents. Shipping—checkers 55 cents, truckers and sample cutters 44 cents. Rebaling—41 and 44 cents. Yard—foreman and gas truck driver 49 cents, teamsters and labourers 40 cents. Supply store—storeman 45 cents. Miscellaneous—general oiler 45 cents, watchman 44 cents, office cleaner 40 cents. Screenings—runners 49 cents, loaders and cutters 41 cents. Laboratory—head tester 57 cents, tester 40 and 57 cents, sample boys 28 cents. Electrical department—electricians-armature winder 63 and 71 cents, helpers 40 and 48 cents. Repair crew—head repairman 79 and 88 cents, repairmen 49 and 86 cents, repairmen helpers 40 and 55 cents, apprentices 16 cents and up. Barking plant—runners 55 cents, tallymen 44 cents, repairmen 55 and 68 cents, oilers 43 cents, inspector 42 cents, boom boss 43 cents, others 41 and 42 cents. Wood handling—crane operators and cable crane operators 70 cents.

Workmen's Wages Act, Quebec

The following agreements have recently been made obligatory by Orders in Council and are summarized in the next article of this issue:

Butchers, Sorel.

Glove cutters (work gloves), Province of Quebec.

Ornamental Iron and Bronze Workers, Montreal.

Building Trades, Sorel.

Longshoremen, Sorel.

Taxi drivers, Sorel.

Shoe Repairers, Montreal.

Industrial Standards Act of Ontario

The following schedules have been made binding by Orders in Council and are summarized on page 923.

Barbers, Lindsay.

Barbers, Woodstock.

Barbers, Belleville.

Barbers, Orillia.

Industrial Standards Act of Alberta

The following schedule has been made binding by an Order in Council and is summarized on page 924.

Lathers, Calgary.

WORKMEN'S WAGES ACT, QUEBEC

Agreements Recently made Obligatory and other Proceedings

AN Act respecting Workmen's Wages which was summarized in the July issue of the LABOUR GAZETTE, page 745 replaces the Collective Labour Agreements Extension Act but stipulates that the agreements and regulations made under the former Act continue in effect for the period for which they were made. Under the Workmen's Wages Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant Governor in Council through the provincial Minister of Labour to have those terms of such agreement which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published, and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette*. The agreement may be amended through the same procedure. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette*, the committee is constituted a corporation. A joint committee may require certificates of competency from workmen within the scope of the agreement if in towns of 5,000 or more, and such by-law must be approved by Order in Council and published in the *Quebec Official Gazette*. The first proceedings under this Act were noted in the last issue of the LABOUR GAZETTE.

Recent proceedings under the Act include the extension by Orders in Council of agreements affecting butchers at Sorel, glove cutters (work gloves) throughout the province, ornamental iron and bronze workers at Montreal, building trades at Sorel, longshoremen at Sorel, taxi drivers at Sorel and shoe repairers at Montreal, the approval by Orders in Council of the by-laws of certain joint committees as noted below. Notices of application for the extension of an agreement affecting aircraft workers at Longueuil was published in the *Quebec Official Gazette*, July 10, and of agreements affecting bakers at Quebec and cloakmakers throughout the province in the issue of July 17. Notices of application for amendments to the agreements affecting building trades at Sherbrooke and building trades at Montreal were also published in the issue of July 17.

BUTCHERS, SOREL.—An Order in Council approved July 8, and published in the *Quebec Official Gazette*, July 17, makes obligatory on all employees and employers in the trade the terms of an agreement between certain employing butchers and le Syndicat National Catholique des Maîtres et Employés Bouchers de Sorel, Inc. (the National Catholic Union of Master Butchers and Butcher Shop Employees of Sorel, Incorporated).

The terms of the Order in Council are in effect from July 17, 1937 to July 16, 1938, and thereafter from year to year, subject to notice.

The territorial jurisdiction comprises the city of Sorel and the village of St. Joseph de Sorel.

Hours: 48 per week. Butcher shops to be open from 8 a.m. to 6 p.m. from Monday to Thursday and from 8 a.m. to 10.30 p.m. Friday and Saturday.

Overtime, that is work after 8 p.m., to be paid at time and one-half.

Wages: journeymen butchers 35 cents per hour, apprentice butchers 10 cents per hour during first year, 15 cents during second year, 20 cents during third year.

Not more than one apprentice for each four journeymen in a butcher shop.

GLOVE CUTTERS (WORK GLOVES), PROVINCE OF QUEBEC.—An Order in Council, approved July 8 and published in the *Quebec Official Gazette* July 17, makes obligatory the terms of an agreement between certain glove manufacturers and Le Syndicat Catholique et National des Gantiers de Montréal (section des gros gants) (The National Catholic Union of Glove Makers of Montreal, work gloves section) and Le Syndicat Catholique et National des Gantiers des Trois-Rivières (section des gros gants) (The National Catholic Union of Glove Makers of Three Rivers, work gloves section).

The terms of the Order in Council to be in effect from July 17, 1937 to December 31, 1938 and thereafter from year to year subject to notice.

The agreement is similar to the one previously in effect and summarized in the Labour Gazette, September, 1936, page 833, with the following exceptions:

Hours: the 48 hour week is to be continued to September 30, 1937, but from October 1, the working week is to be reduced to 44 per week.

Overtime: a bonus of 20 cents per hour to be paid for all overtime over 48 hours in any week until September 30 and over 44 hours in any week from October 1, 1937.

Wages: Retroactive to July 1, 1937, the wage rates (piece rates) are increased by 15 per cent. Work on samples to be paid at 50 cents per hour.

Manufacturers must have their gloves and mitts cut only in their own shops.

Ornamental Iron and Bronze Workers, Montreal District.—An Order in Council approved July 8 and published in the *Quebec Official Gazette* July 17, makes obligatory on all employers and employees in the trade in the district the terms of an agreement between the Builders' Exchange Incorporated, Ornamental Iron and Bronze section, and the Canadian Ornamental Iron and Bronze Workers Union of Montreal.

This agreement, effective from July 17, is made retroactive to May 1, 1937, and is in effect until March 31, 1938, and for a further period of 30 days pending adoption of an Order in Council to replace this one.

The agreement applies only to shop employees.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one half until midnight; from midnight to 8 a.m., double time. Work on Sundays and seven specified holidays, double time.

The territorial jurisdiction includes the Island of Montreal and Ile Bizard, the Counties of Assumption, Terrebonne, Laval, Deux Montagnes, Argenteuil, Vaudreuil, Soulanges, Beauharnois, Chateauguay, Laprairie, Chambly, Verchères, Saint John, Iberville and Richelieu.

Minimum wage rates: mechanics 66 cents (an increase of 6 cents per hour over the previous rate), fitters 55 cents (an increase of 5 cents), helpers 45 cents (an increase of 5 cents). All contracts entered into by an employer and one or more employees on a piece work basis are invalid.

One apprentice allowed to each seven mechanics in each shop. If less than seven mechanics employed in a shop, one apprentice allowed. Apprentices to serve four years (208 weeks).

Wage rate for first year apprentices: 20 cents per hour.

Building Trades, Sorel.—An Order in Council approved July 8, and published in the *Quebec Official Gazettee* July 17, makes obligatory the terms of an agreement between certain contractors and le Syndicat National et Catholique de Métiers de la Construction de Sorel, Inc. (The National Catholic Union of Building Trades of Sorel, Incorporated).

The Order in Council is in effect from July 17, 1937 to July 16, 1938, and thereafter from year to year subject to notice.

Territorial jurisdiction includes the city of Sorel and a radius of one mile from its limits in the county of Richelieu only.

Hours: 8 per day, a 44 hour week.

Overtime and all work on Sundays and nine specified holidays, double time.

Wages per hour: plasterers and spraymen 60 cents; bricklayers and masons and sand splicing, stationary enginemen, shovel and hoisting enginemen, 55 cents; carpenters and joiners, caulkers, sheet metal workers, tinsmiths and roofers, roofers (slate, composition and asbestos), electricians, linemen, joint pointers, marble setters, tile setters, terrazzo layers and terrazzo polishers on machine, granite cutters, ornamental iron workers (erectors), plumbers and steamfitters, sprinkler fitters or automatic refrigeration, cement finishers, enginemen on portable machines, pipefitters, drivers with two horses, 50 cents; painters, wood and metal lathers, engineers (gas mixer), glaziers and decorators, 45 cents; mortar makers, celanite mixers, plaster pourers, hod carriers, enginemen (compressors), joiners working for sash and door manufacturers, carters with two horses, 40 cents; truck drivers, ornamental iron workers' helpers, drivers of one horse, labourers, 35 cents.

A foreman to be paid at least 10 cents per hour over the minimum rate fixed for his trade.

Hourly wages for apprentices; apprentice plasterers—20 cents during first year, 25 cents during second year, 30 cents during third year and 35 cents during fourth year; apprentice painters, roofers (slate), marble setters, metal lathers, bricklayers, masons, tile setters, spraymen and glaziers and decorators 15 cents during first year, 20 cents during second year, 25 cents during third year and 30 cents during fourth year; apprentice carpenters and joiners, electricians, steamfitters, pipefitters and sprinkler fitters or automatic refrigeration 10 cents per hour during first year, 15 cents during second year, 20 cents during third year and 25 cents during fourth year; apprentice asbestos roofers, wood lathers and cement finishers 15 cents during first year; 20 cents during second year and 25 cents during third year. Improvers in steamfitting, pipe-fitting, sprinkler fitting and automatic refrigeration to be paid 35 cents per hour during first six months and 45 cents during second six months.

Travelling expenses and time of workmen sent out of town to be charged to contractors only.

One apprentice allowed for each journeyman in the plumbing and electrical trades. In all other trades one apprentice allowed only for each five journeymen. Apprentices must be registered and enter into an agreement of apprenticeship with their employers before the joint Committee or an association. If the employer of the apprentice has no more work for him, the Joint Committee will endeavour to secure temporary work for him with another employer, but if the apprentice is unable to secure such work the original employer will take him back.

Maintenance men employed in religious and charitable institutions and colleges shall be paid a minimum of $18 per week for skilled workmen and $12 for unskilled, with a 48 hour week. The employer may deduct $2 per month per room if the employee lives in the establishment and 25 cents per meal if the employee boards in the establishment.

Any higher wages paid to workers governed by the present agreement are not be reduced after this agreement goes into effect.

LONGSHOREMEN, SOREL.—An Order in Council approved July 8 and published in the *Quebec Official Gazette* July 17, makes obligatory the terms of an agreement between certain steamship and stevedoring companies and Le Syndicat Catholique et National des Débardeurs de Sorel, Inc. (The National Catholic Union of Longshoremen of Sorel, Incorporated).

The agreement is in effect from April 30, 1937 to January 31, 1938 and thereafter from year to year subject to notice.

The agreement covers the loading and unloading of all ships (including the handling of grain) engaged in ocean, inland and coastal navigation in the harbour of Sorel.

Overtime: work on Sundays and three specified holidays, time and one-half. Time and one-half to be paid also for work during meal hour and thereafter until relieved.

Wages per hour: for loading grain 50 cents for work between 7 a.m. and 6 p.m.; 60 cents for work between 7 p.m. and midnight; 70 cents for work between midnight and 6 a.m.; for unloading grain out of lake and ocean steamers into the elevator 45 cents for work between 7 a.m. and 6 p.m.; 48 cents for work between 7 p.m. and midnight, 55 cents between midnight and 6 a.m.; for handling dynamite 60 cents; for handling nitrate of soda, china clay, coal, fertilizer, potash, iron ore, paper pulp, wood pulp, square timber, oil in drum barrels, molasses, sulphur, shifting bunker coal and any other general cargo, 50 cents; foremen to be paid 10 cents per hour extra.

Longshoremen reporting for work at 7 a.m., 1 p.m. and 7 p.m. will wait one half hour without pay, but if required to wait longer, regular rates of pay for such extra waiting time.

Hatch beams must be taken off or bolted when men are working in the hatch and using a winch.

The number of men required for gangs and for certain types of work is specified.

Any dispute as to the interpretation of this agreement will be taken up by the longshoremen's representative on the wharves with the employers. If it cannot be settled in this way it will be referred to a joint arbitration board, consisting of one representative of each party and a third chosen by them or by the Minister of Labour. The decision of this board to be binding.

TAXI DRIVERS, SOREL.—An Order in Council approved July 24 and published in the *Quebec Official Gazette,* July 31, makes obligatory the terms of an agreement between certain employers and Le Syndicat National et Catholique des Maîtres et Employés-Chauffeurs de Sorel, Inc. (The National Catholic Union of Master and Employed Taxi and Truck Drivers, Inc.).

The agreement is in force from July 31, 1937, to July 30, 1938, and thereafter from year to year subject to notice.

The territorial jurisdiction includes the town of Sorel and a radius of one mile of its limits.

Hours: 10 per day, 60 per week. Truck drivers shall not be on duty on Sundays, church holy days and legal holidays.

Overtime: time and one-half after 10 hours, work on Sundays and holidays, double time.

Wages: taxi drivers to be paid 25 per cent of the money they take in, truck drivers 40 cents per hour. The weekly wages of employees governed by this agreement to be at least $15 a week whatever be the duration of labour, except that the minimum for private chauffeurs is $18 per week.

An employer to pay for his employee's meals at 50 cents a meal on a run out of town or in the town if such employee is not back in time for his meal.

A schedule of rates which must be charged by taxi drivers is given, starting at a minimum of 25 cents for one passenger within a certain zone, waiting time over a certain minimum must also be charged for.

SHOE REPAIRERS, MONTREAL.—An Order in Council approved July 24 and published in the *Quebec Official Gazette,* July 31, makes obligatory the terms of an agreement between The Montreal and Provincial Shoe Repairers Association, Inc., and The Shoe Repair Workers Union of Montreal.

The agreement is in effect from July 31, 1937, to July 31, 1938, and thereafter from year to year subject to notice.

The territorial jurisdiction includes the Island of Montreal and such other shops within a radius of 10 miles of the Island of Montreal as obtain the greater proportion of their orders from citizens of the Island of Montreal.

Hours are limited to 10 per day first four days of the week, 11 hours on Friday and 13 hours on Saturday, a 64 hour week as provided in Order in Council under the Hours of Work Act (LABOUR GAZETTE, April, 1936, page 328).

Minimum weekly wage rates: experienced workmen $15 except finishers for whom the minimum is $12; from December 1 to March 31 the minimum for experienced workmen is $10 and for experienced finishers $9.

Minimum weekly wages for apprentices: $6 during first year, $8 during second year, $10 during third year except that in the third year of apprenticeship, from December 1 to March 31 apprentices to receive $9, apprentice finishers $8.

A schedule of minimum prices to be charged customers for each piece of work is set forth in the agreement.

A joint committee to be formed as provided in the Act with power to grant certificates stating to which class a workman or apprentice belongs.

JOINT COMMITTEES.—The constitutions and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the issues of the *Quebec Official Gazette* mentioned:

Building Trades, Montreal (July 10).

Glove Cutters (fine gloves), Province (July 10)

Granite Cutters, Province (July 17)

COMPETENCY CARDS.—An Order in Council as noted in the *Quebec Official Gazette,* July 31, makes the competency card obligatory in the following trades:

Building Trades, Sherbrooke.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the Labour Gazette, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of Labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council, may declare such schedule to be in force "during pleasure" or for a period not exceeding twelve months stipulated in the schedule and thereupon such schedule shall be binding upon every employee and employer in such industry in the whole or any part of the province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the Labour Gazette, summaries are given in this article of the schedules which have thus been approved.

Barbers, Lindsay: An Order in Council approved July 22 and published in *The Ontario Gazette* July 31, makes binding a schedule of wages and hours governing the barbering trade in the town of Lindsay.

The Order in Council is in effect from August 10, 1937 "during pleasure."

Hours are those during which barber shops are permitted to be open under municipal by-law. No work on Sundays, eight specified holidays or after noon on Wednesdays except that work may be done all day Wednesday of the week in which a holiday occurs.

Minimum wage rates: For persons given full time employment on a straight salary basis, $18 per week. For persons given full time employment on a percentage or commission basis or paid a salary plus a percentage or commission, $12.50 per week plus 50 per cent of proceeds in excess of $19 from the work performed by the employee plus an additional 10 per cent of such proceeds in excess of $30. For nights and Saturday employees, that is those who work four hours per day or less from Monday to Friday inclusive and all day or less on Saturday, $7.50 per week plus 50 per cent of the proceeds in excess of $12.50 from the work performed by the employee. For persons working on Saturdays or the day before a holiday and on the previous evening only, $5 per week plus 50 per cent of the proceeds in excess of $7.50 from the work of the employee. For persons employed only on Saturday or the day before a holiday $4 per day or part thereof plus 50 per cent of the proceeds in excess of $6 from the work of the employee. For persons working on days other than Saturdays or the day before a holiday, $2.50 per day or part thereof plus 50 per cent of the proceeds in excess of $4 from the work of the employee.

No deduction from wages for materials supplied, laundry or operating expenses.

A schedule of minimum charges to customers for the different pieces of work is included and no lower prices may be charged or premium be given customers.

An Advisory Committee to be appointed as provided in the Act.

Barbers, Orillia: An Order in Council, approved July 22 and published in *The Ontario Gazette* July 31, makes binding a schedule of wages and hours governing the barbering trade in the town of Orillia.

The Order in Council is in effect from August 10, 1937, "during pleasure."

This schedule is the same as the one summarized above for Lindsay, with the exception that for persons given full time employment on a percentage or commission basis or paid a salary plus a percentage or commission, the minimum is $13 per week instead of $12.50, plus the same percentage as provided for Lindsay barbers.

Barbers, Woodstock: An Order in Council, approved July 22 and published in *The Ontario Gazette* July 31, makes binding a schedule of wages and hours governing the barbering trade in the town of Woodstock.

The Order in Council is in effect from August 10, 1937, "during pleasure."

The schedule is the same as the one summarized above for Lindsay with these exceptions:

In all cases where a percentage of 50 per cent is specified for Lindsay barbers, Woodstock barbers receive 60 per cent. Instead of barbers receiving an additional 10 per cent of proceeds over $30 they receive 5 per cent in Woodstock.

Barbers, Belleville: An Order in Council, approved July 22 and published in *The Ontario Gazette* July 31, makes binding a schedule of wages and hours governing the barbering trade in the city of Belleville.

The Order in Council is in effect from August 10, 1937, "during pleasure."

The schedule is the same as the one summarized above for Lindsay with these exceptions:

The Wednesday holiday begins at 12.30 instead of noon. In all cases where a percentage of 50 per cent is specified for Lindsay barbers, Belleville barbers receive 60 per cent. Instead of barbers receiving an additional 10 per cent of proceeds over $30, they receive 5 per cent in Belleville.

INDUSTRIAL STANDARDS ACT OF ALBERTA

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Alberta, 1935, is similar to the Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, 1935, page 534, where are also noted the minor differences between the Ontario and Alberta Acts. The Act provides that the Minister of Trade and Industry for Alberta may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in any industry in any zone or zones, to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry and district. If, in the opinion of the Minister, a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation the Lieutenant Governor in Council may declare such schedule to be in force for a period not exceeding twelve months, and thereupon such schedule shall be binding upon every employee and employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after the publication of the Order in Council in *The Alberta Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Previous schedules under this Act have been summarized in the LABOUR GAZETTE, September, 1935, April, July, September, November, and December, 1936, May and July, 1937.

WOOD AND METAL LATHERS, CALGARY.—An Order in Council dated July 7 and published in *The Alberta Gazette*, July 15, makes binding the terms of a schedule of wages and hours governing the wood and metal lathing industry in the city of Calgary and within 25 miles of the Calgary post office.

The Order in Council is in effect from July 25, 1937, to July 24, 1938.

Hours: 8 per day from Monday to Friday inclusive, a 40 hour week.

Overtime: time and one-half; work on Sundays and recognized statutory holidays, double time. Employees required to set hangers in connection with the pouring of concrete on Saturdays may work, being paid straight time for morning and time and one-half for afternoon and evening. Emergency work that can only be done at night to be paid at 8 hours pay for 7 hours work.

Wages: for all metal furring and tied on lath work and attached ceilings, 90 cents per hour; for all classes of work which is nailed on wood furring, such as wood lath, all plaster and instrippings, etc., 75 cents per hour. No piece work permitted.

Transportation to be furnished to all points outside the city limits and travelling time to and from jobs outside a five mile radius.

All work contracted for and accepted prior to this schedule coming into force to be completed at a rate set by the Board.

According to a statement issued by the Dominion Bureau of Statistics, there was a total of 155 air harbours in Canada at the close of 1936, not including those under construction for the trans-Canada route. Licensed aircraft, including private flying club, commercial and Dominion and provincial engaged in civil aviation numbered 450 as against 380 in 1935. These do not include military air craft.

Commercial aircraft flew 7,100,401 miles and carried 22,947,105 pounds of freight and 1,107,060 pounds of mail, which was 28 per cent more traffic than carried in 1935. The number of paying passengers carried by commercial aircraft was 97,888 and non-pay passengers 11,835. The personnel miles flown, including paying and non-paying passengers and crew was 18,373,117 and the ton miles for freight and mail was 1,155,624. Most of the freight consisted of mine supplies and products to and from mines in northern Quebec, Ontario and Western provinces and North West Territories. The average flight with passengers was 88 miles and with freight 93 miles.

During the year, 16 persons were killed and 21 injured in civil aviation, of which commercial air lines were responsible for 10 deaths and 16 injured, including six mechanics injured in shops, etc. The commercial aviation averages show per one million passenger miles 0·522 passengers killed and 0·835 passengers injured, and per million crew miles, 0·569 crew killed and 0·227 crew injured.

New motor vehicle sales in Canada, after declining slightly in April as compared with a year ago and making small gains during May, moved up sharply in June to show advances over June, 1936, of 43·3 per cent in number and 37·2 per cent in retail value. The decline from May of this year was less than seasonal. There were 17,949 new vehicles sold for $18,064,055 in June as compared with 12,523 at $13,167,624 for June, 1936, and 21,531 for $21,980,324 in May, 1937.

PRICES, RETAIL AND WHOLESALE IN CANADA, JULY, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

In retail prices the cost of the weekly family budget of staple foods, fuel and lighting and rent was slightly higher than in the previous month due to the somewhat higher cost of foods while the Dominion Bureau of Statistics weekly index number of wholesale prices continued to advance until the middle of the month and then declined influenced to a large extent by the movement in grain prices.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8.56 at the beginning of July as compared with $8.52 for June; $7.97 for July, 1936; $6.67 for March, 1933 (the low point in recent years); and $10.91 for July, 1930. The most important changes in the month under review as compared with the previous month were advances in the cost of meats, eggs, and cheese and declines in milk, potatoes, and rolled oats. Including the cost of fuel and rent with that of foods the total budget cost $17.24 for July; as compared with $17.20 for June; $16.51 for July, 1936; $15.41 for June, 1933 (the low point in recent years); $21.26 for July, 1930; $20.67 for July, 1922; $26.92 for July, 1920 (the post war peak); and $14.17 for July, 1914. In fuel anthracite coal again averaged slightly lower.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base 1926 as 100 advanced during the first half of July continuing the upward movement which commenced during the second week in June. For the week ended July 16 the index number was 87·7 the highest point reached in recent years. From that date to the end of the month the movement was downward the figures for the index being 86·7 for the week ended July 30. For the week ended July 2 the index was 86·2 and for that ended June 11, 84·1 which was the low point of the decline since early in April. The latest figures available on a monthly basis are for June when the index number was 84·6 as compared with 74·4 for July, 1936; 63·5 for February, 1933 (the low point in recent years); 97·2 for July, 1929; 98·7 for July, 1922; 164·3 for May, 1920 (the post war peak); and 64·4 for July, 1914. Fluctuations in the prices of grains were the principal factors in the movement of the index number during the month. In the grouping according to chief component materials the vegetable products group recorded the greatest changes during the month the index for the group advancing from 91·5 at the beginning to 96·4 at the end of the second week and then declining to 92 for the week ended July 30. Changes in other groups were relatively slight all groups being somewhat higher at the end of the month than at the beginning.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of July of seventy-two staple foodstuffs groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of camparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the Labour Gazette, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the Labour Gazette for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits

are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Beef prices in July again advanced continuing the upward movement in progress since the beginning of the year except for a minor recession in March. Sirloin steak averaged 29·3 cents per pound in July, 28·3 in June and 22·9 cents in January. Rib roast averaged 21·9 cents per pound in July, 21 cents in June and 17 cents in January. Mutton was one-half cent per pound higher in July at an average price of 24·7 cents per pound. Fresh pork was again higher averaging 22·6 cents per pound as compared with 21·8 cents in June. Bacon has changed little in price during the year averaging 29·1 cents per pound in July. Prices, however, were considerably higher in the western provinces than elsewhere in the Dominion. Fresh eggs averaged 27 cents per dozen in July as compared with 25·2 cents in June. Increases were greater in Ontario and other eastern provinces than in the western. Milk averaged

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

(*Continued on page 934*)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended July 30, 1937; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 926)

fractionally lower at 10·7 cents per quart. Cheese advanced in the average from 22·6 cents per pound to 23 cents. Canned vegetables have changed little in price during the last six months. Potatoes were again lower in most localities, the Dominion average being $1.44 for 90 pounds in July as compared with $1.53 in June and $1.95 in July, 1936. Lower prices for United States anthracite coal were reported from several cities and the average price was down from $14.11 per ton to $14.03.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries appeared in the July issue of the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930 = 100, was 110·6 for June, a decrease of 0·1 per cent for the month. The cereal group declined 2·3 per cent, the meat, fish and eggs group declined 0·7 per cent, while the group covering other food and tobacco increased 2·4 per cent. The combined food groups and the combined industrial materials groups each declined 0·1 per cent.

The *Statist* index number on the base 1867-1877 = 100 was 104·3 at the end of June, a decline of 1·3 per cent for the month. Decreases were recorded in all groups except the sugar, coffee and tea group which was unchanged. The "All Foodstuffs" group declined 2·4 per cent while the "All Materials" group declined 0·7 per cent.

Cost of Living.—The Ministry of Labour's index number on the base July, 1914 = 100, was 155 at the beginning of July, an increase of 2·0 per cent over the previous month.

France

Wholesale Prices.—The General Statistical Office index number, on the base 1914 = 100, was 538 for June as compared with 529 for May, an increase of 1·7 per cent for the month. The combined food groups increased 3·0 per cent while the combined industrial materials groups increased 0·6 per cent.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 106·1 for June, an increase of 0·2 per cent for the month. The agricultural products index increased 0·5 per cent during the month, while the raw materials and semi-manufactured goods index remained unchanged and the manufactured goods group increased 0·2 per cent.

Cost of Living.—The official index number on the base 1913-1914 = 100, was 125·3 for June, an increase of 0·2 per cent over the May figure. The food, clothing, and sundries groups showed slight increases, the light and fuel group showed a slight decrease and the rent group was unchanged.

India

Wholesale Prices.—The index number of the Labour Office, Government of Bombay, on the base July, 1914 = 100, was 108 for April a decrease of 1·8 per cent from the March figure.

Cost of Living.—The official index number of the working class cost of living at Bombay, on the base 1914 = 100, was 104 for May, showing no change from the previous three months' level.

United States

Wholesale Prices.—The Bureau of Labour Statistics index number on the base 1926 = 100, was 87·4 for May, a decrease of 0·7 per cent for the month. This figure is 1·7 per cent above the year's low of January and 11·2 per cent above the level for May 1936. The farm products, foods, textile products, chemicals and drugs, metal and metal products and miscellaneous commodities groups declined fractionally. Minor increases were recorded by the hides and leather products, fuel and lighting materials, building materials and house-furnishing groups. Wholesale market prices of raw materials and semi-manufactured articles fell sharply during May, but both groups are above their levels of a year ago. Finished product prices continued to rise during May and are approximately 9 per cent above the corresponding month a year ago.

Dun and Bradstreet's index number (in continuation of Bradstreet's index number) which is based on the sum total of the prices per pound of 96 articles of common use was 11·3374 at June 1, a decrease of 1·6 per cent for the month. Of the thirteen groups, eight showed decreases, three showed increases and two were unchanged. The breadstuffs, the textile, and the building materials groups each declined 5·4 per cent; the oils group increased 2·6 per cent; other changes were comparatively small. As compared with the index of June 1, 1936, the June 1937 index shows an increase of 16·4 per cent.

Dun's index number based on the cost per capita of a year's supply of commodities was $201.516 at June 1, a decrease of 1·2 per cent for the month. The metals group increased 0·1 per cent while all the other groups declined. The decreases in the various groups were as follows:—Breadstuffs 4·7 per cent; clothing, 1·6 per cent; meat, 1·4 per cent; dairy and garden products, 1·4 per cent; miscellaneous, 0·8 per cent; other food, 0·6 per cent. This index showed an increase of 17·1 per cent in the past year.

Cost of Living.—The index number of the Industrial Conference Board on the base 1923 = 100, was 88·9 for June, an increase of 0·1 per cent for the month. The food group declined 0·2 per cent, while the housing and clothing groups increased 0·6 and 0·3 per cent respectively. The fuel and light, and the sundries groups were unchanged.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1937

The number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the second quarter of 1937 was 284, there being 82 in April, 82 in May, and 120 in June.

The report for the first quarter of 1937, showing 229 fatalities, was given in the LABOUR GAZETTE, May, 1937, page 590. In the second quarter of 1936, 235 fatal accidents were recorded (LABOUR GAZETTE, August, 1936, page 762). The supplementary lists of accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contain 13 fatalities for the first quarter of 1937 and 7 fatalities for 1936.

In this series of reports it is the custom to record industrial accidents under the date of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the second quarter of 1937 were as follows: agriculture, 25; logging, 34; fishing and trapping, 14; mining, non-ferrous smelting and quarrying, 47; manufacturing, 35; construction, 31; electric light and power, 5; transportation and public utilities, 53; trade, 11; service, 19.

Of the mining accidents, 29 were in "metalliferous mining," 13 in "coal mining." and 5 in "non-metallic mineral mining and quarrying, n. e. s."

Of the accidents in manufacturing, 1 was in "textiles and clothing," 1 in "leather, fur and products," 3 in "rubber products," 10 in "saw and planing mill products," 1 in "wood products," 5 in "pulp, paper and paper products," 6 in "iron, steel and products," 5 in "non-ferrous metal products," 1 in "non-metallic mineral products," and 2 in "chemical and allied products."

In construction there were 12 fatalities in "buildings and structures," 1 in "railway construction," 1 in "shipbuilding," 15 in "highway and bridge," and 2 in "miscellaneous construction."

In transportation and public utilities there were 16 fatalities in "steam railways," 22 in "water transportation," 1 in "air transportation," 8 in "local transportation," 5 in "telegraphs and telephones," and 1 in "express."

In trade there were 4 fatalities in "wholesale," and 7 in "retail."

Of the fatalities in service, 11 were in "public administration," 2 in "custom and repair,' 2 in "personal, domestic and business," and 4 in "professional establishments."

There was no serious disaster resulting in a very large number of fatalities during the period under review. Accidents involving the loss of two or more lives were as follows:—

Three river drivers were drowned in Vermillion River, Quebec, when a boat upset in swift current on June 27.

Three fishermen were drowned in Big Indian Lake, Nova Scotia, when their punt capsized in a storm on April 23 and two fishermen were drowned near Liverpool. Nova Scotia, on May 26, when a wave overturned their motorboat while tending lobster traps. Two trappers broke through ice and were drowned while trapping muskrats at Fort Vermillion, Alberta, on May 1.

Two miners were drowned in Night Hawk Lake, Ontario, on June 3, when a motor launch overturned in a squall. On June 5, a field manager and a prospector were drowned from a canoe in Shoal Lake, Ontario. Two miners were killed in a blasting accident at Wingdam, British Columbia, on June 14. On June 11, three miners perished when trapped in the Beban coal mine at Extension, British Columbia, when the mine wall gave way under pressure of flooding waters. The mine was an old shaft, abandoned for a period, and recently reopened. The three miners were drowned and two others were rescued when water broke into the mine from the adjoining abandoned extension workings after new holes had been drilled. The coroner's jury found there had been a laxity in practical judgment of the mine officials and mine inspectors, judging by the known unreliability of the old mine plans and recommended that all workings be completely dewatered where ever practicable in the vicinity of proposed new operations, also that telephones be installed where possible.

On June 4 the manager and a machinist in a rubber horse shoe factory at Hamilton, Ontario, were shot by a demented man who had been a former partner in the firm. When a pile of logs collapsed two labourers were

crushed to death at a paper mill at Wayagamack, Quebec, on April 3.

Two labourers lost their lives at St. Simeon, Quebec, on May 18, when a truck in which they were riding to road construction work crashed over an embankment.

When a train was derailed owing to a washout by spring floods near Beachville, Ontario, on April 26, an engineer and a fireman were killed and a medical officer was drowned when his car was swept off a bridge by the surging flood while answering a call to this train wreck. On May 25 two labourers were crushed to death under a piece of metal when a car's loading equipment gave way under shifting of a load of gravel, near Thorncliffe, Ontario.

Two telegraph linemen lost their lives near Revelstoke, British Columbia, on May 22, when an engine struck a gasoline speeder.

The most serious accident during the quarter under review occurred at Montreal, Quebec, on June 25, when three firemen were killed while fighting a fire following terrific explosions at a large garage, believed to be caused by the ignition of gasoline vapours which had gathered in the chamber where two 1,000-gallon tanks were situated and either heat or a live flame caused the explosion. Thirty-four members of the fire department were injured as well, including the city fire director, who was one of the twelve most seriously injured, also three police officers, and in addition 36 men and 20 women were reported injured. Following wide demands for a complete investigation into the responsibility for the blast and, in endeavour to prevent further repetitions of such blasts by making more stringent regulations pertaining to the storage, handling and distribution of inflammables and explosives, a committee of inquiry has been set up by the civic authorities.

It may be mentioned that during this quarter three fatalities occurred in Canadian waters which are not included in this report, owing to the fact that the men killed were employed on ships registered in other countries, being: A seaman from Finland, on the steamer *Urla,* who died at Sydney, Nova Scotia, on May 27, following injuries received over a month previously, when he fell down a hold of the steamer; a sailor on the British freighter, *Lord Byron,* who fell from the wharf to the deck of the ship at Montreal, Quebec, and was killed on May 31, when his foot caught in a cable of a steam shovel; and a fireman on the Danish freighter, *Brosund,* who died in Halifax harbour on June 15 following an injury from a fall into a stokehole while at sea.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first quarter of 1937 has been compiled which contains 13 fatalities, of which 1 was in agriculture, 1 in logging, 3 in fishing and trapping, 1 in mining, non-ferrous smelting

and quarrying, 3 in manufacturing, 1 in construction, 1 in transportation and public utilities and 2 in service. Five of these accidents occurred in January, 2 in February, and 6 in March.

A further supplementary list of accidents occurring in 1936 has been made. This includes 7 fatalities, of which 1 was in logging, 2 in fishing and trapping, 2 in mining, non-ferrous smelting and quarrying, 1 in manufacturing, and 1 in service. Two of these accidents occurred in February, 1 in September, 1 in October, and 3 in November.

Annual Convention of the Ontario and Quebec Typographical Unions

The Ontario and Quebec Conference of Typographical Unions held its 26th Annual Convention in Montreal, June 25-26, 1937, under the auspices of Jacques-Cartier local union No. 145. Representatives of the typographical locals and other allied trades were welcomed by P. M. Draper, president of the Trades and Labour Congress of Canada, Candide Rochefort, M.L.A., R. Trepanier, president of Montreal Trades and Labour Council, and others.

Mr. Draper told the delegates that in spite of opposition, the international movement was gaining in strength and membership and that in several provinces the right of the employees to a free choice of organization was established under law, while in other provinces the Congress was continuing its efforts to secure similar privileges for the workers. Mr. R. Trepanier, in his address, referred to the special efforts in organization work in Montreal with open meetings for the workers and radio addresses. Mr. Candide Rochefort spoke of the necessity for greater publicity in order that a better presentation of the views of organized labour could be placed before the public. He was of the opinion that under present conditions no local or craft organization could stand alone, and that all should be united in their efforts to bring about better conditions.

In the study of the officers' report the delegates went on record as favouring the establishment of regional and uniform scales of wages, and agreements to meet present conditions of industrial organization.

Dealing with the question of label and publicity work, it was recommended that the need for joint action should be stressed even to the extent of all unions producing union label goods co-operating in issuing joint label propaganda.

In the opinion of the delegates, the question of the A.F. of L. and the C.I.O. was one of jurisdiction and organization policies, in which they were not called upon to make a decision, and that the Conference was chiefly concerned in dealing with local conditions in the two provinces; and that under the sane guidance of Canadian labour officials, the dispute need not spread to Canada and the unity of ~~sulating boards, metal lath corner beads, corner~~ Canadian internationals may be unimpaired regardless of the affiliation of international subordinate unions.

The convention reiterated its previous decision regarding the inclusion of other allied crafts of the industry in the Conference, and the officers were instructed to continue their efforts toward this end. In anticipation of success to this endeavour the question of next year's convention city was left in the hands of the officers in order that a central city could be chosen for the first meeting under the enlarged scope of the Conference.

Officers elected were: President, J. W. Blaquiere, Jacques-Cartier, Montreal; 1st Vice-pres., M. Dunkley, Peterborough; 2nd Vice-pres., Ben. Paquin, Ottawa; Secretary-Treasurer, Ernest J. Teague, Montreal.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Actions under Quebec Collective Labour Agreements Act

FIVE recent judgments of the Quebec Courts deal with claims for wages under the Collective Labour Agreements Extension Act, 1934. This statute was repealed at the 1937 session of the Legislature but under the title of the Workmen's Wages Act it was re-enacted with numerous amendments.

Four of the cases were brought by the Joint Committee of Building Trades in Montreal on behalf of workmen employed in construction work. The Act confers on the joint committee of employers and workers set up in each industry covered by a collective agreement made binding under the statute the power—

> to exercise, for the benefit of each of the employees all rights of action arising in their favour from a collective labour agreement made obligatory, without having to prove an assignment of claim from the person concerned.

On March 9, Mr. Justice Lazure of the Superior Court of the District of Montreal gave judgment in favour of the plaintiff committee for wages at the rate fixed for plumbers in the Montreal Building Trades Agreement. The action was on behalf of a workman who had agreed with the defendant to work at 40 cents an hour instead of 65 cents as stipulated in the collective agreement. The evidence showed that the workman was satisfied with the wage rate, that he was of the opinion that the defendant was not able to pay a higher rate and that if he had paid more he would have failed and the workman would have been unemployed. He did not wish the committee to bring the action and while the case was before the Court the workman intervened to oppose the action. The Court held, however, that the Collective Labour Agreements Extension Act was a matter of public order and that its object, that of protecting the whole body of workmen and employers in the same trade, would be defeated if the employer were free to make contracts at variance with the agreement, even if the workman was willing to do so. On this point the Court had no discretion under the provisions of the Act but, since the statute directed that actions should be decided according to equity and good faith, the judge considered that the workman should be paid at the rate of 65 cents with no overtime rate and that no penalty should be imposed. The defendant was ordered to pay the costs. *Comité conjoint des metiers de construction* v. *dame Bissonet Vallée* (1937) 75 C.S. 209.

A somewhat similar case was decided by Chief Justice Archambault of the Circuit Court of Montreal on May 20. The plaintiff was the Joint Committee of the Building Trades in Montreal acting on behalf of some twelve workmen, seven of whom formally disavowed any connection with the committee and stated that the proceedings were instituted against their wishes. As regards the five others, the claims of three were approved by the Court, one was found not to be valid and the other was dropped by the plaintiff committee.

On the question of the right of a Joint Committee to bring an action for wages for workmen against their will, the Court held that while the Act gave the workmen the right to the wages fixed in the agreement, the exercise of the right to bring an action was optional. In common law, the workman has a right of action against his employer for wages, but the exercise of the right is optional and the law concerning collective agreements does not derogate from this principle. The Joint Committee has the right to act for the workman; it is not obliged to act. In the opinion of the Court the workman cannot force the committee to act; only the ordinary rules pertaining to mandates apply to the Joint Committee and the workman, and by these rules the mandatory committee cannot act against the will of the mandator, the workman. The Court stated:—

> We are not to be understood as saying that compulsory action would not make the law more effective; that is for the Legislature to say—if it has not done so. We decide—and no more, that according to the law applying to the case, the action is optional.

The action on behalf of the seven workmen concerned therefore, failed. *Comité conjoint des metiers de la construction* v. *Carignan* (1937) 75 C.S. 263.

In the district of Terrebonne a claim for $4,782.45 wages and the same amount as liquidated damages by the Joint Committee of the Building Trades on behalf of workmen employed in the building of a church was disallowed by Mr. Justice Duranleau on the ground that the parish authorities against whom the action was brought were not employers "in the industry" as specified in the Act and, therefore, were not bound by the agreement for the construction industry. The judgment was based on that of the Court of King's Bench in *Hodgkin* v. *Coristine Realties, Ltd.*, (Labour Gazette, February, 1937, p. 233). *Comité Conjoint des Metiers de la Construction* v. *Curé et Marguilliers de l'Oeuvre et Fabrique de la Paroisse de St. Julien* (1937) 75 C.S. 218.

Two other cases under the Collective Labour Agreements Extension Act were decided by Chief Justice Archambault in the Circuit Court of Montreal. One case arose from a claim made by the Joint Committee for the baking industry in Montreal for wages ($22) for a man engaged in the delivery of bread. The evidence was to the effect that the defendant baker had engaged an unemployed man to work up a bread route on a commission basis of 12 per cent of sales. There was no mention of the hours to be worked and the amount paid each week had no reference to the time worked and little to the percentage. After three weeks, the man began to buy bread from the defendant and sell it on his own account. The purpose of the contract in the first place being to establish a bread route, the contract was not of the kind contemplated by the statute under which the two important factors in a contract are the hours of labour and the subordination of the workman to the employer. The claim was rejected with costs. *Comité Conjoint de l'industrie de la Boulangerie du district de Montréal* v. *Theoret* (1937) 75 C.S. 255.

The second action was instituted by a painter for $83.40 wages being balance claimed as difference between rate paid and rate fixed by collective agreement made binding under the Act. The defence contended that the plaintiff had been hired as a labourer on maintenance work after repeated applications for work said to be urgently needed and that the plaintiff had stated that he did not possess a painter's certificate of competency without which he was not entitled to a painter's rate. The evidence showed that the plaintiff had such a certificate but had made the false statement with a view to getting the job. Under these circumstances, the Court held that since the wage-rates were fixed by the agreement made between employers and the union, and had been made binding on all employers, and if an employer paid lower rates he was doing so in bad faith, the claim must be paid with interest, but since the plaintiff had himself acted in bad faith by denying that he had a certificate, that he was not entitled to the costs of the action. *Chaput* v. *Trottier* (1937) 75 C.S. 259.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of August showed a moderate advance, continuing the forward movement that with only one exception has characterized the industrial situation since the opening of the year. Statements were tabulated by the Dominion Bureau of Statistics from 10,320 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. They employed 1,143,109 workers, compared with 1,134,466 at July 1. The index, based on the 1926 average as 100, rose from 119·1 in the preceding month to 120·0 at August 1, when it was more than fourteen points higher than at August 1, 1936. The experience of the last sixteen years indicates that employment usually, though not invariably, gains at the beginning of August, there being on the average, a fractional increase in the index; after correction for seasonal influences, the August 1 index therefore showed no change from the preceding month, standing at 114·9; this was higher than at any other date since the first quarter of 1930.

As already stated, the unadjusted index (based on the average in the calendar year 1926 as 100) stood at 120·0 at August 1, 1937, compared with 119·1 at July 1, while at August 1 of the sixteen preceding years, the index was as follows: 1936, 105·6; 1935, 101·1; 1934, 99·9; 1933, 87·1; 1932, 86·3; 1931, 105·2; 1930, 118·8; 1929, 127·8; 1928, 119·3; 1927, 110·5; 1926, 105·5; 1925, 97·5; 1924, 95·8; 1923, 101·4; 1922, 94·2 and 1921, 90·0.

Unemployment in Trade Unions.—At the beginning of August, 1937, the percentage of unemployment reported to the Department of Labour by local trade union members throughout Canada was 8·9 in contrast with percentages of 10·4 at the begining of July, 1937, and 12·5 at the beginning of August, 1936. The percentage for August was based on the reports compiled from 1,811 labour organizations, combining a membership of 203,375 persons.

Employment Office Reports.—Reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business transacted during July, 1937, was higher than that of the preceding month and also of July a year ago, the chief factor in each comparison being the increased placements registered in construction and maintenance, in which group most of the relief work was reported. Vacancies in July, 1937, numbered 39,532; applications 61,963; and placements in regular and casual employment 37,675.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.48 at the beginning of August as compared with $17.24 for July the increase being due to the higher cost of foods. Comparative figures for certain earlier dates are $16.72 for August, 1936; $16.15 for August, 1935; $15.41 for June, 1933 (the low point in recent years); and $21.90 for August, 1929. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 84·8 for the week ended August 27 having declined week by week since the middle of July when the figures were 87·7 for the week ended July 16. The downward movement was due mainly to lower prices for grains, milled products, potatoes and non-ferrous metals. On a monthly basis the index number was 87·5 for July, 1937; 76·2 for August, 1936; 71·7 for August, 1935; 63·5 for February, 1933 (the low point in recent years); and 98·4 for August, 1929.

Business Statistics.—The table on page 944 gives the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business in July was little changed from the relatively high level of the preceding month the increase being less than one per cent. It was, however, 14 per cent higher than in July, 1936. Of the principal factors used in the construction of the index and after necessary adjustments for seasonal variation, mineral production, manufacturing, trade employment, and car loadings were higher in the month under review than in the preceding month, while con-

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended August 27, 1937.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending August 28, 1937, and corresponding previous periods.

(6) Sugar produciton given in periods of four weeks ending August 14, July 17 and June 19, 1937; August 8, July 11 and June 13, 1937. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Subject to revision.

struction, electric power output, imports and exports were lower. The largest increase was in mineral production due mainly to higher exports of copper, zinc and asbestos and to greater imports of bauxite as well as to increased production of coal. All of the above principal factors were higher in July, 1937, than in July, 1936. Information available for August shows the wholesale prices index considerably lower than in July but higher than in August, 1936, while employment, the number of cars of revenue freight, and the value of contracts awarded showed improvement in both comparisons. The manufacture of sugar for the four weeks ended August 18 was much higher than in the previous four weeks but somewhat lower than in the corresponding period in 1936.

Strikes and Lockouts.—The number of strikes and lockouts during August was 39, involving 17,966 workers, with a time loss of 297,827 man-working days, the greatest on record since July, 1925, when nearly 12,000 coal miners in Nova Scotia were on strike. Most of the time loss was due to strikes of textile factory workers in Quebec and Ontario, but there were important strikes involving foundry and shipyard workers at Sorel, P.Q., and lumber workers in New Brunswick. In July there were recorded 37 disputes, involving 6,411 workers, with a time loss of 69,276 days; and in August, 1936, there were 36 disputes, involving 9,864 workers, with a time loss of 72,034 days. Of the thirty-nine disputes recorded for August, thirty-one were recorded as terminated, seven resulting in favour of the employers involved, nine in favour of the workers concerned, while compromise settlements were reached in fourteen cases and the result of one dispute was recorded as indefinite. Eight disputes, involving approximately 2,098 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month the Department has received unanimous Board reports in regard to three disputes—an interim report concerning coal mining on Vancouver Island; and two reports on disputes involving the cities of Port Arthur and Fort William and their street railway employees and electrical workers.

Application for a Board of Conciliation and Investigation has been made by the employees of the Edmonton telephone, and electric light and power departments. Complete information concerning these cases will be found in the article commencing on page 953.

Royal Commission to re-examine basis of Confederation

Appointment of a Royal Commission of four distinguished Canadians to "re-examine the economic and financial basis of Confederation and the distribution of legislative powers in the light of the economic and social developments of the last seventy years" was announced by the Prime Minister on August 14.

For this purpose the following are appointed Commissioners under Part 1 of the Inquiries Act:—

The Honourable Newton W. Rowell, LL.D., Chief Justice of Ontario, Chairman;

The Honourable Thibaudeau Rinfret, Justice of the Supreme Court of Canada;

John W. Dafoe, LL.D., Editor-in-chief of the Winnipeg *"Free Press";*

Robert Alexander MacKay, Ph.D., Professor of Government, Dalhousie University, Halifax, N.S.; and

Henry Forbes Angus, M.A., B.C.L., Professor of Economics, University of British Columbia, Vancouver, B.C.

In appointing this Commission, the Prime Minister also announced the terms of reference, which, "without limiting the general scope of the inquiry," were:—

(*a*) to examine the constitutional allocation of revenue sources and governmental burdens to the Dominion and provincial governments, the past results of such allocation and its suitability to present conditions and the conditions that are likely to prevail in the future;

(*b*) to investigate the character and amount of taxes collected from the people of Canada, to consider these in the light of legal and constitutional limitations, and of financial and economic conditions, and to determine whether taxation as at present allocated and imposed is as equitable and as efficient as can be devised;

(*c*) to examine public expenditures and public debts in general, in order to determine whether the present division of the burden of government is equitable, and conducive to efficient administration, and to determine the ability of the Dominion and provincial governments to discharge their governmental responsibilities within the framework of the present allocation of public functions and powers, or on the basis of some form of re-allocation thereof;

(*d*) to investigate Dominion subsidies and grants to provincial governments.

The Commissioners were instructed "to report upon the facts disclosed by their investigations; and to express what in their opinion, subject to the retention of the distribution of legislative powers essential to a proper carrying out of the federal system in harmony with national needs and the promotion of national unity, will best effect a balanced relationship between the financial powers and the obligations and functions of each governing body and conduce to a more efficient, independent and economical discharge of governmental responsibilities in Canada."

National Employment Commission commended

The interim report of the National Employment Commission, reviewed elsewhere in this issue, deals comprehensively with the situation in all its phases. In its survey, the commission not only broke down the relief problem into its component parts, particularly as regards employables and unemployables, but it also made a number of important recommendations which are detailed in the report.

The Prime Minister, Rt. Hon. W. L. Mackenzie King, in commenting on the Commission's report, considered that it should help direct public attention to the valuable services which the Commission has performed. Commending the report as meriting "the careful study of all who are concerned with the solution of the social and administrative questions concerning Canada at the present time." the Prime Minister emphasized that it reveals the nature and extent of the Commission's contribution in assisting the Dominion Government and provincial and municipal authorities to cope with the all-important problem of unemployment and relief. Concluding, the Prime Minister stated:—

"The National Employment Commission was established before the conclusion of the first session of the present Parliament, in order to assist the Government in effecting a nation-wide co-operative effort towards reducing the numbers of unemployed and ensuring the adequate care of those on relief. It will, I think, be agreed that the Report reflects great credit on the Chairman and Members of the Commission, and the Advisory Committees. In presiding over the activities of the Commission, Mr. Arthur B. Purvis has brought to his task exceptional qualities of judgment and energetic leadership."

Associating himself with the Prime Minister in registering appreciation of the services of the Commission, the Minister of Labour believed that "apart from the question of jurisdiction in implementing certain of the proposals, the conclusions reached by the Commission would be generally approved by public opinion throughout Canada." Dealing with the recommendations of the Commission, Honourable Mr. Rogers stated:—

"The majority of these recommendations have been accepted in whole or in part by the Dominion Government. As the National Employment Commission is an advisory body, governmental approval has been necessary before the recommendations could be translated into policies. Certain major recommendations have been held in abeyance, for instance, the proposal to bring the Employment Service under national administration, the proposal to revive or establish apprenticeship in the various provinces by Dominion legislation, and the proposal for low-rental housing.

"With respect to the first and second of these proposals the Government has not taken action because of the present uncertainty regarding the boundaries of Dominion and Provincial jurisdiction on the subject of industrial relations and social legislation. In the absence of constitutional amendments it was thought to be unwise for the Dominion Government either by subvention or by legislation to invade fields which the B.N.A. Act and judicial decisions had declared to belong to the provinces. This attitude was emphasized by the recent decision of the Privy Council on the social legislation of the 1935 session. The proposals for low-rental housing were received in the midst of the recent short session. In view of the fact that the provision of low-rental housing is primarily a municipal and provincial responsibility, the Dominion Government did not feel justified in proceeding with this recommendation without a further examination of municipal and provincial plans for low-rental housing and slum clearance. In taking this position it had in mind the support already given by Dominion legislation to employment in the building trades through the Dominion Housing Act and the Home Improvement Plan.

"In its recommendations on the relief problem the Commission has proposed that a separation should be made between assistance given to various classes of relief recipients, namely, unemployment aid, agricultural aid and relief and assistance to unemployables; also, that each group should receive aid appropriate to its special problems with improved administrative controls brought about by conditions attached to federal grants-in-aid. The Commission have also proposed that special measures should be taken to increase the employability of the unemployed group in order that those who are physically fit may be absorbed more readily into the labour market. The Government is in accord with these recommendations and its policies are being framed accordingly."

Statistics of public aid recipients

According to the August issue (No. 2) of *Information Service* published by the National Employment Commission, figures for July supplied by the Dominion Commissioner of Unemployment Relief, indicate a reduction of 13 per cent over the corresponding period a year ago in the estimated numbers receiving aid as reported in preliminary returns from the provinces. On this basis, the Dominion total for July of this year was 886,000 as compared with 1,013,000 in July 1936.

Registration returns of persons in receipt of aid to which the Dominion Government contributed, indicate that in April (the latest month for which complete information is available) there were 1,159,667 in receipt of assistance. Of this total 245,023 were classified as being employable, 55,956 were unemployable or of doubtful employability; 532,821 were listed as non-worker dependents while 325,867 were farm operators and dependents.

Labour legislation in Canada in 1936

The annual report of the Department of Labour on Labour Legislation in Canada, 1936, has just been published. The report is the eighth annual supplement to "Labour Legislation in Canada as existing December 31, 1928". As in former reports the supplement for 1936 contains the text or a summary of the various Dominion and Provincial labour laws enacted during the year together with certain Orders in Council and regulations made under statutory authority.

The legislation of 1936 includes a number of laws relating to wages, hours of labour, collective bargaining and unemployment relief and amendments to existing statutes dealing with other subjects of labour interest. The new report also contains the labour laws included in the Revised Statutes of British Columbia, 1936, which were proclaimed in force June 30, 1937.

The main volume of this series may be obtained from the Department of Labour for one dollar and the supplements for twenty-five cents each.

Labour Day Messages of Canadian labour leaders

Stressing the necessity and right of organization, the Labour Day messages of Canadian Labour leaders indicate the new objectives of Canadian Labour.

Mr. P. M. Draper, President of the Trades and Labour Congress of Canada, declared that since last Labour Day "the workers of Canada have been given a more direct recognition of their right to organize than at any previous periods—a recognition greatly to be welcomed at this time when a need of organization among wage earners is so urgent." As evidence of such recognition, he referred to the legislation recently enacted by the Legislatures of Nova Scotia, Alberta, Manitoba and Quebec, "conferring such a right by law" and added:

> "This legislation in the provinces named gives the workers a new charter. It is put up to the workers themselves to work out their own economic salvation in their own way, with a positive provincial constitutional support previously lacking. Workers in the other provinces should see to it that their Legislatures are no less aware of the pressing need for legislative recognition of the right to organize so that they too may have legal backing for their efforts to extend the scope of collective bargaining in industry."

Explaining the complementary relationship between free trade unionism and democracy, Mr. Draper said:

> "Trade unionism does not seek nor suffer arbitrary domination. It is the foe of the dictator for it tries to remove the very causes of discontent on which the dictator rides to power. The Labour Movement needs democracy to reach its ideals and in turn it is a bulwark of constitutional democracy. It does not seek class war but only an understanding with its partner in industry to ensure industrial peace founded upon social justice."

On the subject of organization Mr. A. R. Mosher, President of the All-Canadian Congress of Labour, expressed himself, in part, as follows:

> "One of the important lessons of the last depression is that the unorganized workers suffered more than the organized groups, and that in many cases they are still working for wages which were ruthlessly slashed when conditions were at their worst...
>
> "But the depression showed up more than the weakness of the unorganized workers; it was an unforgettable demonstration of the weakness of the economic system itself. And the workers are now realizing, along with a growing number of people in every walk of life, that Labour organization is an essential factor in bringing about the social and economic changes which are required if industry is to function on a stable basis and adequately provide the material requirement of civilization. . .
>
> "The workers welcome the legislation passed recently in certain provinces protecting the right to organize and bargain collectively; they regret only that such legislation is necessary. Opposition to labour organization and to the negotiation of agreements

covering wages and working conditions is becoming futile, and employers should be farsighted enough to realize that fact."

That "this Labour Day marks a change in the public attitude towards unionism" was the opinion expressed by Mr. W. T. Burford, Secretary-Treasurer of the Canadian Federation of Labour. In this respect Mr. Burford further observed:

"On a rising market, Canadian workers are demanding more for their labour, and most people admit the justice of their claim. Much though everyone regrets that interruptions of work should be incidental to the bargaining process, their prevalence is both a promise and a warning. They are an indication of returning prosperity and of the need for better manners in industrial relations. . .

"It is important that there should be no misunderstanding of the efforts of the workers to obtain for themselves a fair share of the wealth they produce. Fortunately, it is now more fully realized than in the past that in trying to raise their own standard of living the organized workers are contributing to the improvement of conditions for the whole community. . ."

In his Labour Day Message, Mr. A. Charpentier, the General President of the Confederation of Catholic Workers of Canada, Inc., after pointing out the expansion of the Catholic Labour Movement in Quebec, extended to the membership wishes of success for the Labour Day celebrations organized in the various sections of the Province, and expressed the hope that all found therein strength in their ideals together with courage and enthusiasm in their work for the welfare of the labour classes.

Health Insurance in Canada

"Health Insurance in Canada" is the title of an article reprinted in pamphlet form from the Review *Le Assicurazioni Sociale* of the Instituto Nazionale Fascista Della Previdenza Sociale, Rome.

The article, written by Dr. J. J. Heagerty of the Department of Pensions and National Health, reviews the jurisdictional positions of the Dominion and the Provinces in respect of public health as determined in the British North America Act; the historical background of public health activities in Canada leading up to the establishment of the Dominion Department of Health in 1919, and the activities of the Department; the existence in each of the provinces of a Department or Board of Health for the administration of all such public health measures as are exclusively provincial in character.

Dr. Heagerty also refers to the establishment of the Dominion Council of Health bringing together semi-annually the Provincial and Dominion health authorities along with others appointed to represent the various phases of Canada's social-economic life; and to the merging, in 1928, of the Department of Health with the Department of Soldiers' Civil Re-Establishment under the name of the Department of Pensions and National Health.

"It is obvious", Dr. Heagerty says, "from a contemplation of the respective jurisdiction of the Dominion and of the Provinces in regard to public health, that health insurance is primarily a provincial responsibility". He then refers to the early investigations into the subject of health insurance made by the Province of British Columbia when in 1920 a Royal Commission was appointed to investigate the subject; and again in 1928 a committee of the Legislative Assembly of that Province was appointed "to enquire into the workings of systems of health insurance and maternity benefits." In the same year a select standing Committee of the House of Commons in accordance with its directions made a report on insurance against unemployment, sickness and invalidity. (This report was reviewed in the Labour Gazette of June 1928, page 586).

In April 1929 a Royal Commission on State Health Insurance and Maternity Benefits was appointed by the British Columbia Legislature. (Labour Gazette, June 1929, page 609 and August 1929, page 847). Two reports were made by this Commission the last one in 1932 (Labour Gazette, March 1932, page 250 and May 1932, page 521). As a result of this report, a plan of a Bill of Health Insurance was drawn up for presentation to the legislature in 1934, but was withheld pending a further study.

In 1932 the Legislative Assembly of Alberta adopted a resolution appointing a Commission (Labour Gazette April 1932, page 412 and July 1932, page 742) to study and make recommendations as to "the best method of making adequate medical and health service available to all the people of Alberta." A Health Insurance Bill was introduced and passed at the 1935 Session of the Legislature. Dr. Heagerty then gives in detail the provisions of the Alberta Act which is to come into effect on proclamation. However, proclamation has not yet been made.

In March, 1936, the Legislature of the Province of British Columbia passed a Health Insurance Act (Labour Gazette, May, 1936, page 422). Dr. Heagerty's survey deals with the provisions of the British Columbia Act, details of which have been given, along with other information concerning activities in con-

nection with the Act, (see previous issues of the Labour Gazette June 1937, page 597; March 1937, page 263; May 1937, page 481; and February 1937, page 126).

Dr. Heagerty also refers briefly to the health insurance provisions in the Employment and Social Insurance Act (Labour Gazette, July 1935, page 617-20) passed by the Dominion Government; the submission of the Act to the Supreme Court of Canada where it was found to be unconstitutional. This ruling was appealed to the Privy Council of Great Britain, the decision of the Supreme Court being upheld by the Privy Council (Labour Gazette February, 1937, pages 236 and 245-247).

Using census statistics of 1931, Dr. Heagerty concluded his review by estimating the cost of illness per capita per annum at $23.00 emphasizing however that complete data was not available to permit of an accurate estimate being made of what would be the annual cost per capita of health insurance for the whole country.

Canada Year Book, 1937

The 1937 edition of the Canada Year Book has been issued recently by the Dominion Bureau of Statistics. The new edition has been thoroughly revised throughout and includes in all its chapters the latest information available up to the date of going to press.

The Canada Year Book, the official statistical annual of the Dominion contains an up-to-date account of the natural resources of the country and their development, the history of the country, its institutions, demography, the different branches of production, trade, transportation, finance, education, etc.

In a preface to the 1937 edition, Dr. R. H. Coats, Dominion Statistician, refers to the growth in the administrative functions of government and the consequent increase in the content and variety of the statistical data made available. In an effort to keep the Year Book within convenient limits the policy has been adopted of replacing material which is unchanged from year to year by adequate references to earlier editions, while every care is taken to keep the framework intact and well balanced.

The results of the Quinquennial Census of 1936 in the Prairie Provinces are given in a special chapter; while a section dealing with "Occupations of the Canadian People" based on data taken from statistics collected in the 1931 Census, is of particular interest.

The Bank of Canada having now been established in the financial system of the country, the usual chapter on Currency and Banking has been recast, a special section entitled "The Bank of Canada and Its Relationship to the Canadian Financial System" being included in the chapter.

As in former editions of the Canada Year Book there is included a chapter on "Labour and Wages," which is divided into two parts each containing several sections. Chief among the sections of Part I are those dealing with occupations of the Wage-earning population; the Dominion Department of Labour; Provincial Labour Departments and Bureaus; Canada and the International Labour Organization; Organized Labour in Canada; Fatal Industrial Accidents; Workmen's Compensation in Canada; Strikes and Lockouts; Employment and Unemployment; Pensions for the Aged and the Blind; the Co-operative Movement in Canada; Labour Legislation in Canada in 1936; Legislation respecting Combinations in Restraint of Trade; and Mothers Allowances. Part II of the chapter is entitled "Wages and the Cost of Living" and has sections dealing with Wage Rates; Wages and Hours of Labour under Provincial Minimum Wage Legislation; and Cost of Living of Wage-Earners.

Anyone wishing to obtain a copy of the Canada Year Book may do so by adressing their request to the King's Printer, Ottawa. The price is $1.50 which merely covers the cost of paper, printing and binding.

Profit-sharing co-partnership in Great Britain

The British *"Ministry of Labour Gazette"* for August contains an article dealing with the position of profit-sharing and co-partnerships in Great Britain and Northern Ireland during 1936.

According to enquiries made by the Ministry of Labour the total number of profit-sharing and co-partnership schemes in operation at the end of 1936 was 418, six firms included in this total each having two schemes in operation. This total represents a slight decrease over the 426 undertakings functioning at the end of 1935. About 413,000 workpeople were employed in the 412 businesses concerned, of whom 260,000 were entitled to participate in the benefits of the schemes.

Bonuses were paid during the year under 363 schemes averaging £11 6s. 2d. per head or an average percentage in addition to earnings of 6·1 per cent.

Statistics presented for a ten-year period show that the number of schemes in operation increased from 516 at the end of 1927 to 521 at the end of 1929, but there has been a continuous decline since the latter year leaving the number of schemes in operation considerably less at the end of 1936 than in 1927.

These figures include schemes in co-operative societies as well as those in other businesses.

However, the article from which these were obtained also gives detailed particulars for schemes other than those in co-operative societies as well as schemes in co-operative societies.

Collective bargaining in the Netherlands and Czechoslovakia

In Canada public attention has been recently focused on the subject of collective bargaining between employers and employees, and it is, therefore, of interest to note what is being done in this regard in other countries.

A recent issue of "Industrial and Labour Information" published by the I.L.O. summarizes the operation of collective bargaining in the Netherlands and Czechoslovakia.

In the Netherlands in 1927, the legislative authorities of that country made the provisions of collective agreements binding upon the contracting organizations and their members, and an Act passed in May of this year provides for the possibility of making such collective agreements generally binding for all concerned.

Under this new Act, the Minister of Social Affairs of the Netherlands may extend to third parties any collective agreement which is valid throughout the whole country or a part of the country for the large majority of persons employed in a given industry. This means that all labour contracts—signed by the employers and workers concerned before or after—the adoption of such a decision are regulated by the collective agreement. The Act excludes certain provisions of collective agreements which cannot be declared binding, such as clauses tending to compel an employer or worker to affiliate with a trade organization, or discriminating between union and non-union workers, or referring to the regulation of prices and market conditions. All agreements between employers and workers which are contrary to provisions made binding are voided by the Act and are to be replaced by binding provisions. The Act also establishes a procedure to be followed in the drawing up of collective agreements. Damages may be claimed by trade organizations of employers and workers which are parties to the collective agreement from persons who fail to observe provisions declared to be generally binding for any loss which they or their members suffer from want of such observance.

The Act also authorizes the Minister of Social Affairs to declare unoperative any clause of a collective agreement when the public interest so requires.

In June of this year, under the Plenary Powers Act of 1934, the Czechoslovak Government promulgated a Legislative Decree making it possible to render binding any collective agreements already in operation. This Decree is the first legislative measure of a general character issued in Czechoslovakia in connection with collective agreements, such agreements having formerly been regulated only in certain branches of industry.

According to the decree, a collective labour agreement is deemed to mean the regulation of conditions of employment and wages between one or several employers or one or several employers' trade associations on the one side, and one or several workers' organizations on the other, whether the collective agreement is the outcome of an understanding between the parties concerned or of a compromise or whether it results from an award issued by one of the institutions responsible under existing legislation for the collective settlement of wage questions arising between the workers and their employers.

The Ministry of Social Welfare, in agreement with the Ministry concerned, may declare a collective agreement to be binding for all undertakings in a given district and trade. As a result of such a decision, the provisions of the collective agreement made binding apply to all undertakings in the given district and trade, even when the employer or the worker or both are not members of the organizations which concluded the agreement.

The decree also provides for the method of procedure in drawing up a collective agreement, its effects on individual contracts, supervision and penalties. The decree which came into effect on June 30, will lapse on December 31, 1938, with exception of the provisions relating to the intangibility of workers' rights guaranteed by collective agreements.

Convention of Trades and Labour Congress

The fifty-third annual convention of the Trades and Labour Congress of Canada is being held in Ottawa as this issue of the LABOUR GAZETTE goes to press. A detailed review of the convention, including the various addresses, reports presented, and the resolutions adopted will appear in the next issue of this publication.

Place of unionism in national life

Declaring that trade unions in Canada were one of the most important factors in the economic and social life of the country, the Hon. Norman McL. Rogers, Minister of Labour, in his Labour Day message at the Canadian National Exhibition, emphasized the necessity for a better public understanding of the constructive side of trade unionism.

"It was a mistake to assume that unions were irresponsible and wanted strikes," he asserted, in crediting Canadian unions as being "willing

to accept their share of responsibility for industrial peace."

Dispelling certain tendencies to criticize unions because they were militant or dissatisfied with conditions, the Minister of Labour observed:

"It is well for us to remember that the movement has grown to its present proportions over the rough roads of human adversity.

"Functioning as they do, within a competitive system, dealing with employers over wages and conditions, there is bound to be some conflict which invariably is featured prominently in newspapers.

"War is news; peace is not. Strikes are news; peaceful settlements are not. Peace hasn't the colour and fire of war and strife. Perhaps not deliberately, but during the recent disturbances it has been suggested that unions are perpetual sources of disorder and misunderstanding.

"I do not believe that to be a correct impression," declared the Minister. "For every single dispute during the past year which resulted in a strike at least a dozen have been settled peacefully and satisfactorily."

Function of Trades and Labour Councils

In a felicitous message to to the Allied Trades and Labour Association of Ottawa on the occasion of its fortieth anniversary, the Minister of Labour, Hon. Norman McL. Rogers, emphasized the important function of trades and labour councils in the labour movement. Commending the interest of such labour bodies in public affairs, the Minister declared:

"The democratic form of government above all others is one which requires for its proper exercise the fullest and freest discussion by all elements of the population. No one can overestimate the value of informed public opinion as an aid to self-government, both as respects the formulation and adoption of policies and in their execution. Public policies must never come to be regarded as above criticism.

"Therefore, as Minister of Labour, I desire to express the hope that the particular feature of labour organization work which finds expression in the existence of city and district Trades and Labour Councils will be continued and further developed in the years to come. Only through these and other educational influences and the creation thereby of enlightened judgment on public matters, can democracy prevail against potential systems operating on an entirely different basis in various parts of the world to-day."

Pensions for the Blind

Regulations governing the payment of pensions to the blind have been published in the *Canada Gazette* of August 28.

Provision for pensions to blind persons was made under legislation (Labour Gazette, May, 1937, page 503) enacted at the last session af Parliament, the Old Age Pensions Act being amended to include as pensioners blind persons over 40 years of age who will receive pensions of $20 a month. Under agreements to be negotiated, it was provided that the Dominion would contribute 75 per cent of the cost of such pensions, the provinces assuming the remainder. Because of the greater handicaps of blind persons, the amount a blind pensioner may earn without having his pension reduced is $200 a year, if single, and $400 if married. Sighted pensioners are permitted only $125 a year exempt earnings whether married or single.

Following the gazetting of the regulations, the Minister of Finance, Honourable C. A. Dunning, announced that Ontario had taken advantage of the amendment to the Old Age Pensions Act, an agreement having been completed with the Provincial Government. It is understood that agreements with other provinces have been reached in principal and only the completion of regulations for administration remains.

British medical authority on conveyor system in industry

The annual report of the Chief Inspector of factories in Great Britain (reviewed elsewhere in this issue) contains a chapter relating to industrial health in which the senior medical inspector gives his views on the conveyor system in industry in regard to its effect on the workers. His observations are as follows:

"In my report for last year I referred briefly to the conveyor system in industry, a process which lends itself very readily to speeding up. Further inquiry has not shown any definite evidence of adverse effects on health. Essentially, speeding up is not a new factor in industry but has existed to a greater or lesser extent ever since the introduction of machinery; a fact sometimes forgotten. Moreover it exists outside industry to the same if not greater extent, and consequently the effect of speeding up in industry itself is by no means easy to estimate. Speeding up is now closely related to mass production, a method of manufacture whereby the individual worker carries out one particular

and limited manual operation continuously, the article being automatically conveyed to another worker to perform some further operation. Various systems of this kind of work are in vogue. The length of time each operation takes is estimated and the machine set at such a speed as to allow the individual worker the estimated time. It now operates in a vast number of industries, in fact, in any industry in which there is mass production or semi-mass production, e.g., the manufacture of motor cars and the manufacture of wearing apparel.

"Obviously the less time that is allotted to each item of work the greater is the production, with the result that there must always be a tendency to speed up the mechanical part of the operation. Advocates of particular systems vie with one another in reducing the time limit to a minimum, but it has to be remembered that it is not economical to speed up beyond a certain limit, i.e., the capacity of the worker to complete satisfactorily his operation. The effect on individual workers depends to a very large extent on the individual's make-up, physical and mental his day to day health, circumstances inside (output and wages) and outside the factory, and any other factor affecting his well-being. . .

"It is my view that work of this character, that is to say, work which is subject to time limits, is much more likely to produce, in the first instance, at any rate, mental conditions such as over-anxiety, rather than physical injury, though, of course, the former inevitably leads to the latter."

Operation of unemployment insurance in Wisconsin

Under the Wisconsin unemployment insurance law enacted in 1932 (LABOUR GAZETTE March 1932, page 323 and April, 1932, page 379) insurance benefits have been in operation in that State for one year. During that period benefit cheques totalling $1,080,000 have been paid to 52,000 Wisconsin workers—approximately 4 per cent of the total contributions of employers.

The State of Wisconsin pioneered in this form of social legislation on this continent, although several States will commence next year to pay benefits under the federal social security program.

Employers in Wisconsin (the employees are not obliged to contribute) began building individual unemployment insurance accounts under a compulsory 2 per cent payroll tax on July 1, 1934. As explained by the administrator of the Wisconsin law, Mr. Paul A Raushenbush, in a recent press statement: the incentive for employers to stabilize production and employment is provided in the rate of contribution. All employers will pay 2 per cent of payrolls until January 1, 1938, but thereafter rates vary from zero to 4 per cent, depending upon the individual employer's capacity to maintain his reserve by stabilizing employment.

The administrator further explained that "although 4,300 employer accounts now are potentially liable for benefits fewer than 2,600 of these reserve accounts have paid benefits to date." He said that about 1,700 employers, or about 40 per cent, apparently have given their employees sufficiently steady work so that they have had no benefits to pay.

Proclamation of Nova Scotia Apprenticeship Act

In the August issue of the LABOUR GAZETTE, page 861, the terms of the Apprenticeship Act of Nova Scotia were reviewed. It was provided that the Act would come into effect on proclamation.

The Nova Scotia "Royal Gazette" of August 25, contains the notice of proclamation which states that the Act "shall come into force on, from, and after the 1st day of September."

Alberta Tradesmen's Qualification Act

New regulations under the Alberta Tradesmen's Qualification Act, 1936, amend the regulations made in July, 1936, (LABOUR GAZETTE, August, 1936, page 704) applying to certain classes of mechanics, viz., those employed in the repair and construction of internal combustion engines, automobile engines and refrigerators, and in electric and acetylene gas welding, electricians, plumbers, gas and steam fitters, radiotechnicians and, also, to barbers. The fees for an apprentice's certificate and for the renewal of a temporary certificate are reduced from $2 to $1. Changes are made, too, in the clause allowing a time credit to an applicant who has not had the required practical experience but who holds a certificate from a school approved by the Department in the subjects pertaining to his trade. The time credit allowed under the earlier regulations has been extended to a maximum of two years' practical work except for barbers and radiotechnicians whose school certificates entitled them only to one year's credit.

According to a bulletin entitled "The Hardwood Flooring Industry in Canada, 1936" published recently by the Dominion Bureau of Statistics, the average number of employees in the hardwood flooring industry in 1936 increased from 737 in 1935, to 751 in 1936, and the total sum paid in salaries and wages was $682,457, as compared with $603,834 in 1935.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

REPORTS were received in the Department of Labour recently from Boards of Conciliation and Investigation established under the provisions of the Industrial Disputes Investigation Act to deal with disputes affecting:—

(1) Canadian Collieries (Dunsmuir), Limited, and Western Fuel Corporation, Limited, and their employees being members of the United Mine Workers of America;

(2) The Public Utilities Commission of the City of Port Arthur and the Corporation of the City of Fort William and their employees being members of Division No. 966, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America;

(3) The Public Utilities Commission of the City of Port Arthur and the Corporation of the City of Fort William and their electrical workers and telephone employees, respectively, being members of the International Brotherhood of Electrical Workers. The texts of these reports accompany this article.

Applications Received

An application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour on September 3 from employees in the Telephone Department and Electric Light and Power Department of the Corporation of the City of Edmonton. The employees, approximately 100 in number, members of the Canadian Electrical Trades Union, request restoration of the 1929 wage rates, institution of a forty-hour working week, three weeks' sick leave with pay in each year, and three weeks' holidays with pay in each year. They also request that the foregoing terms and conditions be incorporated in an agreement between the City of Edmonton and the employees. The matter of the application had been taken up with the civic authorities at the time of going to press.

Board Established

A Board of Conciliation and Investigation was established on September 3 to deal with a wages dispute between the Corporation of the City of Winnipeg and certain of its employees, 180 in number, being members of the Winnipeg, Pointe du Bois and Slave Falls Units of the Union of Hydro Electrical Workers (Labour Gazette, May, 1937, page 483). Members of the Board have been appointed as follows: on the nomination of the civic authorities, Mr. Travers Sweatman, K.C., of Winnipeg, Manitoba; and on the employees' nomination, Mr. Fred Bancroft, of Oakville, Ontario. Messrs. Sweatman and Bancroft will confer looking to a joint recommendation for the third member, who will be chairman of the Board.

Commissioner Appointed

On September 8 His Honour Albert Constantineau, Judge of the County Court for the Counties of Prescott and Russell, in the Province of Ontario, was appointed a Commissioner under the provisions of Part I of the Inquiries Act, Chapter 99, R.S.C., 1927, to inquire into an industrial dispute involving the management of the Quebec Central Railway Company and its train service employees being members of the Order of Railway Conductors and Brotherhood of Railroad Trainmen. This appointment was made on the recommendation of the Minister of Labour in accordance with Section 65 of the Industrial Disputes Investigation Act.

Previous working agreements had been negotiated by a committee representing both the railway conductors and the trainmen. When this committee requested a revision of the existing agreement it was advised that a newly constituted committee of employees had requested an agreement applicable to conductors alone. The old committee objected to the company recognizing the new committee of employees and conceding to it the right to negotiate a separate agreement. The management contended that the differences between the two groups of employees must be settled before it could take part in negotiations respecting a new agreement.

The Honourable Mr. Rogers, Minister of Labour, and officers of his Department, endeavoured for many months to settle this controversy, but without success. Recently the dispute became definitely acute, to the detriment of the public interest and the good operation of the service, and serious friction developed between the parties concerned.

Owing to the nature of the dispute, the case did not appear to be one for reference to a Board of Conciliation and Investigation; hence the appointment of a Commissioner.

Settlement Effected

As a result of departmental mediation, an agreement respecting wages and working conditions, effective September 1, 1937, was reached recently between officials of the Cana-

dian Pacific Railway Company and representatives of the clerks, checkers, elevator operators and freight handlers in the employ of the company at Digby, Nova Scotia. The establishment of a Conciliation Board, for which the employees had applied during July (LABOUR GAZETTE, August, 1937, page 839), thus becomes unnecessary. Forty-six employees, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, were affected by the dispute.

Interim Report of Board in Dispute Between Canadian Collieries (Dunsmuir), Limited, and Western Fuel Corporation, Limited, and Their Employees

A unanimous interim report was received in the Department of Labour on September 3 from the Board of Conciliation and Investigation established at the close of July to deal with a dispute between certain mine operators in the coal-producing section of Vancouver Island and their miners, members of the United Mine Workers of America (LABOUR GAZETTE, August, 1937, page 839). Approximately 800 employees of the Canadian Collieries (Dunsmuir), Limited, and 1,000 employees of the Western Fuel Corporation, Limited, are directly affected by the dispute, which grew out of the men's request for union recognition, increased wages and certain alterations in existing conditions of work.

The interim report announces a provisional decision which has been accepted by the employers and employees as a basis of future negotiations. The Board will stand adjourned to allow a committee, set up by the management and the United Mine Workers of America, to evolve a system of contract labour on terms satisfactory to both sides.

The Board is composed of Mr. Leonard W. Brockington, K.C., of Winnipeg, Manitoba, chairman, appointed on the joint recommendation of the other Board members, Mr. George Kidd, of Vancouver, B.C., nominated by the companies, and Mr. Angus J. Morrison, of Calgary, Alberta, nominated by the employees.

Text of Interim Report

In the matter of "The Industrial Disputes Investigation Act" and a certain Board of Conciliation and Investigation appointed pursuant to the said Act to consider a dispute between the owners and employees of Canadian Collieries (Dunsmuir), Limited, at Nanaimo and Cumberland, B.C., and Western Fuel Company, Limited, at Nanaimo, B.C.

The Board of Conciliation and Investigation duly appointed to consider the above-mentioned dispute began its sittings at Nanaimo on Tuesday, the 17th day of August. After a brief public session, the Board, in the belief that its main purpose was conciliation and in the desire that the parties themselves should exhaust all possibilities of mutual agreement before the Board itself engaged in what must necessarily have been an extensive and detailed public and private enquiry, made arrangements acceptable to both parties for a series of meetings between delegates of the men as represented by the United Mine Workers of America (District 18) and the General Manager and Officials of the companies concerned. At these meetings the members of the Board were present to direct the deliberations and to contribute what they could to the discussions. The members of the Board unanimously desire to express their deep appreciation of the good-will, the forbearance and the very real desire to appreciate each other's problems which characterized the sundry representative meetings. All delegates present shared with members of the Board the consciousness of the calamity that would fall upon employees, company, locality and province, in case of a cessation of labour in the mines concerned. It is the desire of the members of the Board and not least of the member of the Board appointed by the men themselves to pay public tribute to Colonel Villiers, general manager, of the companies, for the humanity and the continuous desire to provide as much work as possible for the companies' employees, which have been such commendable features of his distinguished management.

The Board feels that the needs of the case will be best served by an interim report and is happy to announce that the provisional decision (of which the terms are outlined below), which represents the unanimous opinion of the Board itself has been accepted by employers and employees as the basis of future negotiations and in partial substitution for and accretion to any agreement or working conditions that prevail at the present time:—

(1) The companies recognize completely and fully the right of collective bargaining and accept the United Mine Workers of America as the bargaining authority on behalf of all their employees entitled to membership in the Union.

(2) The companies accept the principle of the closed shop.

(3) The companies will give and continue to give preference in all new work to present or former employees of the companies.

(4) At the present time it is conceded that the divisions and subdivisions of labour and wages in this field are complicated and difficult.

The Board believes that it is essential for the interest and protection of both operators and employees to evolve a system of contract labour on terms satisfactory to both sides. Such a system in our opinion cannot be reduced to concrete proposals without an exhaustive and scientific enquiry by competent and experienced men of good will. We believe that a committee set up by the management and by the United Mine Workers can best achieve this end. It is therefore our unanimous opinion that such a conference should be instituted when convenient and continue to sit until all the details of the situation have been carefully examined. To the attention of such a conference of employers and employees the Board would draw the following principles:—

(*a*) The rising and increased costs of living and production,

(*b*) The financial position of the companies and the difficulties of the competitive and technical conditions which surround their operations.

(*c*) The exploration of the possibilities of increase in revenue, and

(*d*) All the factors which affect the legitimate aspirations of labour and the desirability of continuance and enlargement of the enterprise, on terms fair to invested capital.

(5) The Board will stand adjourned to allow of the scientific examination by the parties themselves of the facts, factors, and conditions outlined above. It will, however, resume at the request of either party if it can contribute to the solution of any difficulty.

In conclusion the Board wishes to congratulate all parties on the courtesy, the fair play and the understanding which have added both pleasure and profit to the deliberations of us all. We would also like to express our firm belief that the relationship between the companies and the United Mine Workers of America will mean an accession of strength and prosperity to capital and labour alike.

Accepted and approved.

(Sgd.) George Kidd,
(Sgd.) A. J. Morrison,
(Sgd.) Leonard W. Brockington.

For the companies:

(Sgd.) Charles W. Villiers.

August 20, 1937.

For the United Mine Workers of America:

(Sgd.) Patrick Conroy.

Report of Board in Dispute Between the Corporation of the City of Fort William and the Public Utilities Commission of the City of Port Arthur and Their Street Railway Employees

A unanimous report was received by the Minister of Labour on September 7 from the Board of Conciliation and Investigation established in July to deal with a dispute respecting wages and working conditions between the Corporation of the City of Fort William and the Public Utilities Commission of the City of Port Arthur, on the one hand, and 73 street railway employees, on the other hand, being members of Division 966, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America (Labour Gazette, August, 1937, page 839). The personnel of the Board was as follows: Mr. Robert Jacob, K.C., of Winnipeg, Manitoba, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. Arthur H. Dowler, K.C., of Fort William, Ontario, nominated by the employers; and Mr. Samuel Ashton, of Port Arthur, Ontario, nominated by the employees.

Text of Report

The Industrial Disputes Investigation Act
and

In the matter of a Dispute between the Public Utilities Commission of the City of Port Arthur and the Corporation of the City of Fort William, on the one hand, and certain of their employees, on the other hand, being members of Division No. 966, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America.

To the Honourable
Mr. Norman McLeod Rogers,
Minister of Labour,
Ottawa, Canada.

The Board of Conciliation and Investigation appointed by you under the provisions of the Industrial Disputes Investigation Act, Revised Statutes of Canada, Chapter 112, and amendments thereto, to inquire into the dispute between the Public Utilities Commission of the City of Port Arthur and the Corporation of the City of Fort William, on the one hand, and certain of their employees, on the other hand, being members of Division No. 966, Amalgamated Association of Street and Electric Railway and Motor Coach Employees of America, arising out of a refusal of the employers to grant a request for an increase in the wage rates to conform with the value of wages earned in 1932, also several questions pertaining to working conditions, begs leave to report as follows:—

The location of the parties involved in the dispute is at the Cities of Port Arthur and Fort William in the Province of Ontario.

The members of the Board assembled at Fort William on the morning of August 9, 1937, and proceeded, after taking their oaths of office, to familiarize themselves from the documents received from the Registrar under the Act with the nature of the dispute, and to arrange the methods to be adopted in having each of the parties concerned present their case to the Board.

On the following day, August 10th, after due nctice to all parties concerned, representatives of all the parties appeared before the Board. Those appearing on behalf of the City of Fort William were Dr. B. C. Hardiman, Mayor of the City, J. O. Booth, Chairman of the Public Utilities of the City, and Charles J. Moors, Manager of the Public Utilities of the City. For the City of Port Arthur: Mr. P. V. Ibbetson, Chairman, and R. B. Chandler, Manager of the Public Utilities Commission of that City. For the Employees: Magnus Sinclair, International Executive Officer of the Amalgamated Association of Street and Electric Railway Employees of America.

In addition, representations were made to the Board by Mr. John King, and Mr. E. S. Rutledge, prominent citizens of Fort William, in opposition to the demands being made by the employees.

Three local officers of the Union of Port Arthur and Fort William were present as witnesses.

Meetings of the Board were held at Fort William on each of the following days, namely, August 9th, 10th, 11th, 12th, 13th, 25th, 26th, 27th, and 28th.

All parties to the dispute exhibited a spirit of harmony and goodwill at all meetings, and at the conclusion of the hearing the Board suggested that it should retire and permit the different parties to have a round table conference amongst themselves in an effort to settle and dispose of a number of the matters that were in dispute. This suggestion was readily assented to, and carried out, with the result that requests Nos. 3 to 9, both inclusive, as set out in the application for a Board, were amicably disposed of, leaving only requests 1 and 2 to be dealt with by the Board.

Obviously these two requests were the principal matters in dispute, and were set out in the application as follows:—

(1) "Re-adjustment of Clauses 12, 21 and 25 (of the present agreement) in order to increase wage rates to compensate in full for reduction of working hours from a ten hour to an eight hour day, and reduction of hourly rates. Said reduction having been made in 1933.
(2) One week annual vacation, with pay, for all employees covered by the agreement."

Forty-one exhibits were filed with the Board, giving information covering different phases of the matters in dispute, and dealing particularly with the above two requests.

Hereafter the word "Commission" refers to and means the Public Utilities Commission of the City of Port Arthur, and the word "Corporation" refers to and means the City of Fort William.

It seems the following facts are not in dispute:—

In the year 1932, owing to the loss of revenue resulting from the depression, a reduction was made by both the Corporation and Commission in the wages of all employees connected with the Street Railway Utility. In the agreements of that year between the Corporation and the Commission and the employees, and in the agreements for the years subsequent, down to 1936, the schedule of wages remained the same as they were previous to the reduction in 1932, but a supplementary agreement was attached to each said agreement which in effect provided that notwithstanding the rates of pay set forth in Clauses 12, 21 and 25 of the attached agreements the actual rates to be paid during the 12 months next ensuing were as established from time to time by the supplementary agreements.

A statement of the changes requested by the employees to be incorporated in the 1937 agreement were set out in a letter dated March 10th, 1937, addressed to the Commission, and your Board has reason to believe a similar letter went forward to the Corporation. The changes requested were the same as those set out in the form of application for a Board. The matter was considered at meetings of the Commission on April 13th and 26th, the result of which was that the employees were advised that the Commission was not favourable to changing existing wage rates. The Corporation took the same attitude. On May 4th the employees requested a meeting with the Commission to further discuss the matter, and this was arranged on Thursday, May 27th. The Commission again reviewed the matter, and the following resolution was passed affecting all Commission employees:—

> "That all cuts affecting employees earning $100.00 per month or less be restored in full, and that 50 per cent be restored of the reduction made in 1932 affecting those employees earning more than $100.00 per month, effective May 1st, 1937."

The employees were duly advised of the terms of the above resolution on May 28th, and on June 3rd a reply was received by the Commission in effect that their offer was not acceptable, stating that unless their request was complied with by Saturday noon, June 5th, 1937, steps would be taken towards the establishment of a Board of Conciliation under the Industrial Disputes Investigation Act, 1927, R.S.C. Chapter 112.

The Corporation did not make any offer such as that contained in the above resolution.

The employees urged in their presentation that the 10 per cent cut made in 1932 was only intended to be a temporary measure, and that having been in force for five years, and on the grounds that the economic depression which was the cause of the reduction was rapidly disappearing, they should be entitled to full restoration of the deductions made.

The representatives of the Corporation and Commission just as strongly urged that the

Utility was showing (*a*) in Fort William, an operating deficit, plus all capital charges; (*b*) in Port Arthur, an operating profit but a deficit when capital charges were taken into account. The Corporation further urged that if any increase in wages was made at this time the money would have to be raised by taxation; that taxes were so high already that large blocks of property were coming into the possession of the City through tax sales; that any increase in taxes would still further augment this unhealthy situation; that it would be difficult for the City of Fort William to provide money for additional wages now as no provision had been made in the estimates for 1937, and already great difficulty was being experienced in providing sufficient money to furnish many services that must be supplied by the Corporation.

Following a careful study of all the evidence submitted, the Board is of the opinion that the 10 per cent cut in wages, put into effect in 1932, was intended to be only for a temporary period, and should be restored as soon as possible. Ability to pay must always be a factor in the consideration of wage rates, and if the present application was considered on that basis alone no justification could be found for any increase at this time, except it be for the purpose of hastening the Utility into bankruptcy. The Board is not prepared to accept the principle that a surplus necessarily means an increase in wages, or that a deficit necessarily means a reduction in wages. So, notwithstanding that the Utility shows substantial yearly deficits as it is necessary to continue the operation thereof to provide transportation services in the two Cities, the men who operate the Utility should receive a fair and reasonable wage for their services. One of the employers, the Commission, saw fit to make the offer herein set out, establishing what, in its opinion, was a fair and reasonable wage, and the Board feel bound to accept it as such.

The Board is of the opinion that the offer made by the Commission to its employees was a reasonable offer and should have been accepted. The Board is also of the opinion that whatever increases are made to the employees in Port Arthur should also be made to the employes in Fort William. This notwithstanding that the Corporation made no such offer, and notwithstanding its apparent financial difficulties. The Board feels that it would be unjust and inequitable if a restoration were made in Port Arthur and not in Fort William. The employees are all members of the same union, operating a joint service between the two cities, performing the same services for the Corporation and the Commission, working under similar agrements with the Corporation and Commission, and living conditions are similar in both cities. The Board therefore makes its unaimous recommendations as follows:—

(1) That full restoration of the wage cut made in 1932 be made to employees receiving less than $100 per month; to employees, save and except operators, receiving more than $100 per month, a restoration of 50 per cent of the wage cut be made, and that the wages to be paid operators of more than one year's standing be sixty (.60c.) cents per hour. All these rates to be in effect from May 1, 1937.

(2) The Board have carefully considered the application for adjustment and compensation by reason of reduction of working hours as set out in request No. 1. This reduction was mutually agreed upon by both employer and employee five years ago, and your Board is of the opinion that it is not a matter that should be dealt with by it at this late date.

(3) The Board gave careful and serious consideration to the employees' request for one week's holiday, with pay. The Board, as a matter of principle, is favourable to such requests, yet, in this instance, are not disposed to so recommend.

All of which is respectfully submitted.

Dated at Fort William this 28th day of August, A.D. 1937.

Report of Board in Dispute Between the Corporation of the City of Fort William and the Public Utilities Commission of the City of Port Arthur and Their Telephone Employees and Electrical Workers, Respectively.

A unanimous report was also submitted to the Minister of Labour on September 7 in regard to wages dispute between (1) the Corporation of the City of Fort William and fifteen telephone employes, being members of the International Brotherhood of Electrical Workers, and (2) the Public Utilities Commission of the City of Port Arthur and thirty-six electrical workers, members of the same organization. These two disputes had been the subject of applications under the provisions of the Industrial Disputes Investigation Act during June (Labour Gazette, July, 1937, page 719), and were referred to the Con-

ciliation Board constituted during July under the said Act in respect of a dispute between the employers above named and their street railway employees (see preceding case). In dealing with these two cases, however, the member of the Board nominated by the street railway employees, Mr. Samuel Ashton, was replaced by Mr. Alexander Gibson, of Port Arthur, on the recommendation of the telephone employees and electrical workers concerned, members of the International Brotherhood of Electrical Workers.

Text of Report

The Industrial Disputes Investigation Act
and

In the matter of a Dispute between the Corporation of the City of Fort William and its telephone employees, members of the International Brotherhood of Electrical Workers, and

In the matter of a Dispute between the Public Utilities Commission of the City of Port Arthur and its employees, being electrical workers, members of the International Brotherhood of Electrical Workers.

To the Honourable
Mr. Norman McLeod Rogers,
Minister of Labour,
Ottawa, Ontario.

The Board of Conciliation and Investigation appointed by you under the provisions of the Industrial Disputes Investigation Act, Revised Statutes of Canada, 1927, Chapter 112, and amendments thereto, to inquire into a dispute between the Corporation of the City of Fort William and its telephone employees, members of the International Brotherhood of Electrical Workers, and also to inquire into a dispute between the Public Utilities Commission of the City of Port Arthur and its employees, being electrical workers, members of the International Brotherhood of Electrical Workers, arising out of a refusal of the employers, the Corporation of the City of Fort William, and the Public Utilities Commission of the City of Port Arthur respectively, to grant a restoration of wage cuts made in the year 1932 to their employees, members of the International Brotherhood of Electrical Workers, begs leave to report as follows:—

The location of the parties involved in the dispute is at the Cities of Port Arthur and Fort William, in the Province of Ontario, and the dispute in Fort William only affects the telephone employees of the Corporation, but in Port Arthur affects, in addition to the telephone employees, employees of the light and power Department of the Public Utilities Commission of the City of Port Arthur.

The members of the Board assembled at Fort William on the afternoon of August 24, 1937, and proceeded, after taking their oaths of office, to familiarize themselves, from the documents received from the Registrar under the Act, with the nature of the dispute, and to arrange the method to be adopted in having each of the parties concerned present their case to the Board.

On August 25th, after due notice to all parties concerned, representatives of all the parties appeared before the Board. Dr. B. C. Hardiman, Mayor, J. O. Booth, Chairman, and Charles J. Moors, Manager, of the Public Utilities Committee, appeared on behalf of the City of Fort William. P. V. Ibbetson, Chairman, and R. B. Chandler, Manager, appeared on behalf of the Public Utilities Commission of the City of Port Arthur. Ernest Ingles, International Vice-President of the International Brotherhood of Electrical Workers, appeared on behalf of the employees. Three local officers of the employees were present as witnesses.

Meetings of the Board were held at Fort William on each of the following days, namely: August 24th, 25th, 26th, 27th, 28th, 30th, and 31st.

The matters in dispute as set out in the applications for a Board are a demand for restoration of wage cuts made by the employers, the Corporation of the City of Fort William, and the Public Utilities Commission of the City of Port Arthur, in the year 1932, and while the dispute, so far as the Public Utilities Commission of the City of Port Arthur and its employees is concerned, involves employees of its light and power Department in addition to employees of its telephone Department, and the dispute in the City of Fort William only involves employees of its telephone Department, all parties agreed that the hearing of the two applications should be concurrent, and that the Board should make only one report.

All parties to the dispute exhibited a spirit of harmony and goodwill at all meetings. At the conclusion of the hearing the Board suggested that it should retire and permit the parties to discuss the matter themselves in an effort to settle and dispose of the dispute. This suggestion was readily assented to, but proved abortive.

Twenty-two exhibits were filed with the Board, giving information covering different phases of the matter in dispute.

Hereafter the word "Commission" refers to and means the Public Utilities Commission of the City of Port Arthur, and the word "Corporation" refers to and means the City of Fort William.

The following facts are not in dispute:—

In the year 1932, owing to loss of revenue resulting from the depression, a reduction was made by both the Corporation and the Commission in the wages of all employees connected with the utilities involved herein. This reduction has been maintained in wage schedules of all agreements between the employers and employees from 1932 down to and including the agreement for the year 1936.

The employees requested the employers to restore the wage cuts put into force in 1932 this year. This request was similar to the demands set out in the form of applications for the establishment of Boards of Conciliation and Investigation. The employees' request was considered by the employers, with the result that the employees were advised that the employers were not favourable to changing existing wage rates. A further discussion then occurred between the Commission and its employees, and the Commission, on the 27th of May, 1937, after reviewing the matter, passed the following resolution affecting all Commission employees:—

"That all cuts affecting employees earning $100.00 per month or less be restored in full, and that 50 per cent be restored of the reduction made in 1932 affecting those employees earning more than $100.00 per month, effective May 1, 1937."

The employees were duly advised of the terms of the above resolution. The employees notified the Commission that the offer was not accepted, and stated that unless the employees' request was complied with steps would be taken towards securing the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, R.S.C. 1927, Chapter 112, and amendments thereto.

The Corporation did not make any similar offer to that contained in the above resolution.

The employees contended that the wage cuts put in force in 1932 should be restored for the following reasons:—

(*a*) That the reduction made in 1932 was only intended to be a temporary reduction, but that it had been in force now for five years.

(*b*) That the economic depression which was the cause of the reduction in wages being made in 1932 was rapidly disappearing.

(*c*) That the employees were engaged in furnishing services to Public Utilities of the Corporation and Commission, the operation of which showed a yearly surplus since 1933.

(*d*) That the light and power Departments of the Commission had given large rebates to its customers, and had set up a large surplus or reserve.

(*e*) That the Commission admitted by the offer it made that conditions were not the same as existed in 1932-1933, and that the restoration of wage cuts requested by the employees was necessary in order to bring wages in line with conditions as they exist now; that while the Corporation had made no offer similar to that made by the Commission, working and living conditions were similar in both Cities.

(*f*) That the Hydro Electric Power Commission of Fort William, which Commission operates the light and power utility of the City of Fort William (and is, in reality, a part of the City Organization) and whose employees perform similar services in Fort William to the employees of the Commission in Port Arthur, had restored to its employees the wage cuts put in force in 1932, and that this Commission had just announced a rebate to its customers.

The employers contended that the present wage schedule should be maintained for the following reasons:—

(*a*) That while there is an improvement in conditions generally over those existing in 1932-33 conditions now are not comparable with those existing in 1928-29, and that if the wage cuts were restored it would establish wages on the same level as in 1928-29, which was not justified by present conditions.

(*b*) That wages paid to the employees by the employers were comparable with other Ontario cities, and, in fact, above the average paid in Ontario cities for the same class of service.

(*c*) That the Commission was faced with loss of revenue in its light and power department by reason of the poor western grain crop, with the consequent closing down of a number of elevators, and only a partial operation of the remaining elevators and also loss of revenue by reason of the Hydro Electric Power Commission of Ontario contract with the Lake Sulphite Company at Red Rock.

(*d*) The Corporation and the Commission pointed out that while their respective telephone departments showed surpluses these surpluses were all shown as the result of a reduction in capital charges, and that no depreciation or obsolescence reserve had been set out by either, and that both telephone systems were faced with capital expenditures for renewals and extensions of services, which would have to be provided for out of income.

(*e*) The Corporation stated that it dealt with its Public Utilities Departments as a whole, and that the telephone department was only one of the departments of its public utility services, and that as a whole the city made a loss in the operation of its utilities, and that any increase in wages would therefore have to be taken care of by taxation, and that no provision had been made in the city's estimates for 1937 for this purpose, and that without any increase in wages already great difficulty was being experienced in providing sufficient money to furnish many services that must be supplied by the Corporation.

Following a careful study of all evidence submitted the Board is of the opinion that the reduction in wages put into effect in 1932, was intended at that time to be only for a temporary period. Ability to pay is always a factor in consideration of wage rates, but the Board is not prepared to accept the prin-

43861—2½

ciple that a surplus necessarily means an increase in wages, or that a deficit necesasrily means a reduction in wages. The Board considers that the employees should be paid by their employers a fair and reasonable wage for the services rendered, taking everything into consideration. One of the employers, the Commission, after consideration, made the offer herein set out to the employees, showing that, in its opinion, the employes were entitled to a partial restoration of wage cuts, and fixing what, in its opinion, was a fair and reasonable wage for the services performed by its employees under present conditions. The Board feels that the Commission is still bound by such offer. The Board is of the opinion that whatever increases are made to employees in Port Arthur should also be made to employees in Fort William, notwithstanding that the Corporation made no such offer, as the Board feels that it would be unjust and inequitable if a restoration were made in Port Arthur, and not in Fort William, because the employees are all members of the same Union, working under similar agreements with the Corporation and Commission, and performing the same services for each, and living conditions are similar in both cities.

The Board has considered the wage rate, working and living conditions of employees in different Ontario cities performing the same services as the employees herein, and the wage rates, working and living conditions here, and the Board is of the opinion that taking everything into consideration the following recommendation will meet the circumstances as they are now.

The Board therefore makes its unanimous recommendation as follows:—

1. That full restoration of the wage cuts made in 1932 be made to employees receiving less than $100 per month; to employees receiving more than $100 per month a restoration of 50 per cent of the wage cut be made; all these rates to be in effect from May 1, 1937, to November 1, 1937. After November 1, 1937, that first class linemen receive a further restoration of one and one-quarter cents per hour, making their wages from that date eighty-five (85c.) cents per hour, and that the wages of all other employees be adjusted proportionately.

All of which is respectfully submitted.

Dated at Fort William this 31st day of August, A.D. 1937.

Mining in British Columbia in 1936

AN appreciable increase of $5,260,728 in the value of mine production during 1936 in comparison with the previous year is indicated in the annual report of the Minister of Mines, British Columbia. The value of mine production in 1936, totalled $54,081,967.

Lode-gold production, which the report states, in recent years has been establishing records in both volume and value, showed a further increase of 10·7 per cent in volume, and 10·2 per cent in value for 1936 as compared with 1935.

The total number of shipping-mines decreased from 177 to 168 in 1936, and those shipping over 100 tons decreased from 72 to 70.

Labour and Employment.—The report states that the number of men employed increased from 13,737 to 14,180 and wages and salaries increased from $16,753,367 to $17,917,221. Of the total number employed 2,814 were in coal mines, 4,799 were engaged in lode mining, 1,124 in placer-mining, 720 were employed in concentrators, 2,678 in smelters, 931 in quarries and pits, 826 in plants and 826 were listed as being engaged in "miscellaneous" employment in connection with mining.

Accidents.—Eight fatal accidents in and around coal mines occurred during 1936 as compared with five in 1935. The ratio of fatal accidents per 1,000 persons employed was 2·84, as compared with 1·67 in 1935. In 1934 the ration was 2·07; in 1933, 0·97; in 1932, 2·21; in 1931, 1·22 and in 1930, 11·62.

The number of fatal accidents per 1,000,000 tons produced during 1936 was 5·94; during 1935 the figure was 4·21; in 1934, 4·45; in 1933, 2·37, in 1932, 5·21; in 1931, 2·81; and in 1930, 2·86.

In the metalliferous mining group there were fourteen fatal accidents, a decrease of one from the figures of 1935. There was also one fatal accident in the quarries of the Province. The ratio of fatal accidents per 1,000 persons employed was 2·53 compared with 3·54 in 1935 and 4·86 in 1934. The tonnage mined per fatal accident during 1936 was 318,322 tons compared with 327,743 tons during 1935, while the tonnage mined per fatal accident for the last ten-year period was 404,358 tons.

The report also outlines safety and first-aid activities in mining operations during the year. The work of the four Provincial Government mine rescue stations—at Nanaimo, Cumberland, Princeton and Fernie is also summarized in the report.

According to a press despatch, Toronto newspaper stereotypers recently began a five-day, 40-hour work week under an agreement signed by publishers and officials of the International Stereotypers and Electrotypers Union.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1937

The following table shows the number of disputes, workers involved, and time loss for August, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*August, 1937	39	17,966	297,827
*July, 1937	37	6,411	69,276
August, 1936	36	9,864	72,034

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for August was only slightly greater than in July but many more workers were involved, most of them for considerable periods, and the time loss was very great, exceeding that in any month since July, 1925, when nearly 12,000 coal miners in Nova Scotia were on strike. Most of the time loss was due to a strike of cotton factory workers in several localities in the province of Quebec but there were also important strikes of cotton factory workers, woollen factory workers and hatters at Cornwall, Peterborough and Brockville in Ontario. These last were carried over from July and caused nearly one-half of the time loss during that month. The strikes mentioned were settled by referring the questions in dispute as to wages and hours to the provincial wage boards of Quebec and Ontario. There were also important strikes of foundry and shipyard workers at Sorel, P.Q., and lumber workers in the Miramichi Valley in New Brunswick. In August, 1936, most of the time loss was due to a strike of silk textile workers at Cornwall, Ont., and two strikes of coal miners in Nova Scotia.

Ten disputes, involving 2,598 workers, were carried over from July, including that of road construction labourers in the Kenora district of Ontario which was reported to the Department too late for inclusion in the statistical table for the August issue of the Labour Gazette. Twenty-nine disputes commenced during August. Of these thirty-nine disputes, thirty-one terminated during the month, seven resulting in favour of the employers involved, nine in favour of the workers concerned, while compromise settlements were reached in fourteen cases and the result of one dispute was recorded as indefinite. At the end of August, therefore, there were eight disputes recorded as strikes or lockouts, namely: coal miners, Wayne, Alta., rubber factory workers, Toronto, Ont., custom tailors, Toronto, Ont., lime plant workers, Blubber Bay, B.C., silk factory workers, Acton Vale, P.Q., clothing factory workers, Cornwall, Ont., lumber mill workers and lumber loaders, Campbellton, N.B., and steel foundry and shipyard workers, Sorel, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; and tannery workers, Toronto, Ont., June 1, 1937, one employer.

The dispute involving fur factory workers employed by seven employers in Winnipeg, Man., which commenced on August 11, 1936, and has been carried in the above list for some time, is reported by the union to have been terminated on August 28, 1937, and has been removed from the list.

The dispute involving glass factory workers employed by one firm with establishments at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., commencing August 19, 1936, and carried in the above list for some months has, as noted elsewhere in this issue, been also removed from the list during August

The strike of glass workers, members of the American Flint Glass Workers' Union of North America at Hamilton, Ont., which commenced on August 19, 1936, has been reported as having lapsed on May 25, 1937, following the resumption of work by a number of those on strike when negotiations brought about in April through the mediation of the Department of Labour did not result in a settlement (Labour Gazette, July 1937, p. 721). A sympathetic strike at Wallaceburg, Ont., and Redcliff, Alta.,

is reported to have been settled in August. These strikes were recorded as terminated on August 26, 1936, the strikers having been partially replaced at Hamilton and Wallaceburg, while at Redcliff the department affected was shut down. The dispute at Hamilton involved also members of the Glass Bottle Blowers' Association of the United States and Canada and the strike was for union recognition and the union wage scales, locals having been organized recently. At Wallaceburg and Redcliff operations were reported to have been under union agreements for many years.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A one day strike of coal miners at Caledonia, N.S., on July 31 was noted in the LABOUR GAZETTE for August, but full particulars had not been received. Later reports are that six hundred miners ceased work in protest against the transfer of two men from another mine, claiming that local men should be engaged. It was ascertained that no local men were qualified for the work and the dispute was terminated after one day.

A dispute involving a number of floorlayers at Toronto, Ont., on August 2 has been reported in the press. Information received indicates the men were members of the floorlayers' local of the United Brotherhood of Carpenters and Joiners who refused to work at piece rates or for less than 80 cents per hour, the minimum rate for carpenters under the union agreement obligatory for all employers and employees in the district under the Industrial Standards Act of Ontario. Some of the floorlayers secured this rate and commenced work. A meeting of union officials with the employers was expected within a short time.

A dispute involving highway construction labourers at Champigny, P.Q., on August 4 has been reported, the workers objecting to the use of steam shovels. The information secured in that the men did not cease work but sent a deputation to the provincial Minister of Highways to propose that more men would be employed if steam shovels were not used. The Minister assured them that no men would be displaced and the number employed was being increased from 775 to over 1,000, and work was carried on. A number of unemployed attempted to prevent the use of shovels and four of the leaders were arrested on charges of unlawful assembly, two being sentenced to imprisonment of fifteen and ten days. The result of the trial of the others has not been reported.

A dispute about August 19 involving sixty employees in a wooden barrel manufacturing establishment at Eagle Lake, Ont., has been reported in the press as a strike. Information reported to the Department is that the men objected to a change in the arrangements as to hours as it would decrease earnings, but continued to work when assured there would be no reduction in pay per day.

A minor dispute involving ten women in a waste material establishment at Hamilton, Ont., for four hours on August 6 has been reported, an increase in wages being secured.

A minor dispute has been reported which involved a number of employees in a car manufacturing establishment at Hamilton, Ont., for a short time on August 5, owing to a misunderstanding as to the piece work system. A satisfactory settlement was reported.

A minor dispute involved six beverage dispensers in one hotel in Toronto, Ont., for an hour on August 27, the employer signing an agreement with the Hotel and Restaurant Employees' International Alliance and Bartenders' International League.

Disputes by Industries

The following is a review of disputes by industries in which strikes and lockouts occurred during the month, giving particulars as to certain disputes in addition to the information given in the tabular statement.

Mining

No disputes were carried over from July but some time was lost for a few hours on certain days at one colliery at Glace Bay, N.S., the men ceasing work owing to excessive smoke from a nearby power plant, as the installation of equipment to prevent this had not been completed. The men had been on strike on this account from July 23 to July 30 as the situation had become worse when a new unit was added to the power plant.

The strike of coal miners at Glace Bay for one day, owing to breaks in mechanical equipment on August 5, involved only a portion of the staff and their work was performed by others.

The strike of coal miners at Midlandvale, Alta., from August 23 to August 31 was in protest against giving preference to new employees on the day shift. A preference for old employees was agreed upon.

The strike involving miners at Glace Bay in one mine for two night shifts, August 24 and August 25, was terminated when the management refused to employ an extra man to help a landing tender until more men were put to work in that part of the mine.

Manufacturing

Seven of the disputes were carried over from July and three of these were unterminated at the end of August, while eighteen disputes began during August and of these three were unterminated at the end of the month.

Rubber Products.—In connection with the strike in one establishment at Toronto, Ont., which began on June 21, against discharge of workers, the employer reported that ten or fifteen of the forty-five workers on strike had returned and that all of the others had been replaced but that any of those still on strike would be taken back as needed. The union continued to picket the establishment and reported the strike as still in effect at the end of the month.

The strike at Drummondville, P.Q., occurred when work had ceased for about ten days for the installation of a boiler. The strikers demanded recognition of the National Catholic Union and changes in working conditions and continued on strike for ten days after this period.

Fur, Leather, Etc.—The strike of employees in one tanning and leather manufacturing establishment at Huntsville, Ont., on August 13 involved members of a local of the Industrial Workers of Canada, affiliated with the Canadian Federation of Labour. The strikers demanded a closed union shop and increases in wages of five cents per hour. The employer reported that 135 employees ceased work whereas the union claimed there were 300 on strike. The company offered increases of three cents per hour to those receiving under 25 cents per hour and two and one-half cents per hour to the others with proportionate increases for piece workers; also recognition of a committee of employees but refused to deal with any persons not employees. The establishment was picketed and no foremen or other workers were allowed to enter. As a result of conciliation by the Ontario Department of Labour and the Mayor a settlement was reached and work was resumed on August 26. The company agreed to make the increases previously offered with further increases of one cent per hour on January 1 and again on April 30, 1938; also to recognize a shop committee elected by departments, any disputes not settled by conciliation of the Ontario Department of Labour to be arbitrated. The agreement as to the settlement is to be in effect until May 31, 1938.

Boots and Shoes (Leather).—The strike at Preston, Ont., involving members of Local No. 7 of the Canadian Shoe Workers' Union was against the dismissal of one worker for alleged incompetence, an elderly man who had been with the firm for some years. As a result of negotiations the management agreed to give him employment at other work and operations were resumed on August 12.

Textiles, Clothing, Etc.—In connection with the strike of custom tailors at Toronto which began on May 20, 1937, involving members of the Journeymen Tailors' Union of America, against one firm which refused to negotiate with the union, a picket was convicted on a charge of assaulting a worker and was fined.

The strike of hat factory workers at Brockville, Ont., on June 26 involving members of the United Hatters, Cap and Millinery Workers' International Union, was terminated as a result of conciliation by the Premier of Ontario and members of the Ontario Labour and Industry Board following the rejection by the union of an offer of the company as a result of conciliation by the officers of the federal and provincial Departments of Labour. Work was resumed on August 23. The settlement provides for the abolition of the Bedeaux system of wage payment and the adoption of a piece rate system, recognition of a shop committee elected by departments under the supervision of the Ontario Department of Labour, arbitration of any disputes, the chairman of the arbitration Board of three members to be appointed by the Ontario Minister of Labour if the others do not agree; the dispute as to wages and hours to be submitted to the Ontario Industry and Labour Board for the establishment of a schedule for the men's hat industry in Ontario under the Industrial Standards Act; no discrimination or intimidation by either employer or employees with respect to trade union membership or activities or participation in the strike. The agreement as to the settlement is to be in effect until September 1, 1938, and negotiations for a renewal are to be begun sixty days prior to that date. On August 12 a striker was convicted of assaulting a worker and fined $10 and costs. On August 14 arrangements as to picketing were made by the provincial and local police authorities with a view to the prevention of possible disorder and to the stopping of abusive and threatening language as well as of mass picketing. The company began operations on women's hats in Prescott, Ont., and on men's hats at Marieville, P.Q., about the middle of the month. Seven of the supervisors transferred from Brockville were attacked at the latter locality on August 12 by ten men. On August 17 three men arrested on charges of committing the assault were released on bail of $1,000 at St. Hyacinthe, P.Q.

The strike of cotton factory workers at Cornwall, Ont., in three establishments operated by one company was settled as a result of the conference of the parties involved with the Premier of Ontario and other Ontario gov-

ernmental representatives which dealt with the strike of woollen mill workers at Peterborough, Ont., the terms of settlement being the same, namely that the provincial Industry and Labour Board establish a schedule of wages and hours for the industry under the Minimum Wage Act, 1937, the wage rates to be effective from resumption of work; the election of a grievance committee of employees; no discrimination for strike participation or union membership, etc., work to be resumed on August 23, 1937. Preparatory work was begun on August 20.

A second strike occurred in three cotton mills at Cornwall, Ont., on August 26, the workers alleging discrimination contrary to the strike settlement when some employees in one mill were discharged for insubordination. It appears that the strike was spontaneous, no proposals were made to the management and union officials were not informed as to the trouble. As a result of conciliation by an official of the Ontario Department of Labour preparatory work was resumed on August 31 and the mills were again in operation on September 1. It was arranged that no strikes of such a kind would occur again and that future disputes would be dealt with by the grievance committee.

The strike of workers in two woollen mills at Peterborough, Ont., operated by the same company, which commenced on June 29, was terminated as a result of a conference of the parties involved with the Premier of Ontario, attended also by the Honourable Peter Heenan, Minister of Lands and Forests (Minister of Labour for Canada from 1926 to 1930), Mr. P. M. Draper, President of the Trades and Labour Congress of Canada, and certain Ontario Department of Labour officials. The settlement provided that wages and hours should be according to a schedule to be established by the Industry and Labour Board of Ontario for the manufacturers of similar products in Ontario under the Minimum Wage Act, 1937, such minimum rates to be paid from the date of resumption of work; payment for waiting time for piece workers, rest periods for female employees; negotiations as to grievances other than those as to wages and hours with a committe of employees elected for the several departments under the supervision of the Ontario Department of Labour; no discrimination as to participation in the strike or as to union membership; distribution of piece work fairly among employees; a minimum of four hours work for each employee called to work; payment of wages in cash each week; thirty days' notice for cancellation of agreement as to the settlement; work to be resumed on August 20. On that day in one of the mills the employees on returning to work found that all were not being employed immediately and that a number of employees who worked during the strike were at work, and left the plant. At a meeting with the manager later in the day it was explained that all would be employed in a short time and it was agreed that work would be resumed on the following Monday, August 23. On August 10 the company had opened the mills, about 115 employees entering one mill and about 75 the other. Resistance by a large body of pickets at the latter resulted in a clash with the police and tear gas bombs were used. About fifteen were arrested on charges of intimidation, assault, etc., including union officials charged with inciting to riot and obstructing the police. In court on September 1 charges against several were withdrawn, the others being committed for trial.

The strike of cotton factory employees in the establishments of one company and its subsidiaries in the Province of Quebec on August 2 was to secure a union agreement with increased wages, reductions in hours to 48 per week from 55 per week for the day shift and 60 for the night shift, twelve hours per day for five days per week. The strikers were members of the Syndicates of the National Catholic Federation of Textile Workers in four mills in Montreal, and in one each at St. Gregoire de Montmorency, Sherbrooke, Magog, Drummondville and Valleyfield. The employing company stated that less than one-half of the employees were on strike, the others being unable to work owing to the stoppage, whereas the union claimed a large majority of the employees were members. Numbers of employees continued to carry on operations in some of the plants but all were picketed and in some cases officials were prevented from entering and the transport of goods was prevented. On August 4 the mills were closed down by the company. The union had proposed that the company participate in negotiations for a collective agreement for the industry throughout the province under the Act Respecting Workmen's Wages, 1937, which replaced the Collective Labour Agreements Extension Act, 1934, with some changes. The company refused, proposing that wages and hours should be set by the Fair Wage Board under the Fair Wages Act, 1937, which replaced the Minimum Wage Act, 1919 (LABOUR GAZETTE, July, 1937, page 748). On August 5 the Minister of Labour for Quebec announced that he had offered to mediate in the dispute, proposing that the strikers resume work referring the dispute as to wages and hours to the Fair Wage Board under the Fair Wages Act coming into force on September 1, the rates to be retroactive. This was accepted in principle

by the company. The union stated its preference for a collective agreement under the Workmen's Wages Act and negotiations broke down on August 9. On August 11 representatives of the union met the Acting Minister of Labour and Minister of Justice for Canada requesting federal intervention. The Minister stated that a Board under the Industrial Disputes Investigation Act could be established only on the application of both parties. The company having announced that the wage scale established by the Fair Wage Board would be paid from the day work was resumed, on August 19 three of the mills in Montreal were re-opened and numbers of employees resumed work, variously reported at from 250 to 700 in number out of 3,000. Pickets in large numbers at each mill attempted to prevent this and clashes with the police occurred, and over a dozen were arrested on charges of assault, obstruction, etc. Some of these were fined and others committed for trial. The windows of one mill were reported to have been completely demolished. A number of police and others were reported to be injured but none seriously enough to require hospital treatment. The fourth mill in Montreal was opened on the following day without trouble. In the localities outside of Montreal affected by the strike some interference with workers and company officials and damage to property early in the strike was reported. On August 24 the Mayors of the cities affected by the strike arranged to meet to find some means of settling the dispute. On the following day the Cardinal-Archbishop of Quebec proposed that the parties to the dispute should meet with the Premier of Quebec as mediator. As a result of meetings on August 27 an agreement as to a settlement was signed by the company and union officers, providing for an immediate termination of the strike, the re-engagement in the same positions of all employees on the payrolls on July 31, the establishment of a joint committee of four representatives of the employers, two representatives of the National Catholic Union and two representatives of other employees to negotiate collective labour agreements for the various plants to be signed before March 1, 1938, no closed shop or preferential clauses to be included; the payment of wages as determined by the Fair Wages Board from the time of resumption of work; if no understanding as to a collective agreement is reached by March 1, 1938, the conditions set by the Fair Wages Board to be incorporated in a collective agreement effective for six months. Work was resumed on August 30.

The strike of employees in one boys' clothing establishment in Montreal from August 10 to August 12 involved members of the Amalgamated Clothing Workers of America and was terminated as a result of mediation by one of the city aldermen. All employees were reinstated and a union agreement was signed.

The strike of silk factory workers in one establishment at Acton Vale, P.Q., involved members of the National Catholic Union seeking a closed shop agreement. The employer proposed that the wage scale should be established under the Fair Wages Act, 1937, to come into force on September 1. The employer reported that many of the employees were kept from work by pickets and that employees in a dressmaking establishment in the building were kept out although they had no dispute with the employer. Fourteen persons were arrested by August 19 on charges of inciting to riot, unlawful assembly, assault and intimidation. At the end of the month a settlement had not been reported.

The strike of woollen factory workers at Sherbrooke, P.Q., involved a number of weavers, members of the Textile Workers' Union, independent, which alleged discrimination in favour of members of the National Catholic Union, when two apprentices were taken on. A clash between members of the two unions on August 13 was ended by police. On August 16 the strikers returned and those who had not been replaced were re-engaged.

Miscellaneous Wood Products.—The strike of saw-mill workers at Foleyet, Ont., which began on July 22, was terminated on August 19th as a result of conciliation by the Honourable Peter Heenan, Ontario Minister of Lands and Forests. An increase in wages was agreed upon but recognition of the saw-mill workers' local of the International Carpenters' Union was refused. The right to belong to the union, however, was recognized.

The strike of employees of two sash and door factories at Vancouver, B.C., from August 9 to August 14, involved members of the Lumber and Sawmill Workers' Union affiliated with the Committee for Industrial Organization. The employers refused to negotiate with the union representatives and conciliation by the provincial Department of Labour was not successful. The minimum wage rate for unskilled workers was increased by the provincial Board of Industrial Relations but the skilled men demanded increases also. During the strike the carpenters' unions were reported to have refused to handle the products of the employers. Negotiations finally resulted in a settlement, the employers agreeing to increase wages seven per cent immediately and five per cent after two months, shop committees to be recognized.

The strike of saw-mill workers and lumber loaders (longshoremen) at Newcastle, Chatham, etc., in the Miramichi Valley in New

Brunswick involved members of the New Brunswick Farmer-Labour Union, a recently organized body. The strike began in one mill with forty-five workers who had applied to the provincial Fair Wage Board appointed on

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1937*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to August, 1937				
MANUFACTURING—				
Rubber Products—				
Rubber factory workers, Toronto, Ont.	1	35	800	Commenced June 21, 1937; against discharge of workers alleged to be for union activity; unterminated.
Textiles, Clothing, etc.—				
Custom tailors, Toronto, Ont.	1	20	500	Commenced May 20, 1937; for union recognition, wage increases, etc.; unterminated.
Hat factory workers, Brockville, Ont.	1	174	5,500	Commenced June 26, 1937; for union recognition, increased wages and changes in working conditions; terminated Aug. 21; conciliation (provincial); compromise.
Textile factory workers (woollen), Peterborough, Ont.	2	340	5,000	Commenced June 29, 1937; for increased wages; terminated Aug. 19 and Aug. 20; conciliation (provincial); compromise.
Cotton factory workers, Cornwall, Ont.	3	1,700	28,000	Commenced July 21, 1937; for recognition o union, increased wages and improved work ing conditions; terminated Aug. 21; concilia tion (provincial); compromise.
Miscellaneous Wood Products–				
Sawmill workers, Foleyet, etc., Ont.	2	150	2,400	Commenced July 22, 1937; for union recognition and increased wages; terminated Aug. 19; conciliation (provincial); compromise.
Non-Metallic Minerals—				
Lime plant workers, Blubber Bay, B.C.	1	133	3,000	Commenced July 23, 1937; for union recognition and increased wages; unterminated.
CONSTRUCTION—				
Highway—				
Road construction workers, Kenora district, Ont.	1	31	62	Commenced July 28, 1937; for change in working conditions (complaints against contractor); terminated Aug. 4; job closed down; indefinite.
SERVICE—				
Business and Personal—				
Restaurant employees, Regina, Sask.	1	7	100	Commenced July 15, 1937; against dismissal of employees; lapsed Aug. 31; in favour of employer.
Waitresses (restaurant), Vancouver, B.C.	1	8	200	Commenced July 17, 1937; for recognition of certain union and increased wages; terminated Aug. 31; negotiations; in favour of workers.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1937*—*Continued*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during August, 1937				
MINING, ETC.—				
Coal miners, Glace Bay, N.S.	1	60	60	Commenced Aug. 5; to secure extra pay for time lost owing to breaks in mechanical equipment; terminated Aug. 5; in favour of employer.
Coal miners, Midlandvale, Alta.	1	100	800	Commenced Aug. 23; against alleged discrimination in allotment of work hours; terminated Aug. 31; negotiations; compromise.
Coal miners, Glace Bay, N.S.	1	10	20	Commenced Aug. 24; for employment of an extra man; terminated Aug. 25; negotiations; in favour of employer.
Coal miners, Wayne, Alta.	1	60	360	Commenced Aug. 25; against change in working conditions; unterminated.
MANUFACTURING—				
Vegetable Foods—				
Canning factory workers, Valleyfield, P.Q.	1	65	32	Commenced Aug. 26; for increase in wages and against piece work; terminated Aug. 26; negotiations; compromise.
Rubber Products—				
Rubber factory workers, Drummondville, P.Q.	1	65	650	Commenced Aug. 12; for improved working conditions; terminated Aug. 31; negotiations; compromise.
Fur, Leather, etc.—				
Leather factory workers, Huntsville, Ont.	1	135	1,550	Commenced Aug. 13; for increased wages and closed union shop; terminated Aug. 26; conciliation(provincia[); compromise.
Boots and Shoes—				
Shoe factory workers, Preston, Ont.	1	140	210	Commenced Aug. 11; against dismissal of worker; terminated Aug. 12; negotiations; in favour of workers.
Textiles, Clothing, etc.—				
Silk factory workers, Cap de la Madeleine, P.Q.	1	50	250	Commenced Aug. 2; for increased wages (piece rates); terminated Aug. 7; conciliation (municipal); in favour of workers.
Textile factory workers, Montreal, etc., P.Q.	9	9,000 (a)	200,000	Commenced Aug. 2; for union agreement increased wages and 48 hour week; termi nated Aug. 28; conciliation (provincial) compromise.
Clothing factory workers, (boys), Montreal, P.Q.	1	36	78	Commenced Aug. 10; against discharge of workers alleged to be for union activity; terminated Aug. 12; negotiations; in favour of workers.
Silk factory workers, Acton Vale, P.Q.	1	100	1,700	Commenced Aug. 11; for closed shop agreement with increased wages; unterminated.
Textile factory workers (woollen), Sherbrooke, P.Q.	1	28	70	Commenced Aug. 12; against employment of members of another union; terminated Aug. 14; return of workers; in favour of employer.

(b) Strikes and Lockouts commencing during August, 1937—*Continued*				
Silk factory workers, Montmagny, P.Q.	1	104	156	Commenced Aug. 18; for increased wages, union recognition and improved working conditions; terminated Aug. 19; conciliation (provincial); in favour of workers.
Clothing factory workers (men's), Cornwall, Ont.	2	250	1,500	Commenced Aug. 25; for union recognition and against dismissal of workers alleged to be for union activity; unterminated.
Cotton factory workers, Cornwall, Ont.	3	1,700	8,000	Commenced Aug. 26; alleged discrimination, discharge of workers; terminated Aug. 31; conciliation (provincial); in favour of employer.
Miscellaneous Wood Products–				
Sash and door factory workers, Vancouver, B.C.	2	125	750	Commenced Aug. 9; for increased wages; terminated Aug. 14; negotiations; in favour of workers.
Lumber mill workers, lumber loaders, etc., Miramichi district, N.B.	14	1,500	14,000	Commenced Aug. 20; for increased wages, reduced hours and union recognition; terminated Aug. 31; conciliation (municipal); compromise.
Lumber mill workers, lumber loaders, etc., Campbellton, N.B.	.....	300	1,200	Commenced Aug. 27; for increased wages, reduced hours and union recognition; unterminated.
Metal Products—				
Steel foundry and shipyard workers, Sorel, P.Q.	5	1,200	20,000	Commenced Aug. 4; dissatisfaction with wage rates reached in settlement of strike on June 3; unterminated.
Non-Metallic Minerals—				
Brick and tile plant workers, Kitchener, Ont.	1	12	12	Commenced Aug. 5; against discharge of workers for misconduct and for increased wages; terminated Aug. 5; return of workers; in favour of employer.
Brick plant workers, Milton, Ont.	1	29	15	Commenced Aug. 3; for increased wages; terminated Aug. 3; negotiations; in favour of workers.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters, Cornwall, Ont.	1	25	25	Commenced, Aug. 24; for dismssal of foreman who discharged certain employees; terminated Aug. 24; conciliation (provincial); compromise, discharged men reinstated.
Highway—				
Truck drivers, Berthierville, P.Q.	1	10	40	Commenced Aug. 11; for increased wages; terminated Aug. 16; negotiations; compromise.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1937—*Concluded*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during August, 1937—*Concluded*				
Road construction workers, Coboconk, Ont.	1	29	29	Commenced Aug. 16; against "no smoking" order; terminated Aug. 16; negotiations; in favour of workers.
Road construction workers, Miramichi district, N.B.	.....	100	600	Commenced Aug. 20; for increase in wages; terminated Aug. 26; negotiations; compromise.
TRANSPORTATION—				
Water—				
Longshoremen, Owen Sound, Ont.	2	60	18	Commenced Aug. 11; for increased wages; terminated Aug. 11; return of workers; in favour of employer.
Longshoremen, Campbellton, N.B.	1	40	40	Commenced Aug. 14; for increased wages and reduced hours; terminated Aug 14; negotiations; compromise.
TRADE—				
Teamsters (flour, feed, etc.), Sorel, P.Q.	1	25	100	Commenced Aug. 5; for increased wages; terminated Aug. 9; negotiations; in favour of workers.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.
(a) Including those indirectly affected.

(Continued from page 966)

August 4 for the establishment of minimum wage rates and better working conditions. The Board met on August 12 and dealt with the case but the men ceased work before the decision was announced or became effective.

The provincial government proposed that the men should resume work pending the decision of the Board as to working conditions but the union made demands on all employers in the district for a minimum rate of 28 cents in saw-mills and 50 cents to 65 cents for loading lumber. This being refused, employees in mills throughout the district ceased work on August 20, involving seven and finally fourteen or more mills, only three being still in operation. On August 23 the union applied to the federal Department of Labour for conciliation but were informed that the matter was in the hands of the provincial authorities. On August 27 the municipal councils in the district set up a committee to bring about negotiations between the union and the employers. A settlement was reached on August 31 and work resumed immediately. It was agreed that mill workers would receive a minimum wage of 28 cents per hour and longshoremen 45 cents to 60 cents per hour, an increase of five cents per hour for several classes of work. A number of road construction workers also joined in the strike as recorded in another paragraph.

The strike of lumber mill employees in Campbellton, N.B., was similar to that in the Miramichi Valley, but began later and was not terminated until early in September, the result being reported as similar.

METAL PRODUCTS.—The strike at Sorel, P.Q., on August 4, involved employees in foundries and shipyards who refused to accept the award of an arbitration board set up in settlement of strikes of foundry workers in May and June. Employees in two ship repair establishments were also involved in the strike. The strikers presented to the employers a draft agreement with the National Catholic Syndicate of Steel Workers, providing for a ten-hour day, 55 hours per week, with a minimum wage of $18 per week for men, and the closed union shop. On August 11 representatives of the parties to the dispute met with officials of the provincial Department of Labour, it

being proposed that the dispute should be referred to the Fair Wage Board to be set up on September 1. This, however, was refused by the strikers. On August 15 a clash occurred between strikers and non-strikers when an attempt was made to reopen one of the plants and a house and an automobile were reported to have been set on fire. Four men were arrested and lodged in jail. A body of provincial police was called to protect the jail against a mob demanding the release of the prisoners. On August 17 at one of the shipyards a minimum of 35 cents per hour was offered, the wage scale to be set by the provincial authorities, and one hundred men were reported to have resumed work on that day and 250 on the next day in two of the other plants, followed by others on following days. By August 23 all six plants were reported to be operating partially. At the end of the month the dispute was unterminated.

Construction

HIGHWAY.—The strike of road construction workers near Kenora, Ont., on July 28 (noted in the LABOUR GAZETTE for August) was terminated on August 2 but work ceased again on August 4. The contract was terminated through the intervention of the Honourable Peter Heenan, Minister of Lands and Forests for Ontario, the job being closed down.

Service

BUSINESS AND PERSONAL.—The strike involving members of the Cooks' and Waiters' local of the Hotel and Restaurant Employees' International Alliance and Bartenders' International League was terminated by the end of the month, the employer signing an agreement with the union and reinstating those on strike.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1936. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in July was 64 and 26 were still in progress from the previous month, making a total of 90 in existence during the period, involving 122,900 workers with a resultant time loss of 512,000 man working days.

Of the 64 disputes beginning in July, 21 were over demands for increases in wages, 12 were over other wage questions, 2 over questions of working hours, 19 over questions respecting the employment of particular classes or persons, 5 over other questions respecting working arrangements, and 5 on questions of trade union principle.

Final settlements were reached in 66 disputes of which 15 were settled in favour of the workers, 33 in favour of the employers and 18 resulted in compromises. In the case of 10 other disputes work was resumed pending negotiations.

The most important strike in July occurred in the Yorkshire coal fields where dissatisfaction with wages on the part of haulage hands and other youths and boys led to a strike of 20,000 employees of the majority of collieries in the county. About 75,000 other employees were indirectly affected. The strike began on July 12 at certain colleries and spread rapidly during the week beginning July 19. Work was resumed at a few colleries pending district negotiations. On July 24, an agreement providing for increased basis rates for underground and surface dayworkers generally was reached between the South Yorkshire Coal Trade Association and the York Mine Workers' Association and on July 27 the West Yorkshire Coal Owners' Association also decided to put into operation scales which increased basis rates for dayworkers. These increases led to a resumption of work in the majority of the colleries involved.

Argentina

Industrial disputes in the Republic of Argentina during the year 1936, numbered 109 of which 97 began during the year and 12

were carried over from the preceding year. The number of workers involved was 85,438 and the resultant time loss was 1,344,461 man working days.

Settlements in favour of the workers were reached in 33 disputes, 44 were settled in favour of the employers, 27 resulted in compromises, the result of one strike was unknown, and one dispute was unterminated at the end of the year. Results of the remaining three strikes, which were sympathetic ones, are not shown.

In the classification of disputes according to causes, 28 involving 74,484 workers (87 per cent of all workers on strike) are shown as arising out of "demands for increased wages and union and other worker relationship questions"; 36 disputes, involving, 6,571 workers, were over wage questions alone. No large number of workers, was shown as being involved in the strikes classified under other causes.

India

The Government of India has recently published a report on industrial disputes which occurred in the years 1929 to 1936. During the eight years covered by the report the average number of strikes each year was 145, the average number of workers involved was 209,945 and the average time-loss was 3,629,253 man working days.

During the same period 48.4 per cent of the disputes were in cotton and woollen mills, 8.2 per cent were in jute mills, 3.0 per cent in engineering workshops, 2.9 per cent in railways (including railway workshops), 1.0 per cent in mines, and 36.3 per cent in other types of industry.

During 1936 there were 157 disputes in which 169,029 workers were involved with a resultant time loss of 2,358,062 man working days. In 96 cases, the disputes arose over demands connected with wages, 24 were over questions of personnel, 6 were over questions of leave and hours, and 31 were over other questions. In 31 strikes the workers were successful, in 43 they were partially successful and in 76 they were unsuccessful; 7 strikes were still in progress at the end of the year. During the year, 37.0 per cent of the disputes were in cotton and woollen mills, 8.9 per cent in jute mills, 1.9 per cent in engineering workshops, 0.6 per cent in railways, 1.9 per cent in mines, and 49.7 per cent in other types of establishments.

United States

Preliminary estimates of strikes in June, 1937, which as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources, and are subject to revision as more definite reports are received" show 575 strikes as beginning during the month, which with 300 unterminated at the end of May, made a total of 875 in progress during the period. The number of workers involved was 375,000 and the time loss was 4,500,000 manworking days. As compared with May, these figures show an increase of 16 per cent in the number of strikes, a decrease of 25 per cent in the number of workers involved, and an increase of about 60 per cent in time loss. The time loss in June was the greatest in any month since the beginning of 1927, when time loss figures were first compiled by the Bureau of Labour Statistics. The large figure is accounted for, to a considerable extent, by the strike in the steel industry which began in May and continued throughout June.

As compared with June, 1936, the estimates for June of this year show increases of 205 per cent in the number of strikes, about 230 per cent in the numbers of workers involved, and nearly 240 per cent in the amount of time loss.

One of the most important strikes reported in the press during August was that of silk and rayon workers called out by the Textile Workers' Organizing Committee. Workers, reported to number between 30,000 and 40,000, mainly in Pennsylvania, New Jersey and New York, struck about August 10, for signed contracts providing for union recognition and increased wages. In New England, another important silk and rayon centre, most of the mill operators hal already signed contracts, making strikes unnecessary. By the end of the month most of the employees involved had returned to work as the result of negotiations with their individual employers, or with the newly formed National Association of Silk and Rayon Manufacturers or as a result of mediation carried on by an appointee of the federal Department of Labour. The settlements reported a substantial measure of success for the workers.

According to figures issued recently by the Dominion Bureau of Statistics, production of establishments engaged wholly or principally in linotype, monotype and hand composition for the printing trade in 1936 was valued at $653,946 compared with $536,051 in 1935. There were 33 establishments employing 269 persons and wages and salaries amounted to $395,315.

On August 24, it was announced that Home Improvement Plan Loans throughout Canada amounted to $8,249,685.33 at that date, the number of contracted loans totalling 21,467 up to July 31, home improvement loans in cities and towns totalled 14,340, and amounted to $5,705,065.03.

TRADE UNIONISM IN CANADA

Summary of the Twenty-Sixth Annual Report on Labour Organization

THE twenty-sixth annual report on Labour Organization in Canada, covering the calendar year 1936, has been published recently by the Labour Intelligence Branch of the Department of Labour. The aim in the publication of this series of reports has been to give statistical and other information concerning central labour organizations, delegate bodies and local unions operating in Canada. In addition to describing many phases of the trade union movement in the Dominion, the present report contains information as to labour organizations throughout the world, revolutionary workers' organizations, Canadian associations of wage-earners other than trade unions, etc.

In the main, labour organizations in Canada fall into two classes: (1) local branches of international bodies having membership in the United States and Canada; and (2) unions whose membership is wholly in the Dominion. There are two principal types of labour organizations: (1) the craft union, which includes workmen in a single craft or a number of related crafts or trades, for instance, carpenters or machinists; and (2) the industrial union, having members in the various occupations in a particular industry, such as coal mining.

Trade Union Membership.—According to returns received in the department from trade unions or other reliable sources, the total membership of all classes of trade unions in Canada at the close of 1936 was 322,473, an increase of 41,769 over the previous year, comprised in 2,886 local branch unions, a gain of 158 as compared with 1935. The international union group, consisting of the Canadian members of 88 central organizations, 6 more than recorded in 1935, had 1,896 branches in the Dominion, an increase of 102, with a combined membership of 174,769, a gain of 31,199. Included in the international group was the Industrial Workers of the World, with a reported membership in Canada of 4,200 (no change from 1935) comprised in 11 local branch unions, a loss of 1? The group of Canadian central organizations, which numbered 28, a gain of 5, had 740 branches, an increase of 6, with a combined membership of 83,841, a gain of 3,763. The National Catholic group consisted of 190 syndicates and study circles, an increase of 50, the membership as reported by the general secretary of the Confederation of Catholic Workers of Canada being 45,000, a gain of 7,000 over 1935. The independent units numbered 60, an increase of 11, the membership reported by 54 units being 18,863, which exceeded by 2,004 that reported by 43 units in 1935.

Percentage of Trade Unionists and Organized Wage-Earners to Population.—According to the latest estimate of population, trade unionists in 1936 represented 2·9 per cent of the total population of Canada; adding 115,864, the number of members comprised in the non-trade union associations, organized wage-earners in the Dominion at the close of 1936 represented approximately 4 per cent of the entire population.

Division by classes.—The accompanying table shows the number of branches and the memberships of the various classes of labour organizations operating in Canada at the close of 1936, together with the number of members of each affiliated group.

Union Membership by Industrial and Trade Groups.—The division of trade union membership among the various industries and trade groups is shown in the following table. The membership of each central body is included in the trade group in which most of its members are employed.

Group of Industries	Membership	Percentage
Mining and Quarrying	21,987	6·82
Building	32,446	10·06
Metal	26,200	8·12
Printing and Papermaking	16,027	4·97
Clothing, Boot and Shoes	23,285	7·22
Railroad Employees	72,239	22·40
Other Transportation and Navigation	26,594	8·25
Public Employees, Personal Service and Amusement	30,810	9·56
All other trades and general labour	72,885	22·60

Trade Union Branches by Provinces.—The division by provinces of the 2,886 local branch unions of all classes in Canada for 1936 was as follows: Ontario, 1,093; Quebec, 573; British Columbia, 295; Alberta, 278; Saskatchewan, 193; Manitoba, 188; Nova Scotia, 138; New Brunswick, 116; and Prince Edward Island, 12.

Trade Union Membership in Canadian Cities.—There were 30 Canadian cities having not less than 20 trade union branches, two more than the number recorded in 1935. The 1,695 branches in these 30 localities represented 58 per cent of the local branches of all classes operating in Canada. The 1,471 reporting branches in these cities represented approximately 60 per cent of all reporting branches in the Dominion.

Unions Having Large Memberships in Canada.—Of the 88 international organizations with branches or members in Canada, there were 12 with 5,000 or more members, 5 of these being composed of employees who are identified with railway operations. In the Canadian group were two bodies with over 5,000 members, one being a railway organization. These 14 bodies represent a Canadian trade union membership of 119,476 (comprised in 931 local branches)—approximately 37 per cent of the total membership and about 32 per cent of the total trade union branches.

Trade Union Benefits.—Of the 28 Canadian central organizations, 5 reported expenditures for benefits, the total amount disbursed being $67,989.17, an increase of $40,617.93 as compared with the figures furnished by the same number of organizations in 1935. Of the 88 international organizations operating in the Dominion 61 reported having expended in Canada and the United States a total of $20,228,178 in benefits, an increase of $2,096,700. The disbursements of the international organizations in 1936 for the various classes of benefits were:—

Death benefits	$12,138,708
Unemployed and travelling benefits	1,272,323
Strike benefits	874,235
Sick and accident benefits	1,915,898
Old age pensions and other benefits	4,027,014

Classes of Labour Organizations	Number of Main Organizations	Local Branches	Membership
Trades and Labour Congress of Canada—			
International craft organizations	62	1,471	136,696
Canadian central bodies	4	110	4,478
Directly chartered unions	.....	98	8,224
	66	1,679	149,398
All-Canadian Congress of Labour—			
(a) Canadian central bodies	6	276	27,489

	6	318	31,383
Canadian Federation of Labour—			
Canadian central bodies	6	60	25,081
Directly chartered unions	.....	5	.....
	6	65	25,081
National Catholic Unions	1	190	45,000
Other Canadian central bodies	9	149	14,675
Independent local units	.....	60	18,863
Unaffiliated international unions—			
Railway organizations	5	355	22,943
(b) Other international organizations	20	59	10,930
Industrial Workers of the World	1	11	4,200
	26	425	38,073
All Canadian Organizations	26	990	147,704
All international organizations (comprising international organizations affiliated with the Trades and Labour Congress of Canada, and unaffiliated international unions	88	1,896	174,769
Grand totals	114	2,886	322,473

(a) As question has arisen regarding the affiliation of certain organizations during the calendar year 1936, the following note in this connection is appended to the above statement:

(1) The Canadian Association of Railwaymen, as at December 31, 1936, had paid per capita tax on its membership for the full calendar year to the A.C.C.L. While now claimed by the C.F. of L., information from documents circulated over the signature of the president indicates that the Association at present is not associated with any national organization.

(2) The Amalgamated Building Workers of Canada was still affiliated with the A.C.C.L. as at December 31, 1936, but notified the department on January 13, 1937, that its affiliation had been transferred to the C.F. of L. Our information is that this decision was reached on January 11th at an executive meeting.

(3) The Canadian Brotherhood of Ships' Employees, with three locals and a reported membership of 4,500, according to the information before the department, was not affiliated with either the A.C.C.L. or the C.F. of L., although co-operating with the former, as at December 31, 1936. Consequently this organization is classified with "Other Canadian central bodies".

(b) Not affiliated with the Trades and Labour Congress of Canada. Each central body is included in the trade group in which most of its members are employed:

In addition to the expenditure made by the central organizations, the local branch unions disbursed benefits to their own members. The aggregate amount of such expenditure by 717 local branch unions was $411,907, which was $27,809 larger than that reported in 1935 by 711 local branches. The outlay for the various classes of benefits by local branch unions in 1936 was:—

Death benefits	$ 59,679
Unemployed benefits	143,520
Strike benefits	48,391
Sick and accident benefits	100,127
Other benefits	60,190

Non-Trade Union Associations.—Apart from the organizations identified with the labour movement in the Dominion, there are a considerable number of associations which cannot be included in the category of trade unions, but whose importance warrants some reference to them in a report intended to indicate the numerical strength of organizations of wage-earners operating in the Dominion. Reports were received from 119 such bodies, including associations of school teachers, government employees and commercial travellers, with a combined membership of 115,864.

Complete Labour Organization Directory.—As in previous issues, the twenty-sixth annual report on Labour Organization in Canada includes a complete labour organization directory, containing not only the names and addresses of the chief officers of local branch unions and delegate bodies in the Dominion, but also those of the central organizations with which Canadian trade unionists are identified. A new feature of this directory is the recording of the names and chief officers of those local unions concerning which information was received in the department which were formed during the interval between the dates at which reports were received from the central organizations and the publication of this review.

Copies of this report may be obtained from the Department of Labour at a nominal charge of 50 cents per copy.

According to statistics supplied by the Workmen's Compensation Board of Ontario, there was a total of 6,799 accidents reported to the Board during August. There were thirty-five fatalities during the month, and total awards for compensation and medical aid amounted to $457,636.42, the cost of medical aid only being $90,743.97.

Hours of Work in Oil and Gas Drilling in Alberta

In Alberta the Hours of Work Act (LABOUR GAZETTE November, 1936, pp. 995-6) which came into effect on September 1, 1936, provides for an eight-hour day and a 48-hour week for female employees and a nine-hour day and 54-hour week for male employees with 24 hours rest in every seven days. After an inquiry the Board of Industrial Relations may exempt from the hours of rest provision any industrial undertaking whose operations are ordinarily continuous, and may also prescribe that the maximum hours of work of any employee in any industry shall be less than the maximum set in the Act. Further, regulations may determine the extent to which the hours of work may be exceeded in those processes which must be carried on continuously and the Board is empowered to fix the maximum of additional hours in each case.

After an inquiry into the hours of work in connection with the drilling or the operation of oil and gas wells and any industrial undertaking included in the industry, the Board of Industrial Relations made an order which was approved by Order in Council and gazetted on July 15, 1937, to be effective on August 1, providing that male employees engaged in these industries might not work more than eight hours in a day or 48 in a week in the specified district. Exemption is permitted up to a maximum of 56 hours in a week in the case of a person employed as a driller on a crew or shift or tower or for an employee engaged in trucking or in transportation operations connected with the work of drilling oil or gas wells. Up to December 31, 1937, the weekly rest provision of the Act is declared not to apply to drillers working on shifts or crews.

A subsequent order published in *The Alberta Gazette* of August 14, 1937, and retroactive to August 1, 1937, makes the same provision for cat-head-men and derrick-men on crews or shifts as for drillers under the earlier order—a maximum of 56 hours a week with exemption from the weekly rest provisions of the Act.

This order is to be effective for a period of 90 days from the date of publication in *The Alberta Gazette.*

INTERIM REPORT OF NATIONAL EMPLOYMENT COMMISSION

Survey of Relief Situation and Recommendations

THE National Employment Commission, established by Order in Council in May, 1936 (Labour Gazette, July, 1936, page 601 and previous issues) has published, with the authority of the Minister of Labour, an interim report covering its activities during approximately the first year of its existence to the end of June, 1937.

From its inception, the Commission's surveys have been directed within five major categories, as required by the legislation, viz:—

I. Securing data in order to determine the nature and extent of the problem;

II. Formulation of recommendations regarding practical measures for increasing employment;

III. Formulation of recommendations regarding practical measures for ensuring efficiency and economy in the administration of aid;

IV. Formulation of recommendations for the setting up of machinery to carry out Commission policies approved by the government;

V. Formulation of long-range plans of national development for the purpose of ameliorating the effects of future depressions.

The Commission summarizes the progress made in connection with four of the above while the fifth is to be dealt with in a later report.

In a preface to its report the Commission points out that "both in the conduct of its studies and in the formulation of its recommendations, it has endeavoured to keep within the existing provisions of the British North America Act." It also recognized that "questions of jurisdiction as between the Dominion and the provinces may arise in the carrying out of its recommendations, particularly as most of its proposals were formulated prior to the Privy Council decisions handed down on January 28, 1937, and that action recommended to the Dominion Government may in some cases therefore be found to be beyond its powers."

But the Commission also emphasizes that "in the handling of the employment and aid problems, it is vital that policies should be co-ordinated on fundamentally sound lines" and urges "that all governmental bodies should immediately co-operate to overcome such difficulties of jurisdiction as may be found to exist."

The Commission is unanimous in its recommendations, which are extensive in their scope, including such matters as the registration of all persons in receipt of aid to which the Dominion Government contributes: transfer to national authority of the administration of the Employment Service; the treatment of homeless adults; housing policies; the organization and co-ordination of aid; and the training of workers.

Registration and Breakdown of Statistics

After briefly reviewing the economic background of the depression, the Commission deals with the first of its major duties—the securing of data in order to determine the nature and extent of the problem. It was decided that registration should be confined to those in receipt of public aid, and the report discusses the nature and purposes of this feature of its work as follows:

"Recognizing the very complex nature of the problem involved, the Commissions efforts under this section of its work have been predicated upon the demonstrated necessity of reversing the tendencies of recent years by breaking the problem down into all its component parts: this in order that remedial or alleviatory measures can be undertaken appropriate to each particular type of distress in question. Considerable difficulties have been met in this phase of the work, easy to understand when it is borne in mind that in the relief registration alone the co-operation of officials in all the Provinces and in over 1,800 local administrative units has been required. Much valuable data is now however becoming available, and it should gradually be possible to achieve a satisfactory running record of the facts underlying the situation, which record will become increasingly accurate as time goes on. In this connection it must be borne in mind that even in improved times it will be necessary to maintain a reliable record of all types of distressed persons to the assistance of whom the Dominion, the Provinces and the Municipalities contribute, if overlapping is to be avoided and the unintentional demoralization of individuals minimized."

As indicated in the report one of the first steps considered essential was to break down the aggregate number of aid recipients into those who are employable; those who are unemployable or of doubtful employability, or of non-worker type of dependent; and those who are farm resident operators and their dependents. It was also pointed out that it is only to the employable persons and their dependents that the term "Unemployment Aid" can be applied, while unemployable persons need assistance of a more permanent

character, and the aid given to farm resident operators and their dependents is again of a different category because of the kind of help required.

Tabular summaries give the results of the registration as at March, 1937, the latest month for which an accurate breakdown of the statistics was available at the time of publication. There was then a total of 1,208,902 persons of all ages to which aid was being given.

Employables.—Of this grand aggregate of nearly one million and a quarter on relief it was found that in March, 1937, slightly under 260,000 men and women (including heads of families and their dependents over 16 years of age) could be classed as fully employable persons in receipt of aid, and that two-thirds of these were in cities with a population of 25,000 and over. Respecting this total of employables the Commission estimates a decrease for June, 1937, "to something below 200,000." This estimate is based on preliminary provincial telegraphic reports to the Dominion Commissioner of Unemployment Relief. Commenting on this group and its significance as an employment factor, the report states:

"This is the essence of the current employment problem, in so far as those in receipt of relief are concerned, in that it gives the outside figure of those on relief who are really in the labour market and, to the extent that this group is placed, the problem of their non-working dependents automatically disappears. Even here, however, certain deductions are necessary.

"First: It must be borne in mind that this group includes not only those who previously were employed as wage-earners, but also those who were working 'on their own' in such occupations as fishing, hunting, trapping, shopkeeping, etc., most of whom are naturally not available for employment in the sense of wage-earning because of geographical location, lack of appropriate work-experience, etc.

"Second: There is reason to believe that an important number of persons of doubtful employability (for reasons of physical, mental or social handicap), is still included in these totals, especially in the large urban centres. As registration records become more precise the situation in this respect will become clearer."

Farm Resident Operators and Their Dependents.—Examining the problem as it concerns farm resident operators in receipt of agricultural aid, the report proceeds:

"These totalled in March, 1937, just under 70,000 heads of families and individual cases, who with their dependents represented (at 331,000) approximately 28 per cent of all those receiving so-called 'Unemployment Relief' to which the Dominion contributed at that date. These relief recipients are in no ordinary sense of the word 'unemployed,' but were in the position of awaiting the return of normal crop and crop selling price conditions. Bearing in mind the still further extent to which the 1937 prairie drought conditions will affect this situation (the registration indicates that even in March, 1937, 73 per cent of those receiving agricultural aid were in the Prairie Provinces and over two-thirds of this 73 per cent were in the recognized drought districts), it becomes increasingly evident that the problem here is one of subsistence allowances pending normal crop conditions, and/or re-settlement,—this as distinct from re-employment. As rehabilitation measures to meet these conditions are now handled by the Department of Agriculture, it is evident that those in this section should be dealt with on a different basis and eliminated from unemployment records, since the problem of aiding them has no direct bearing on the problem of re-employment. The separation of the two problems would bring about a better understanding of the underlying facts and therefore accelerate measures for taking care of the kinds of distress which are actually involved."

Unemployables.—Referring to this group, the report stated that in March, 1937, unemployables and those of doubtful employability were reported as numbering 58,261 and non-worker type dependents 560,402, making a further total of 618 663 not available for employment in any ordinary sense of the word.

The report then again draws attention to the fact that "out of a grand total of 1,208,902 persons of all ages receiving aid to which the Dominion contributed in March, 1937, 260,000 was an outside figure for those in the labour market."

Employers' Questionnaire.—In addition to the data obtained from registration of those in receipt of aid, considerable information was obtained from a questionnaire sent to employers (LABOUR GAZETTE, November, 1936, page 976). A supplementary report on this phase of the subject is being prepared by the Commission.

Measures for Increasing Employment

Dealing with the second of the five duties prescribed for the Commission—the formulation of recommendations regarding practical measures for increasing employment—the report details these under such headings as Home Improvement Plan, Farm Improvement and Employment Plan, Housing Construction, Plans to Increase Employability, Plans for Assisted

Land Settlement, Public Works. The first three of these have already been reviewed in the Labour Gazette in the issue for September, 1936, pages 785 to 788, and the progress of these plans have been noted in subsequent issues.)

The Interim Report gives the relevant detailed information concerning each. As regards its housing recommendations, the Commission observes that in making such it "was influenced by the fact that Canadian governmental bodies had expended some $14,000,000 in 1936 to rent accommodation for relief recipients, and that in many instances such accommodation was unsanitary and unsuitable in the extreme."

Plans to Increase Employability.—In outlining its plan to increase the degree of employability of those receiving aid, the Commission referred to its particular application to the youth section of the population and to the necessity of maintaining an adequate skilled labour group." Consequently it recommended to the Dominion government that a special sum be allocated to a "well-planned re-employment program," one-half of the appropriation to be devoted to youth measures. This was done (Labour Gazette, April, 1937, page 414), and a basis of youth training was framed (Labour Gazette, June, 1937, page 596).

The Interim Report does not cover the subsequent development of this program, but recently agreements for youth training in specific projects have been signed between the Dominion government and the governments of Manitoba (Labour Gazette, July, page 743) and Saskatchewan, Alberta and British Columbia (Labour Gazette, August, page 858) and now more recently with Ontario, and Nova Scotia (reviewed elsewhere in this issue).

Assisted Land Settlement.—With regard to plans for assisted land settlement, the Commission reported in part:

"A study of the problem in regard to farmers and settlers receiving 'unemployment aid' as disclosed by the Commission registration of relief recipients, indicated that, apart from the drought areas for which special consideration has already been arranged by the government, the bulk of the problem lies in the dependency created through direct unemployment relief having been accorded to families in the colonization areas, and during the off-season period in the tourist areas. The correction of this situation will depend in large measure on the policies which the Provinces in question wish to adopt to overcome the situation. The attention of the principal Provinces in question, i.e., Ontario and Quebec, has been called to the desirability of discussions with a view to formulating policies to meet the situation."

Public Works Programs.—On the many varied proposals submitted for extensions to public works programs, the Commission observed:

"With the rapid improvement taking place in employment conditions in private industry, the Commission decided to recommend that, *at this stage of the recovery,* not only should there be no expansion in public works programs, but that there should be a very substantial contraction in the total governmental expenditures for public works projects. It was felt that the further substantial growth anticipated in employment by private industry; the large railway equipment orders being placed this year; and the stimulation provided to the construction industry by the housing policy in so far as it already has been put into practical effect, fully justifies this recommendation. Further, that the restriction which would be placed upon the expansion of private industry by any important measure of government competition for the already diminishing supply of skilled workers should be avoided as far as possible.

"The Commission also recommended that where public works, originated for the purpose of providing employment, were nevertheless contemplated, they should be subjected to an evaluation both by the governmental departments involved and by the National Employment Commission, based on the following criteria:—

1. Importance in stimulating increased non-governmental expenditures;
2. Economic importance in improving the competitive position of industry, particularly of export industries;
3. Value in absorbing a high proportion of the type of labour available in the district in question, while at the same time making but slight demands on those types of labour of which a scarcity is becoming increasingly apparent;
4. Low operating costs and low permanent overhead charges (e.g., interest, etc.) in order to permit of economies for governmental units as conditions improve;
5. Social value to the community.

Responsibility for Aid

In the matter of obligation for relief of distress the Commission stated its position as follows:—

"As it is held that the division of authority under the British North America Act gives to Provincial governments exclusive jurisdiction in the field of civil rights, the prior obligation in meeting dependency rests primarily with the Province or, in turn, the Municipality. And while appreciating that changing condi-

tions in economic life; the limited taxation powers of local units of government; and the fact that Dominion policies affect local employment opportunities, have led to participation by the Dominion in meeting the cost of economic dependency, nevertheless the Commission strongly recommended that, as long as the present constitutional basis exists, the method introduced in 1934, of granting Aid on a temporary or emergency basis without definite or adequate control should be abandoned by the Dominion and the following basic principles accepted:—

1. That the primary responsibility for the relief of distress should remain with the Municipal authority and/or the Province;
2. That the Dominion should contribute thereto only when in its view it is shown that a practical necessity exists because of the *unusual* nature or extent of the distress;
3. That the Dominion should attach such conditions in the granting of such Aid as it deems necessary and proper with due regard to—
   (*a*) careful co-ordination of effort, and
   (*b*) supervision through the designation of a proper Dominion authority."

The Commission emphasized that in the handling of aid distribution "great care should be taken to provide such aid as is given under its proper name," and it again indicates what it considers to be the proper break down of the statistics as already stated in this review.

It also listed its recommended conditions under which "grants-in-aid" agreements with the provinces should be negotiated.

Nationally Administered Employment Service

The Commission recommended a nationally administered employment service and states the reasons for such as follows:—

"Early in the Commission's investigations it became evident that the first and most vital step necessary to the successful handling of employment, re-employment and Aid administration problems is the development of more efficient Employment Services throughout Canada. The present Provincial Employment Services are in practice unfitted to meet the exigencies of the situation. Divided responsibilities and diversity of aims between different Provinces; unequal development as regards numbers, types and functions of local offices; unsuitable locations of premises; defects in Provincial boundaries when used as economic administrative units, etc., have all tended to result in the Provincial Employment Services not being utilized fully either by employer or by employee.

"The provision of a proper link between employer and employee; of local advisory councils supplementary to local Employment Service offices in order to provide focal points for attacks on local problems; of means for gauging the relative degree of employability of those in receipt of Aid, are of pre-eminent importance if any real progress is to be achieved in handling unemployment problems. Indeed this is the experience of other countries also.

"Bearing in mind the desirability of uniformity of practice where financial Aid for the Dominion is in question; of freedom from local pressure in administration; of a Dominion source of local information independent of Province or Municipality in respect to unemployment assistance, etc., the Commission recommended in August, 1936, that the Employment Service be administered nationally. In any case the situation requires increased and improved service which will cost more, but it is recognized that national administration in itself would not add anything to the total cost to the country as a whole. The Commission, however, believes the extra cost to the Dominion Government of the transfer from the Provinces would be more than offset by efficiencies and, therefore, economies which would result."

Conclusions

In its conclusions the report summarized the immediate situation and future requirements as follows:—

Employment conditions have shown a very material improvement during the period of the Commission's activities. The employment index, issued by the Dominion Bureau of Statistics, covering the group of individual employers having fifteen or more employees each (representing, it is estimated, nearly half of all wage-earning employees in Canada) has risen from 104·6 per cent on July 1, 1936, (1926=100) to 119·1 per cent at the end of June 1937. Unemployment in trade unions reporting has fallen from 13·9 per cent to 10·4 per cent in the same period. Even allowing for growth in population and for the drift into wage-earning industry of those previously working on their own, this gives evidence of the marked way in which the employable unemployed are being absorbed into industry. There are evidences of further improvement ahead, and there are probabilities of a shortage in the supply of skilled workers in many centres in the relatively early future, should the improvement continue.

"The decline in those on the relief rolls is less striking but appreciable, the total reduction from June, 1936, to June, 1937, being estimated at 12·75 per cent or, excluding the drought areas, 19·5 per cent. The lesser improvement in this index is in part due to the fact that many of the unemployed who have in the period named found their way back into industry had without doubt managed to avoid going 'on relief', in part also to the fact that the relief lists include large numbers of persons who are in no real sense of the word "employable."

"The National Employment Commission reiterates the extreme importance it attaches to early action along four particular lines:—

1. *Continued Registration of All Persons in Receipt of Aid.*
   Improved conditions should not be allowed to interfere with the obtaining of an accurate running record of the circumstances of all those receiving Aid.
2. *Improvement in Efficiencies of the Employment Service of Canada.*
   It is the Commission's conviction that prompt progress in this field is a prerequisite of success in the handling of re-employment problems and in securing reliable local information and efficient control in the administration of Aid.
3. *The Establishment of Demonstrated Need as a Basis for Grants-in-Aid by the Dominion to the Provinces; by the Provinces to the Municipalities; and by the Municipalities to the Recipients of Aid.*
   Emphasis is laid upon the necessity of a return to the original basis whereby Dominion Aid to the Provinces is restricted to cases where an abnormal unemployment burden is in question. Further, that before such grants are accorded—
   (*a*) Financial necessity of the Province in so far as the Dominion is concerned, and of the Municipality in so far as the Province is concerned, shall have been proved:
   (*b*) All applications shall be accompanied by estimates of costs of the different kinds of need for which Aid is being granted in all Municipal and territorial units;
   (*c*) Administrative practices shall be acceptable;
   (*d*) Standards of Aid shall be acceptable;
   (*e*) Co-operation shall be guaranteed to the Dominion in carrying out registration, pre-audit and other essential investigations.
   The same principle, i.e., the proof of need, should carry through to the conditions made by Provinces to Municipalities, and by Municipalities to Aid recipients.
4. *The Provision of an Adequate Appropriation to be Used as a Nucleus for Developing Local Training, Reconditioning and Rehabilitation Projects.*
   Without comprehensive action along this line the Commission considers no national economy commensurate with what it considers should result from improved economic conditions can be expected in the nation's financial relief burden."

A limited number of copies of this report are obtainable from the National Employment Commission, Ottawa.

Ontario Regulations for Hairdresser Schools

The Ontario Industry and Labour Board has issued regulations approved by Order in Council on August 23 and effective September 1 governing hairdresser schools. The orders are made under the authority of the Apprenticeship Act and lay down the conditions under which establishments, other than hairdressing shops training only apprentices or schools under the Ontario Department of Education, may operate under licences granted by the Industry and Labour Board. The regulations deal with the hours for instruction, charges made to customers and the sanitary conditions that must be maintained in the establishment. When a student has completed the period of training in the school, he is required to submit to an examination by the Board of Examiners appointed under the Apprenticeship Act.

Dwelling Units in Urban Areas of U.S.A.

There were 118,597 dwelling units provided in new dwellings in the entire urban area of the United States during the first half of 1937, according to estimates of the Bureau of Labour Statistics, Secretary of Labour Frances Perkins announced to-day. "This is an increase of more than 33,000 units or 39 per cent as compared with the corresponding period of 1936," Miss Perkins said. "These estimates are based on reports received by the Bureau of Labour Statistics from more than 1,500 cities having a population of approximately 59,0000,000 or 85 per cent of the entire urban population, according to the 1930 census. The urban area of the United States, as defined by the Census Bureau, consists of 3,165 cities with an aggregate population in 1930 of 68,955,000.

YOUTH TRAINING IN ONTARIO AND NOVA SCOTIA

Projects provided in Dominion-Provincial Agreements

DURING the past month youth training agreements have been negotiated between the Dominion Government and the Provincial Governments of Ontario and Nova Scotia. There are now six Dominion-provincial agreements operating in accordance with the appropriation of $1,000,000 voted for this purpose by the Dominion Parliament at its last session (LABOUR GAZETTE, April, page 414). Recently the four western provinces signed agreements with the Dominion providing for specific training programs (LABOUR GAZETTE, July, page 743 and August, page 858).

Ontario Youth Training

The agreement with Ontario provides for a joint expenditure by the Dominion and Provincial Governments on a 50-50 basis of approximately half a million dollars with the province paying costs of administration. Proposals submitted by the province absorb the whole of this amount, and the agreement expires with the close of the fiscal year on March 31, 1938.

Among the projects which have been approved after examination by the National Employment Commission are:—

1. *Forest conservation work* to provide a practical course in forestry on the provincial forest reserves for approximately 350 young men with class instruction in related subjects.

2. *Technical Training in Mining* to be given in the technical schools of Northern Ontario to a selected group of 50; designed to fit them for positions in the mining industry. Instruction will be given in mine surveying, drafting, assaying, mineralogy and other subjects for a period of about 6 months.

3. *Rural training,* providing practical courses in subjects related to agriculture for young men. These courses will be established in various parts of the province under the direction of the Provincial Department of Agriculture. There will also be courses for rural young women in homecraft, household economics and other suitable subjects. Through the provincial agricultural representatives provision is being made to give 500 young men training in farm work by placing them with carefully selected farmers throughout the province who agree to furnish adequate training and instruction in farming. This is not only a farm placement plan but is designed to train young men to follow agricultural pursuits.

4. *Industrial apprenticeship and learnership* To help train young men or women in skilled or semi-skilled employment by paying the cost of their instruction either in special classes in technical schools or in periods of instruction in the shop or factory. This cost may include: (1) the actual cost of the tuition given; (2) travelling expenses for those who have to attend classes away from their home; (3) payment to the young people of an allowance in lieu of wages while attending classes or undergoing instruction on the job or in the shop or factory. In the case of learners at least 60 per cent of the combined wage and instruction allowance must be paid by the employer. This project will be promoted by a staff of specially appointed and qualified officers to canvass employers of the province, and is under the direction of the Provincial Department of Labour.

5. *Women's Specialized Training.* Schools for training household workers will be established in some of the larger cities of the province with a qualified staff in charge, and under the supervision of an honorary committee of women representing local organizations. The schools may be operated on a residential basis, and will provide a three months' course with a placement and follow-up service. Provision is also made for training in other forms of specialized services suitable for women.

6. *Urban Technical Occupational Training.* To provide courses of practical training in the technical schools and elsewhere to help young people fit themselves for employment opportunities in the area. Some of these courses will be used in connection with the apprenticeship and learnership project.

These projects are open to unemployed young men and women between the ages of 18 and 30 with the selection made by the province without discrimination or favour in relation to their social origin, religious views or political affiliations. Provision is made for vocational guidance by qualified officers before entering on a course of training to ensure that the training and subsequent employment shall be in accordance with the individuals aptitude. Living allowances may also be paid in necessitous cases to enable the applicant to attend a course away from home. Whenever possible, instruction will be given in physical education and health, and provision made for recreational activities. Special stress is laid on placement in employment on completion of the training given and special machinery is set up to promote this feature. The various projects under this agreement will afford opportunities to at least 5,000 unemployed young people.

Nova Scotia Youth Training

The first Youth Training Agreement with any of the provinces in Eastern Canada was announced by Honourable Norman McL. Rogers, federal Minister of Labour, following Dominion approval of projects submitted by the Government of Nova Scotia and examined by the National Employment Commission.

As in Youth Training Agreements with the other provinces, the projects are open to young unemployed persons between the ages of 18 and 30, and the total expenditure proposed, amounting to over $100,000, will be shared by the Dominion and Provincial Governments with the latter bearing its own administrative costs.

The projects proposed are:—

Household Training.—The establishment in Halifax and elsewhere, at the discretion of the province, of training schools for young women in household work. Each school will be under the supervision of an honorary committee of women interested in the project and representing local organizations of women. Each course will last for approximately three months and will include such subjects as will fit those attending, for various forms of household work. Each school will conduct a special placement and follow-up service for the benefit of those who successfully complete their training.

Mine Apprentice Training.—Which will provide a practical course not exceeding 12 months' duration in hard rock mining for about 300 young men. This project which has been under way since April is unique in many respects. A privately owned gold mine at Chester Basin was made available to the Provincial Government without cost. Under the direction of competent mining supervisors and experienced hard rock miners, those undergoing training will carry on regular operations in the mine which is equipped with a machine shop, mill, change house, showers, etc. The young men will be rotated in the different operations to ascertain for which branch of mining, surface or underground, they are most suitable. Their board and lodging are provided free as are working clothes and equipment. A training wage is paid which is increased at intervals. Technical class instruction is given by qualified personnel and provision is made for sports and other recreational activities. Prior to enrolment each applicant is given a thorough medical examination with X-rays to ensure that he is physically fit for mining operations. A special placement service has been set up to assist in placing those who satisfactorily complete their training, in various mines throughout the country. All mineral recovery during the term of the agreement will be used to help defray the gross cost of the project.

These two projects take up nearly all the Dominion allocation but other projects are being developed by the province for the balance.

The agreements now completed with six of the provinces, involve about two-thirds of the Dominion appropriation.

Accident Prevention and Public Health

"A Philosophy of Accident Prevention" is the title of an article prepared by Dr. N. Burnette, Chairman, Accident Prevention Committee, Canadian Public Health Association.

Dr. Burnette's article deals with the alarming increase in the number of motor accidents in Canada and United States. "For the first five months of this year," he says "the total for traffic deaths in the United States was 17 per cent greater than for the same period of 1936. While Canadian figures are not yet available there is no reason to hope that the record is any better.

"Five factors" the author states "cause motor accidents—road conditions, ineffectual traffic control systems, violation of the law, the car, and the actions of the driver. In the first three matters there is evidence that those responsible are at least headed in the direction of ultimate satisfactory solutions. . . Can the same be said of variations of human behaviour as a contributing cause in automobile accidents? Unfortunately the answer is 'No' and herein lies the obstacle to progress in reducing the accident toll by present methods."

The writer of the article then discusses the effectiveness of the recent attempt at safety education. Referring to the "fear" type of safety education Dr. Burnette says "it is psychologically unsound. What the protagonists of this method do not understand is that it appeals to a sadistic tendency which is widespread in mankind; or to the closely allied basic reasons for seeing the funny side of other people's troubles."

Dr. Burnette then discusses the relationship of Public Health to the Safety Movement and summing up states "Public Health has no reason to feel diffident about asking for a seat at the council tables of the Safety Movement. Unsafe driving is as much the concern of a health officer as unsafe milk or an unsafe water supply. There is no logic in one group saving person from death—from disease; another group striving to prevent the same individuals being killed on the highway; and no pooling of knowledge for the common purpose of conserving life. It is in the public interest that there should be an alliance between those who sincerely desire to protect our citizens against one specific hazard, and those who have already achieved success in many and varied battles with death and suffering."

MINIMUM WAGES IN SASKATCHEWAN, MANITOBA, BRITISH COLUMBIA AND ALBERTA

Recent Orders of Provincial Boards

Saskatchewan

FOUR new Minimum Wage Orders, effective August 18, 1937, made by the Saskatchewan Minimum Wage Board were published in the LABOUR GAZETTE for August. These orders replace and make important changes in the four orders effective on November 16, 1936, and given in the LABOUR GAZETTE for November, 1936 (pages 999-1002). A fifth order issued also last October applied to barber shops and beauty parlours but did not go into force until January 1, 1937. This order remains in effect.

In gazetting the wage orders, the Board also made orders declaring the Minimum Wage Act to apply to male employees in any establishments covered by the Act in cities or within a five-mile radius of any city in the province. Further, it was ordered that the provisions of the Act are to apply to any building or portion of a building, booth, stall, or place in which warehousing, wholesaling, draying, carting or delivering are carried on and to bowling alleys, dance halls, skating and curling rinks, theatres and billiard halls. This last extension was provided for in an amendment to the Act made during the last session of the Legislature and the minimum wage order applying to shops includes also warehouses and wholesale houses. No order has yet been issued covering places of amusement.

The 1936 orders, which are now amended, were made after the extension of the Act to male workers and the limitation placed by all previous Minimum Wage Orders on hours of labour worked by women and girls employed in shops and in hotels and restaurants was repealed and not reproduced in later orders except that in shops no person may be employed for more than 56 hours in a week without a permit from the secretary of the Minimum Wage Board. Prior to 1936, working hours of female employees in shops were limited by the Minimum Wage Order to 49 or 51 according to the size of the city, and in hotels and restaurants to 49 a week except with a permit. The Saskatchewan Factories Act, however, provides for a 48-hour week for women and young persons in factories, including laundries and dry cleaning establishments and fur shops, millinery and dressmaking establishments. A 48-hour week was stipulated in the earlier order governing female workers in beauty parlours and barber shops. With the extension of the Act to male employees, the order of October, 1936, increased the maximum number of working hours to 57 in a week.

The four new orders apply to shops; laundries, dye-works, tailoring, fur sewing, dressmaking and millinery establishments; factories, garages and automobile service stations; hotels, restaurants and refreshment rooms. Drug clerks and apprentices and errand boys from shops are now included in the shops order, the latter at a minimum rate of $8 a week. Bell boys, elevator operators and porters formerly excluded are now covered by the order governing hotels. The minimum wage applying to them, when experienced, as to dish washers, is fixed at $10 per week or 21 cents an hour. This compares with $12 a week or 25 cents an hour for other classes of experienced help in hotels and restaurants.

Certain changes have been made in all four orders. Employees are now divided into two classes, experienced and inexperienced. Formerly, the inexperienced were classified by age, over and under 21, and different wage-rates applied. No change has been made in the minimum rate for experienced workers in any of these classes, and the rate applies to a 48-hour week or to the normal working week if less than 48 but it now applies to all working for more than 43 hours in a week in shops or laundries and other places included in these two orders. This provision is designed to prevent evasion of the minimum wage by hiring workers for a few hours less than the 48 to which the minimum wage formerly applied.

The minimum rates for experienced workers are $14 for shops, $13 for laundries and other places in this order, $12 for factories, etc., and $12 for hotels, etc. But with the re-classification of inexperienced workers, those under 21 will receive slightly more than they would have done under the old order, except in shops, and those over 21 will receive two or three dollars less (one dollar less in hotels).

Part-time workers, who are those employed for less than 43 hours, may not be paid for less than three hours in shops. Under the other orders the minimum time to be paid for remains at two hours but, with the abandonment of the class of inexperienced workers under 21 whose hourly overtime and part-time rate was 20 cents, the minimum hourly rates for time worked in excess of 48 hours or for fewer hours than 43, except in shops, are 30 cents for experienced workers and 25 cents

for inexperienced workers. In shops, overtime and part-time are to be paid *pro rata* but in no case is the hourly rate for less than 43 hours' work to be less than 20 cents.

A new provision in these orders, except that applying to factories, restricts the number of part-time workers that may be employed to 25% of the total number of workers regularly employed. On the other hand, the proportion of inexperienced workers that may be employed is raised from 25% to 33⅓% of the total number of employees in the same class of employment. The repealed order governing hotels and restaurants, however, imposed no restriction of this kind but the new regulation limits inexperienced workers to 25% as in other classes of employment.

Any uniform required by the employer to be worn in hotels or restaurants had to be supplied without cost to the employee. Under the new order, fifty cents a week must be added to the wages paid to any worker required to wear a uniform, other than white, which is not supplied by the employer.

Manitoba

In Manitoba, a new minimum wage order to come into effect on September 15, 1937, governs the employment of both males and females in retail and wholesale stores, including the work of delivering merchandise, throughout the province. Department stores and mail order houses are excluded. The old Order issued in December, 1931, applying to female workers and boys under 18 in these establishments is repealed.

The new Order No. 3 provides for the same minimum wage of $12 a week for experienced workers in cities and at summer resorts from June to September as in the old Order but workers in rural districts may now be paid $2 less per week. The same differential applies to the new rates for inexperienced workers. Further, the minimum rate for inexperienced employees in cities is lowered from $9 for the first four months to $8, increasing by $1 every four months. The learning period is thus made longer by four months than under the repealed regulation but the lower rates, $8 for the first six months, then $9 and $10 after a year, applicable to boys under 18 years of age, have been omitted from the new Order.

Part-time workers, if working for 16 hours a week or less, are to be paid at the rate for experienced workers; if working for more than 16 hours at the rate for inexperienced workers "depending on the experience gained, based on the total time worked". No person may be paid for less than four hours on each occasion they are required to report for duty and, as before, employees required to wait on the premises must be paid for the time so spent.

Changes are made in the regulations governing hours. Formerly, women could not be employed for more than 48 hours a week, 9 in a day or 11½ on Saturday except on a maximum of 30 days in the year when not more than 3 hours a day or 6 hours in one week could be worked. Further exemption was provided for the period from December 15 to 24 and for "exhibition weeks", when 9 hours overtime could be put in. Wages for overtime were to be paid *pro rata*. Under Order No. 3, the basic week is to be 48 hours and all time worked by any employee in excess of 48, or of 9 a day or 10½ on Saturday is to be regarded as overtime and paid for at not less than five cents an hour more than the minimum rate.

No person under 18 may be required to work overtime. Women may not be employed overtime on more than 36 days in the year and the time is limited as before to 3 hours a day or 6 hours a week unless a permit has been obtained from the Bureau of Labour. A maximum of 9 hours a day from December 15 to 24 is permitted, however. Men over 18 may not be required to work overtime in excess of 6 hours a week without a permit except during December when an extra 9 hours may be worked. The limit of 36 days does not apply to adult males.

It is stipulated that where an indenture of apprenticeship has been entered into for not less than one year and for not more than two and has been approved by the Minimum Wage Board, the wages specified in the indenture may supersede the rates fixed in the Order.

No deduction from the minimum wage is permitted for any statutory holiday and such holidays are enumerated in the new Order—New Year's Day, Good Friday, Empire Day, Dominion Day, Civic Holiday, Labour Day, Thanksgiving Day, Christmas and Boxing Day.

The conditions laid down as to sanitation, ventilation, lighting, washing facilities and seats for employees are similar to those in the former Order.

British Columbia

ORDER NO. 48.—*Construction Industry*

The LABOUR GAZETTE for July (page 752) contained the text of Order No. 45 establishing a new minimum wage in the construction industy in British Columbia. In explanation of the Order, it was stated that it replaced two former Orders—No. 12 and No. 40. Order No. 12 (LABOUR GAZETTE, October, 1934, page 913) which was in effect from September 28, 1934, established a minimum wage rate for the construction industry of 45 cents and 40 cents per hour in urban and rural districts, respectively. By Order No. 40 (LABOUR GAZETTE, January, 1937, page 24) the British Columbia Board of Industrial Relations established a minimum wage for carpenters of 70 cents per hour in the Victoria zone. Both these orders remained in effect until July 5, when they were rescinded by Order No. 45 which broadened the definition of construction industry including carpentry and other skilled trades for which it established a minimum wage of 75 cents per hour. It also fixed a minimum wage for common labourers according to specified age groups and localities. But before the effective date (July 5) of Order No. 45 its operation was cancelled by Order No. 45A (LABOUR GAZETTE, August, page 870). It was reported that Order No. 45 was cancelled to permit a study of its effect on contracts made prior to its promulgation, and also its effect on maintenance men in the construction industry.

Subsequently, by Order No. 48 in the *British Columbia Gazette* of July 29, it was announced that both Order No. 12 and Order No. 40 were revived, and that Order No. 45 was rescinded. The effect of this last Order (No. 48) is that the special minimum wage of 75 cents per hour for skilled artisans in the construction industry (as established by Order No. 45) is now repealed by the Board of Industrial Relations. Instead, the industry will again be covered by the former minimum rate of 45 and 40 cents per hour as provided in Order No. 12 while the rate for carpenters in the Victoria zone will revert to the minimum wage of 70 cents per hour as formerly established in Order No. 40.

According to a press report, it was stated that minimum wage for skilled trades as provided in Order No. 45, "did not work out well in practice."

ORDER NO. 49.—*Establishing a Minimum Wage in the Woodworking Industry*

Effective August 16, the Board of Industrial Relations has issued Order No. 49, in substitution for Order No. 35 of March 23, 1936, fixing minimum wages in the wood-working industry. The new Order provides an increase of five cents per hour for adult males in the industry, the former rate being 40 cents. It also sets a percentage limit of the number of employees (under eighteen years) carried on the payroll at less than 40 cents per hour.

The main provisions of the new Order are as follows:—

1. That where used in this Order the expression "wood-working industry" includes all operations in establishments operated for the purpose of manufacturing sash and doors, cabinets, show-cases, office and store fixtures, wood furniture, wood furnishings, veneer products, and general mill-work products.

2. That the minimum wage for every employee twenty-one (21) years of age or over in the wood-working industry (not included in any other Order of the Board) shall be not less than the sum of forty cents (40c.) per hour.

3. That the minimum wage for every employee over the age of eighteen (18) and under the age of twenty-one (21) years in the wood-working industry (not included in any other Order of the Board) shall be not less than the sum of thirty cents (30c.) per hour.

4. That the minimum wage for every employee under the age of eighteen (18) years in the wood-working industry (not included in any other Order of the Board) shall be not less than the sum of twenty-five cents (25c.) per hour.

5. That on and after November 15, 1937, the total number of male employees receiving less than forty cents (40c.) per hour, employed in any plant or establishment in the wood-working industry, shall not exceed thirty-three and one-third per centum (33⅓%) of the whole number of male employees in that plant or establishment.

6. That this Order shall not apply to apprentices who are duly indentured pursuant to the provisions of the "Apprenticeship Act," being chapter 12 of the "Revised Statutes of British Columbia, 1936."

ORDER NO. 50.—*Establishing a Minimum Wage in the Sawmill Industry*

This Order, also effective on August 16, rescinds Order No. 36 governing minimum wages in the sawmill industry. The new Order provides for an increase of 5 cents per hour in the rates of all employees in the industry. Its main provisions are:—

1. That where used in this Order the expression "sawmill industry" includes all operations in or incidental to the carrying-on of sawmills and (or) planing-mills.

2. That the minimum wage for every employee in the sawmill industry (not included in any other Order of the Board) shall be not less than the sum of forty cents (40c.) per hour, with the exceptions provided by sections 3 and 4 hereof.

3. That, provided when (but not until) an employer has paid ninety per centum (90%) of his employees in the sawmill industry at a rate or rates not less than the rate fixed by section 2 hereof, he may then pay the other or others of his employees (inclusive of em-

ployees in respect of whom a permit has been obtained under section 6 of the Act) at a lesser rate or rates, but in no case shall such lesser rate or rates be less than thirty cents (30c.) per hour.

4. That the minimum wage for every employee under the age of twenty-one (21) years in the sawmill industry (not included in any other Order of the Board) shall be not less than the sum of thirty cents (30c.) per hour.

5. That this Order shall not apply to apprentices who are duly indentured pursuant to the provisions of the "Apprenticeship Act," being chapter 12 of the "Revised Statutes of British Columbia, 1936."

Order No. 46A and 47A.—*Respecting female and male employees, respectively, in the fruit and vegetable industry.*

The effect of these orders is to make Orders Nos. 46 and 47 (Labour Gazette, August, page 869) non-applicable to women and to men "employed in canneries while working on tomatoes during the period from September 2, 1937, to September 15, 1937, both dates inclusive".

Order No. 33A.—*Taxi-cab drivers*

This order amends Order No. 33 (Labour Gazette, March, 1936, page 237) by increasing the minimum wage of taxi-cab drivers from $2.50 to $2.75, effective September 13, 1937.

Alberta

In The Labour Gazette, July, 1937, p. 753 was quoted an order of the Alberta Board of Industrial Relations stipulating that until orders are made by the Board fixing minimum wages for male workers, no such workers shall be employed in any class of employment for which a minimum wage has been established for female workers at a lower wage than that fixed for women and that overtime permitted under the Hours of Work Act shall be paid for at the rate of time and a half. The order included a clause stating that the penalty for paying wages below the minimum was a maximum fine of $500. This last clause has now been rescinded by an order approved by Order in Council of August 26, 1937. Since the Male Minimum Wage Act fixes a similar penalty for a first offence, it appears to have been unnecessary to provide for this in the Board's earlier order.

INDUSTRIAL HYGIENE IN ONTARIO 1936

INCLUDED in the annual report of the Ontario Department of Health, published recently, is a review of the activities of the Division of Industrial Hygiene by its director, Dr. J. Grant Cunningham.

Dealing with the subject of medical care, Dr. Cunningham stated that a number of inquiries had been received by industrial executives respecting plans for employes, and expressed himself as follows:

"Such arrangements based on industrial groups increase the opportunity for the application of preventive measures. However, it should be recognized that the wage-earning section of the population while interested in both sides of the subject has been more interested in a small assured income during sickness than in insurance coverage for medical care. It is for this purpose that employee contributions are primarily made. Immediate considerations loom largest, so that it is only after income during sickness and treatment of sickness are covered that prevention can receive much consideration. For some time to come it may be expected that such preventive work as can be accomplished must be initiated and largely carried through by industry or the state or both.

"The work of this division is intended to stimulate the interest and activity of industry to organize preventive work and assist in its accomplishment, with particular emphasis on the diseases directly associated with industrial work."

Tuberculosis—the Dust Hazard.—The director reported that tuberculosis incidence is higher in the wage-earning population than elsewhere since frequent contact in industry and commerce may be expected to favour its spread although to a much less extent than is the case at home.

Reporting on conditions in certain Ontario factories the director states:—

"Following the detection of a high incidence of tuberculosis cases in certain factories in Ontario last year, there were examined this year three hundred and five employees in two boot and shoe plants. There were four cases of active tuberculosis among them, with certain others in whom continued observation was desirable. This is not a high incidence, although some of them were at work in as close proximity to one another as was the case in rubber shoe plants investigated previously". . .

"Certain dust exposures in industry contribute to the amount of tuberculosis. In about five hundred workmen exposed to silica dust and examined for survey purposes was one group of one hundred and thirty-eight workmen in one foundry in which there were detected seven cases of active tuberculosis—two with positive sputum. In the follow-up by the plant physician in the next nine months five of them returned positive sputum tests. One or two of these men had silicosis. Nothing could emphasize more clearly the importance of periodic examination of workers exposed to silica dust. It ensures that those with tuberculosis are placed under treatment as

early as possible, and, at the same time, avoids exposure of other workmen to the disease. Most of those with silicosis not complicated with tuberculosis should be allowed to continue in work with which they are familiar. Legislation in the Ontario Mining Act requires these examinations for miners. They have been recommended for workers in certain other silica processes, but have been adopted without legislation in twenty-four plants. Nearly four hundred cases were reviewed and chest X-ray interpretations given for industries now conducting periodic examinations of workers in dusty trades. The Silicosis Reference Board examined and reported on ninety-nine claimants referred by the Workmen's Compensation Board for diagnosis as to the presence of silicosis or silicosis and tuberculosis."

Other extracts from the director's report dealing with tuberculosis and dust were as follows:—

"Upon the request of the Brotherhood of Boilermakers, Welders and Helpers, inquiry was made into the health of workers engaged in acetylene and electric welding. Sixty-four men were examined with particular attention to the eyes and chest. No evidence of effects from chromium, nickel or manganese, which might be volatilized as constituents of welding rods, was noted" . . . .

"The control of silica dust has involved detailed examination and recommendations for improvements in eight porcelain manufacturing plants. Definite progress has been made in some of these. Apart from the handling of raw materials, the clay body has varied in free silica content from twenty to thirty per cent" . . . . (The average dust count at various operations in these plants was indicated in a table.)

"Additional detailed inquiry has been made in certain foundries directed particularly to testing methods for the control of dust in operations like sand slingers, mechanized shake-out and sand recovery. In a survey of one hundred foundries there were fifteen out of four hundred and seventy-five solid type tumbling mills and thirty-six out of one hundred and ninety stationary grind wheels, not ventilated. There is a gratifying increase in the number of foundries using steel shot or grit rather than sand abrasive. Most foundries are using parting sand with silica absent, or present only in small amounts. House-cleaning has improved materially but some types of equipment have received less attention than is necessary."

Other phases of the director's report deals with lead-poisoning, benzol-poisoning, medical care and sanitation in unorganized territory, and cancer control.

LABOUR LEGISLATION IN THE YUKON TERRITORY AND PRINCE EDWARD ISLAND, 1937

An Ordinance to regulate the Hours of Labour and the Minimum Wage to be paid in Mining Operations was passed during the recent session of the Yukon Council and will come into force on April 1, 1938.

The new Ordinance which repeals the Ordinances regulating Hours of Labour in underground quartz or lode mining and in placer mining which were passed in 1921 and 1929 respectively, applies to all mining operations employing more than two men. It does not apply to persons employed by the month or holding supervisory or managerial positions or to those employed in kitchens, mess houses, bunk houses or sleeping quarters. Working hours are limited to eight per day and fifty-six per week except that at change of shift work may be continued for the period necessary to make the change. The minimum wage is fixed at 50 cents per hour. Employees who are not working underground in a shaft or tunnel may work overtime provided that they are paid not less than 55 cents per hour. In addition to paying the minimum wage the employer must furnish proper board and lodging for his employees as part of their remuneration or must make an additional payment of $2 per day. Contracts or agreements to waive the provisions of the Ordinance are null and void.

Every employer must keep a record of wages and hours together with a register of the names, ages, nationalities and addresses of his employees and must produce them for inspection on demand of any authorized person. An employee paid less than the minimum wage may recover the difference in a civil action. An owner, employer, agent or manager, or any person acting on his behalf, who employs a workman in contravention of the Ordinance is liable to a penalty ranging from $20 to $100 for each workman so employed. An employee who works for longer hours or lower wages than provided by the Ordinance is liable to a fine of $20 to $100.

An amendment to the Miners' Lien Ordinance invalidates any agreement by a person having a lien to waive his rights under the Ordinance.

Prince Edward Island

The Prince Edward Island Legislature, which was in session from March 22 to April 16, 1937, amended the Old Age Pensions Act to enable the granting of pensions to the blind at an earlier age than that at which they are granted to other persons.

EMPLOYEES DISABILITY WAGE PLAN OF CANADIAN INDUSTRIES LIMITED

IN the Labour Gazette for August 1936, page 705, the various industrial relations plans of Canadian Industries Limited were reviewed. The review summarized the operation of the employee representation, pensions, co-operative savings and co-operative sickness and accident insurance plans, the company's plans providing for annual vacations with pay, employees death benefit, bonuses for outstanding service, stock investment privileges and services awards.

Recently, Canadian Industries Limited has introduced a new "Disability Wage Plan for Payroll Employees". According to a statement issued by the company, the purpose of this plan, which came into effect on August 23, is to protect eligible payroll employees against total loss of earnings during periods of disability due to sickness or a non-occupational accident by the payment of wages, and to afford them equal protection during periods of disability due to an occupational accident or disease for which compensation is granted under the Workmen's Compensation Act by the payment of the difference between the wages specified in the former case and the amount of compensation paid.

Eligibility.—Any payroll employee whether paid by the hour, day, week or month, who has completed one year of continuous service in accordance with the Company's Continuity of Service Rules is eligible to receive payments under the plan.

Wages During Disability.—In non-occupational disability cases, subject to a specified waiting period and other provisions of the plan, full wages are paid for a maximum period of 13 weeks or a combination of full and partial wages for the same total maximum amount in accordance with certain optional methods of payment.

In occupational disability cases, the plan provides for the payment of the difference between full wages and the compensation granted under a Workmen's Compensation Act for a maximum period of 13 weeks. Payments are to commence on the basis of the estimate submitted with the claim, and are to be adjusted later, if necessary in accordance with the amount of compensation granted. If a claim is disallowed, the case will be treated as one of non-occupational disability, payments being adjusted in accordance with the provisions applying to that group of cases.

Optional Methods of Payment.—An employee whose disability is classified as non-occupational may choose, on medical advice not later than the ninth week of disability (eighth week of payment) to receive in lieu of full wages for the remaining period of five weeks, subsequent payments of either one-half wages for a maximum period of 10 weeks, or one-third wages for a maximum period of 15 weeks. In the event of an employee who chooses one of the options, returning to work before or after the 13 weeks have elapsed provision is made in the plan for the adjustment of payments made to him.

Waiting Period.—The plan provides for a waiting period of seven consecutive days before payments begin. This applies in each separate—and distinct case of disability—with the exception that, if a new disability occurs before payment in respect to another disability has ceased, the requirement of a waiting period in respect of the new disability is waived.

Relapsed, Recurrent and Recovered Disabilities.—The plan also provides that if an employee returns to work prior to complete recovery and finds it necessary to cease work again because of a medically certified relapse, the second absence will be treated as a continuation of the first, and provided the maximum amount of 13 weeks' full wages has not been paid during the first absence, payment will recommence as of the first day of the second absence. In no case, however, will disability wages be paid for an amount in excess of 13 weeks' full wages for the two or more periods of absence involved.

Provision is made that recurring chronic disabling conditions such as rheumatism, varicose veins and heart disorders will be treated as separate and distinct cases of disability in each instance of recurrence.

In the case of such common ailments as colds, bronchitis and influenza, if a complete recovery has been effected, a recurrence of the same disability will be considered as a separate and distinct case.

Calculation of Full Wages.—For the purpose of the plan full wages of an employee paid by the hour will be computed at his hourly rate as established for the C.I.L. Welfare Plan, multiplied by the standard works hours that have elapsed during the period for which payment is being made. If the employee is paid by the day, week or month, his regular daily, weekly or monthly rate, respectively, will be used in computing the amount of the payment to be made.

Evidence of Disability.—In the case of absence on account of sickness or a non-occupational accident, the employee shall furnish satisfactory medical evidence of his inability to work, and he shall be responsible for securing the prescribed form and returning it to the Company.

An employee absent on account of an occupational accident or disease for which compensation is claimed under a workmen's compensation act is not required to submit evidence of disability, unless the claim is later disallowed, when the case becomes one of non-occupational disability.

The Company reserves the right in every case to require such medical forms as it may consider necessary, and to have the employee submit to a medical examination by any doctor it may name.

Employees are expected to co-operate wholeheartedly in following such directions as the Company may prescribe under the terms of this plan.

General Regulations.—The following general regulations governing the operation of the plan have been prescribed by the Company:—

1. No wages shall be paid during periods of disability from illness or injury intentionally self-inflicted, or from the improper use of drugs or intoxicants, or from illness or injury due to wilful acts contrary to law and order.

2. In the case of disability due to childbirth, the maximum period for which disability wages may be payable shall not exceed six weeks.

3. An employee who becomes disabled while on a leave of absence that has been granted for personal reasons shall become eligible for disability wages on the date when he would normally have returned to work, subject to the completion of the prescribed waiting period which shall commence on that date.

4. If an employee who has been given notice of lay-off on account of lack of work incurs a disability prior to the effective date of the lay-off, he shall be paid disability wages for any period of disability extending up to but not beyond the effective date of the lay-off, subject to the completion of the prescribed waiting period.

5. An employee who becomes disabled while on vacation under the Vacation Plan shall be eligible for disability wages at the expiration of his vacation period, subject to the completion of the prescribed waiting period which shall commence on the day following the end of his vacation.

6. If a new disability occurs before payment in respect of another disability has ceased, the two or more disabilities involved shall be treated for the purpose of this Plan as one combined disability, and payments in respect thereof shall not exceed 13 weeks' full wages.

7. Disability wages shall be subject to any authorized deductions that would be made from earned wages. They shall also be subject, to the same extent as earned wages, to garnishment or other legal process; and will be reported by the Company, where required, to the proper taxation authorities.

8. The payment of disability wages shall cease immediately an employee is retired on pension.

The Company reserves the right to modify or terminate the Plan at any time.

I. L. O. Year Book of Labour Statistics

The second issue of the *Year Book of Labour Statistics* as an independent volume, has just been published by the International Labour Office, Geneva, it being presented for the first time in bilingual form.

The scope and general arrangement of the statistical tables presented in the Year Book, are, on the whole, the same as in the previous issue but several additions have been made. A new section on *population* has been added, giving the results of the most recent censuses, and, in particular, data on the gainfully occupied population and its distribution by sex, industrial group, and status. The section on *employment and unemployment* contains new tables, giving the international employment index numbers compiled by the International Labour Office; and the statistics of unemployment by sex are now shown in a separate table. In the section on *wages,* a new table has been added showing statistics of total wages, and the tables analysing the distribution of income and expenditure drawn from family budget enquiries have been considerably extended. Finally, several new series have been inserted in the tables showing employment, actual hours of work, and wages by industry or occupation. In order to render the volume more complete as a work of reference on social conditions, certain *economic statistics* (viz., national indexes of production, world indexes of production, index numbers of wholesale prices, and average rates of exchange) have been included in an Appendix.

SAFETY AND HEALTH AND WORKING HOURS IN BRITISH INDUSTRY

Annual Report of Chief Factory Inspector

IN his annual report for 1936, the Chief Inspector of Factories and Workshops in Great Britain makes some trenchant observations on the substantial increase* of industrial accidents in the United Kingdom.

Introducing his subject, the Chief Inspector considers that a comparison of accidents in a given year with its predecessor "is a misleading criterion of the true position as regards progress in accident prevention, owing to the influence of concomitant relevant factors, such as numbers employed; clearly, if the number in employment, and therefore at risk, has grown (as has happened in 1936) an increase in the number of accidents is almost inevitable. The vital question is whether accident *risk* is increasing or declining, and to answer this question use must be made of the widest retrospect possible." To determine this factor, the annual numbers of accidents (total and fatal) in manufacturing industries during a twelve-year period is plotted in relation to numbers employed. The result confirms this official's belief that the "risk of accident has been tending to decrease, but that this tendency has hitherto been masked by wide fluctuations from year to year."

Credit for this improving situation could be only "approximately distributed." Much was attributed to the Inspectorate, and to education through the National Safety Association and the Industrial Welfare Society. But possibly most credit was given "to the growing recognition by industrial associations and by individual employers that the safety of their workers is a definite social responsibility." Emphaszing that there is "more to be done," the Chief Inspector again draws his conclusions from the graph of the twelve-year period, indicating the number of accidents per person employed, or accident rate. This roughly paralleled the employment curve showing that "annual variations in numbers employed are associated with similar variations not only in mere numbers of accidents incurred, but also in the risk of incurring them." From this basis the Chief Inspector proceeds:

> Some of the causes of this association are obvious. During times of prosperity, longer hours of work and greater speed of production occur, more inexperienced young workers and more previously unemployed workers, long out of practice, are absorbed, and new machinery with unknown risks is installed; conversely, in times of depression, working hours are shortened, production is slowed down and probably the more accident-prone section of the working population is first discharged, leaving a more stable residue.

* An increase of 18 per cent for accidents generally and 9 per cent for fatalities in excess of the figures for 1935.

> To neutralize the unfavourable effects of all these factors would seem to be impossible under existing systems of production, and I am afraid that a rising toll of death and injury must still be regarded as a penalty to be paid for increased prosperity. There is, however, one means of reducing accidents which could and should be more widely adopted. Increase in production is accompanied by expansion in means of production, and in particular by the installation of new machinery and plant. From the cases that are brought to my notice, of accidents due to unfenced new machinery, the conclusion is inevitable that too often immediate production is the main, if not the only consideration, with the result that the question of safeguarding is left to the last and machines are put into use before proper fencing has been provided. It is imperative that the protection of the worker should receive the first attention and that no machinery or plant should be put into commission without ensuring that it is as safe as it is eventually intended to be.

Juvenile Accident Prevention.—The Chief Inspector again draws attention to the disparity between the accident rates of young workers under eighteen and those of adults in the same occupations. Accident prevention among juvenile workers he considers to be a "field for much more rapid improvement." An entire chapter of the report (Chapter III) is devoted to this phase of activity, and the progress made in the direction of greater care for the young worker. This chapter indicates that reported accidents were closely investigated, special attention being given to factories where the number of accidents was unduly high. Widely differing trades—from shipbuilding to the making of spectacle lens—were considered.

In one division a sample set of 77 factories, employing about 55,000 workers, was specially studied, in another the whole of the accidents occurring in one district were analysed, and while it is pointed out that the results must be necessarily regarded as tentative, some interesting facts emerge. It would appear that about 20 to 30 per cent of these accidents are caused by power-driven machinery, the remainder being due to falls, handling of material, sepsis following a trifling injury, etc.

An attempt was also made to apportion responsibility as between the employer and the victim, with the following results:—

	Boys	*Girls*
Percentage of accidents for which the firm was mainly responsible.	32·2	26·2
Percentage of accidents in which no blame attached..	23·8	22·7
Percentage of accidents for which the young worker was mainly responsible..	44·3	51·1

Another interesting point that emerges from the inquiry is the greater liability to accidents that prevails during the initial stages of employment. It was indicated that 10·4 per cent of the boys and 24·4 per cent of the girls who were injured during the first six months were injured during the first week.

As regards remedial action, the Chief Inspector refers to a conference of employers, convened by the Home Office, at which a committee was established. This committee distributed to employers' organizations and factories a memorandum of recommendations. Concerning the results the Chief Inspector states:—

"It is still too early to gauge the effects of these special efforts, but the statistical results for 1936, which can as yet only be approximately calculated, do not show any noticeable improvement."

Various reasons were advanced for the higher proportion of juvenile accidents. The conclusion reached by the Chief Inspector in dealing with the problem was to "educate each employer until he feels that care for the safety of the boys and girls in his charge is an accepted responsibility, and that, with very few exceptions, any serious accident occurring among them must *ipso facto* be regarded as a definite slur on his reputation."

The other chapters of the report follow the usual lines. Chapter I reviews the principal administrative action taken during the year, while Chapter II deals with safety generally.

In Chapter IV (on health) it is indicated that the incidence of epitheliomatous ulceration, though still high, has fallen in certain industries. A noticeable increase is recorded in the number of gassing cases especially at blast furnaces. In regard to silicosis, the Chief Inspector observes:

"It is disconcerting to find that in sand-blasting, severfal firms, who have lately substituted steel grit and shot for the dangerous abrasives sand and flint, have now reverted to their former practice, and the time has arrived to consider whether regulations controling the use of sand should not be made."

Reference is also made in the chapter to the possible ill-effects on general health of the conveyor system in the clothing and other industries unless speed of work is properly adjusted to the needs of the worker.

Hours of Employment.—In Chapter V there is presented a review of working hours in various trades, occupations and industries. The superintending inspector of this division states that the 47 or 48 hour week is still considered normal and that in complaints about long hours "it is common for the assumption to be made that 48 hours is the legal weekly maximum." It is also noted that there is considerable variation in different works in a large number of trades in all parts of the country. The hours are often less than forty-eight, varying from forty-four upwards.

As regards the woollen and cotton trades, the superintending inspector reports as follows:

"There has been much employment in the woollen and worsted trades up to 52 and 54 hours a week, but in the cotton trade 48 hours has been usual. There has been a revival in the cotton trade, however, of 'time-cribbing,' so prevalent in the old days of great activity. This consists of running the machinery for a few minutes extra at the beginning and end of each interval in order to increase production. It is a breach of a 48-hour agreement and in many cases a breach of the law, and is a mean way of exploiting both competitors and workers. A number of prosecutions have been taken, but unfortunately the penalties have sometimes been too low to act as real deterrents."

Some extension of the five-day week system, particularly in the factory areas near London, is also reported.

UNEMPLOYMENT ASSISTANCE IN GREAT BRITAIN

Second Annual Report of Unemployment Assistance Board

THE report of the Unemployment Assistance Board (Great Britain) for the year ended December 31, 1936, has been published recently. The operation of legislation in Great Britain under which the needy unemployed (who has exhausted his unemployment insurance benefit or who is ineligible for such benefit) is given assistance, was reviewed in the LABOUR GAZETTE for September, 1936, page 794 and previous issues. As outlined previously, according to the system prevailing in Great Britain such relief applicants are provided for under the Unemployment Assistance Act 1934 with its amending measures and revised regulations.

The central administrative body is the Unemployment Assistance Board appointed for the purpose of "creating a new social service for the assistance of able-bodied unemployed persons who nominally are wage-earners, not only for the relief of their material needs, but also for the promotion of their welfare."

It is this Board which has now presented its second report. The Chairman of the Board is Lord Rushcliffe, and in an introductory note he reviews the coming into effect of the revised regulations under which more than one third of the Board's applicants received increased allowances as compared with what they were

receiving under previous regulations. The following summarized paragraphs from the Chairman's introduction and the report itself are taken from the review in the August issue of *The Ministry of Labour Gazette* (Great Britain):

The number of applicants to the Board fell from 720,944 in December, 1935, to 603,734 in December, 1936, a fall of 16·3 per cent, as compared with a total fall of 12·6 per cent for all unemployed insured adults. Although the applicants to the Board do not, in the Chairman's words, "form a segregated class of persons of low employment value" there is nevertheless among them a problem of long-continued unemployment; and particular attention is drawn, in this connection, to two classes of the Board's applicants: the young applicants, and those over 45.

As regards the former, the Chairman observes that "there are still numbers of young applicants to the Board who have been unemployed for considerable periods, and are losing the appreciation of the difference that would be made in their lives if they could secure employment. During the period under review there have been difficulties in obtaining applicants for the training schemes conducted by the Ministry of Labour, despite the increased opportunities of employment that those schemes have demonstrably provided. A course of training at one of the Government Training Centres is followed, with the improvement in the employment market, by a job at the end of the course in practically every case. Placing in employment at the end of the courses at the Instructional Centres is not so easy, but the number of persons placed has shown a steady increase over the year." He adds that measures are being taken which it is hoped will lead to more men taking advantage of the opportunities offered.

As regards the older men, the Chairman states that 45 per cent of the Board's applicants between the ages of 18 and 64 are 45 years of age and over, as compared with 27 per cent of claimants to unemployment insurance benefit. He refers to the difficulties that will be caused over the coming years by the general changes in the age-distribution of the population, and observes that "industry will have to accustom itself to the fact that it cannot continuously find a supply of juvenile and young labour; it must be prepared to engage and retain older men, and if, under present conditions, some of these older men have been unemployed for long periods, opportunity will have to be given to them to adapt themselves once more to the physical requirements of employment." He adds that in some parts of the country these workers are congregated in localities which offer few chances of local re-employment at present.

In conclusion, the Chairman draws attention to the fact that a certain number of the board's applicants are handicapped in their attempts to regain employment by minor deficiencies of health which may be remediable; and he hopes that, with the extension of co-operation with other statutory services, and through the help of the Advisory Committees, it will be found possible to take steps to re-establish the physical condition of such applicants, so that they may improve their chances of securing employment.

Three chapters in the Report deal with the general administration of the unemployment assistance scheme, and with the changes necessitated by the coming into force of the revised Regulations; with the setting up of the Advisory Committees, and with their constitution and functions, the references to them for advice and their recommendations.

In another chapter, the various schemes of training and transference carried on in collaboration with the Ministry of Labour are described. It is stated that about 60 per cent of the trainees in the Government Training Centres, and 75 per cent in the Instructional Centres, are applicants to the Board. The field of recruitment at both classes of centres was extended, to keep pace with requirements and fill the places available at the centres.

A new type of local training centre in the Special Areas was in process of establishment by the Ministry of Labour towards the end of the year, where men who dislike the idea of leaving home for training may attend for a short period to accustom themselves to training conditions; it is hoped that at the end of that time they may go on to a Training or Instructional Centre. It will also be possible at these local centres to attend to remediable physical defects (of teeth or eyes) which have caused the rejection of an appreciable number of willing candidates for training.

43861—4½

New Brunswick Fair Wage Regulations

The following regulations under the New Brunswick Fair Wage Act (Labour Gazette, November 1936, page 994), were published in the New Brunswick *Royal Gazette* of September 1.

"1. Every employer shall, within ten days after the mailing to him by the Fair Wage Officer of a notice demanding the same, file with the Fair Wage Officer a statement showing,

(*a*) the names and addresses of his workers,
(*b*) their ages,
(*c*) the duties performed by each,
(*d*) the hours of work per day and per week performed by each,
(*e*) the rate of wages per hour, day and week of each worker,
(*f*) such other information as may be required by such notice.

2. Every employer shall keep posted on his premises copies of any order of the Fair Wage Board respecting wages or working conditions in his plant or establishment in such manner as the Board may direct.

3. The Fair Wage Board may fix time or times or the intervals at which wages shall be paid in any trade.

4. No employer shall discriminate against any worker, who is a party to or affected by any complaint, investigation or other proceeding under the Fair Wage Act.

5. Every employer, who contravenes any of these regulations or any order of the Fair Wage Board made thereunder, shall be guilty of an offence and liable to a penalty not exceeding three hundred dollars ($300.00)."

In the August issue of the Labour Gazette (page 895) reference was made to the appointment of the New Brunswick Fair Wage Board.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JULY, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on August 1 was 10,320, the employees on their payrolls numbering 1,143,109 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for July was 1,811, having an aggregate membership of 203,375 persons, 8.9 per cent of whom were without employment on August 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of August, 1937, as Reported by Employers

Employment at the beginning of August showed moderate improvement, continuing the forward movement that with only one exception has characterized the industrial situation since the opening of the year. Statements were tabulated by the Dominion Bureau of Statistics from 10,320 firms, whose payrolls aggregated 1,143,109 persons, as compared with 1,134,466 at July 1. The index number, based on the 1926 average as 100, rose from 119·1 in the preceding month to 120·0 at August 1, when it was more than fourteen points higher than at the same date in 1936.

The experience of the years, 1921-1936, indicates that employment has usually though not invariably gained at the beginning of August, there being, on the average, a fractional increase in the index. The advance at the latest date approximated this average increase, so that the August 1 index, after correction for seasonal influences, showed no change from the preceding month, standing at 114·9; this was higher than at any other date since the first quarter of 1930.

A brief review of the situation as reported by leading employers in the elapsed months of 1937 shows a general employment gain of 15·6 per cent from January 1 to August 1; this was considerably greater than the average advance of 10·4 per cent, between those dates in the years, 1921-1936. Only in 1922, 1926, 1928 and 1929 did the percentage increase from the opening of the year to midsummer exceed that recorded in the present year. On the whole, the improvement during 1937 has been widely distributed, both geographically and industrially.

Heightened activity was noted at the date under review in metallic ore mining, communications, building and highway construction, hotels and restaurants and wholesale trade. On the other hand, retail trade, railway construction and maintenance, steam railway operation, coal-mining and manufacturing were slacker. Within the last-named, the greatest losses were of a seasonal character in textiles and iron and steel, while improvement was indicated in the food, leather, electric light and power and some other groups.

As already stated, the unadjusted employment index, calculated on the 1926 average as 100, stood at 120·0 at the beginning of August, 1937, compared with 119·1 at July 1, while at August 1 in the sixteen preceding years, the crude index was as follows: 1936, 105·6; 1935, 101·1; 1934, 99·9; 1933, 87·1; 1932, 86·3; 1931, 105·2; 1930, 118·8; 1929, 127·8; 1928, 119·3; 1927, 110·5; 1926, 105·5; 1925, 97·5; 1924, 95·8; 1923, 101·4; 1922, 94·2 and 1921, 90·0.

For August 1, 1936, 9,795 firms had reported an aggregate payroll of 998,564 persons, while in the preceding month they had had 988,838 employees. The gain then had occurred mainly in manufacturing, mining, construction and maintenance and transportation.

Employment by Economic Areas

Activity increased in Prince Edward Island, New Brunswick, Quebec, Saskatchewan and Alberta; there were reductions in personnel

in Nova Scotia and Manitoba, while the situation in Ontario and British Columbia showed no general change from July 1. Employment in each of the economic areas was in greater volume than at the same date in any of the last five years.

Maritime Provinces.—Statements were tabulated from 726 firms in the Maritime Provinces employing 97,043 persons, or 907 fewer than in the preceding month. Coal-mining, communications, building, services and trade showed moderate improvement, while logging, shipping, highway and railway construction were slacker. The manufacturing group showed no general change; pulp and paper mills reported small increases, but fish-canneries were seasonally slacker. The general index, at 134·3, was over twenty points higher than at the same date in 1936, when general improvement had been indicated; it was also higher than at the beginning of August in any other year since 1930. The following shows indexes for each of the Maritimes in the last three months:—

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Provinces	Relative Weight	Index Numbers (1926=100) Aug. 1, 1937	July 1, 1937	June 1, 1937
Prince Edward Island	1·6	82·5	79·7	82·0
Nova Scotia	52·1	131·5	138·3	124·3
New Brunswick	46·3	140·8	136·1	121·4
Maritimes	100·0	134·3	135·8	122·0

The 691 employers reporting for August 1, 1936, had 81,675 persons on their payrolls, an increase of almost 1,600 over July 1 of last year.

Quebec.—Further improvement was shown in Quebec, according to returns from 2,460 establishments with 336,324 workers, as against 328,738 at July 1. The level of employment was decidedly higher than at August 1, 1936, when a moderate reduction in personnel had been noted, and the index stood at 101·3, as compared with 120·8 at the latest date. Logging, mining, shipping, building and highway construction and hotels and restaurants reported increased employment at the beginning of August; in manufacturing there was a slight gain on the whole, due to greater activity in leather, lumber, food, pulp and paper,

electric light and power and electric apparatus plants, while textile, iron and steel and some other divisions were slacker, the losses being partly seasonal in character. Retail trade also reported midsummer dullness.

For August 1 of last year, 2,312 employers had reported 280,344 workers, as compared with 280,973 at July 1. Manufacturing and a few other industries had shown curtailment.

Ontario.—Industrial employment in this province showed little general change at August 1, when the 4,559 co-operating firms had 475,754 employees, or 52 more than at July 1. The tendency at August 1 has been upward in six and downward in ten of the preceding years for which data are available, the average midsummer change being a slight decline. At the date under review, there were advances in mining, communications, services and building and highway construction, those in the last-named being considerable. On the other hand, manufacturing as a whole, logging, retail trade and railway construction were slacker; within the group of factory employment, iron and steel reported pronounced seasonal curtailment, and there were smaller losses in food, pulp and paper, textile and chemical factories, while leather, rubber and electric light and power plants showed rather greater activity. Employment at August 1, 1936, had increased over the preceding month, but the index number then was many points lower, standing at 107·1, as compared with 122·2 at the latest date. Returns had been tabulated for the beginning of August of last year from 4,317 employers with 413,724 persons on their payrolls, a number rather larger than in the preceding month.

Prairie Provinces.—The situation in the Prairie Provinces as a whole continued to improve; the 1,476 establishments furnishing data had 134,646 workers, as compared with 132,683 at the beginning of July. There were gains in communications, hotels, and restaurants, building and highway construction, those on roadwork being extensive. On the other hand, employment in manufacturing was slacker, the losses in the iron and steel group being considerable; logging, coal-mining and railway construction also released workers. The level of employment was rather higher than at August 1 of last year, the latest index standing at 105·6 compared with 103·9 at the same date in 1936, when a total of 1,428 firms had reported an aggregate staff of 131,706 persons, compared with 129,260 at July 1, 1936. The following shows index numbers for each of the Prairie Provinces in the last three months:—

Provinces	Relative Weight	Index Numbers (1926=100) Aug. 1, 1937	July 1, 1937	June 1, 1937
Manitoba	45·0	99·0	100·3	97·4
Saskatchewan	23·3	118·8	110·2	103·9
Alberta	31·7	107·1	105·7	99·4
Prairies	100·0	105·6	104·0	99·3

British Columbia.—The situation in British Columbia at August 1 was practically unchanged from July 1; manufacturing, transportation, services and trade showed heightened activity, while there was little general change in mining. Within the manufacturing division, the greatest gains occurred in fish and fruit and vegetable canneries, where they were of a seasonal character. Returns were compiled from 1,099 firms employing 99,342 persons, or 51 fewer than in the preceding month. An increase had been indicated at the beginning of August of last year, but the index was then decidedly lower than at the latest date, when it was also higher than at August 1 in any of the preceding six years. The 1,047 employers co-operating at that date in 1936 had reported 91,115 on their payrolls, as against 88,333 in the preceding month.

Index numbers by economic areas are given in Table 1.

Employment by Cities

Employment increased in Quebec City, Hamilton and Vancouver, while in Montreal, Toronto, Ottawa, Windsor and Winnipeg, curtailment was indicated. The situation in each of these centres was more favourable than at August 1 in any of the last five years.

Montreal.—There was a decline in Montreal at the date under review, for which the 1,410 co-operating firms reported a combined payroll of 158,002 men and women, or 560 fewer than at July 1. Manufacturing, steam railway operation and retail trade showed contractions, while shipping and construction afforded greater employment. Within the manufacturing group, textiles were seasonally dull, and there were also losses in rubber and iron and steel plants, while leather, vegetable food, tobacco and beverage, electrical apparatus and some other factories reported improvement. Activity was greater than at August 1, 1936, when a larger decrease had been indicated by the 1,340 establishments furnishing data, whose staffs aggregated 138,226.

Quebec.—Moderate improvement was reported in Quebec City, mainly in construction, transportation, trade and services, while manu-

facturing was rather quieter. Statements were received from 179 concerns having 14,503 workers on their payrolls, compared with 14,194 in the preceding month. A similar gain had been made at August 1 of a year ago, but employment was then in smaller volume, according to information which had been tabulated from 168 employers of 12,844 workers.

Toronto.—There was a falling-off in activity in Toronto, according to data from 1,547 firms employing 134,113 persons, or 2,178 fewer than at the beginning of July. The decline was largely seasonal, employment having been reduced at August 1 in twelve of the fifteen preceding years for which statistics are available; the contraction this year was much greater than at the same date in 1936, also exceeding the average loss at August 1 in the period, 1922-1936. However, the index was higher than at the beginning of August in any of the years since 1930. Manufacturing showed a decline as compared with July 1, 1937, there being reductions in food, iron and steel, electrical apparatus and some other factories. Trade was affected by midsummer dullness, and the service and transportation divisions also released help, while building construction showed improvement. For August 1, 1936, 1,466 concerns had reported a combined working force of 125,094 men and women.

Ottawa.—Employment in Ottawa declined, 288 persons being released from the staffs of the 205 co-operating employers, who had 14,959 workers at August 1. There were moderate reductions in manufacturing, notably of pulp and paper products, and in road construction and trade. Employment at the beginning of August, 1936, had also decreased, but the index then was rather lower; 191 establishments had reported for August 1 of last year, their payrolls including 14,099 employees.

Hamilton.—There were further moderate increases in employment in Hamilton, where 290 firms reported 37,959 men and women on their pay lists, as against 37,502 in their last return. Manufacturing showed an increase, mainly in electrical apparatus and iron and steel products, while food factories were temporarily slacker. Other industries reported little general change. Employment was much more active than at the same date of last year, when a smaller advance had been recorded by the 281 co-operating employers, whose staffs had aggregated 32,065.

Windsor.—The trend of employment in Windsor was seasonally downward; statistics were received from 179 firms employing 18,428 workers, or 2,025 fewer than at July 1. Automobile and other iron and steel works reported reduced employment during the holiday season, while food and some other manufacturing establishments and trade showed rather greater activity. A moderate increase had been indicated at August 1, 1936, as compared with the preceding month, but the index then was many points lower than at the date under review. A combined payroll of 15,684 men and women was reported by the 172 employers furnishing information for August 1 of last year.

Winnipeg.—A decline was recorded in Winnipeg, according to 487 firms who had 41,905 employees, as compared with 42,642 at the beginning of July. Curtailment was noted in manufacturing, mainly in the iron and steel division, while the changes, on the whole, in other industries were slight. A favourable movement had been in evidence at the same date of last year, when 476 establishments had reported 40,256 workers. However, employment was then at a rather lower level than at the date under review.

Vancouver.—In Vancouver, transportation and construction afforded greater employment, there being only small changes in the remaining industries. Returns were compiled from 450 employers with 37,868 persons on their staffs, as compared with 37,050 in the preceding month. A larger gain had been indicated at August 1, 1936, by the 433 co-operating firms, whose payrolls aggregated 35,048; the index number then, at 109·2, was several points lower than at the latest date, when it stood at 117·3.

Index numbers of employment by cities are given in Table 2.

Employment by Industries

Manufacturing.—For the first time since the beginning of January, there was at August 1 a slowing-up in activity in manufacturing establishments, 5,998 of which reported 599,986 operatives on their payrolls, as compared with 605,027 at July 1. This was due to a considerable extent to shutdowns for vacations, the loss occurring largely in Ontario where advantage was taken of the civic holiday week-end for that purpose. The crude index of employment stood at 118·1 at August 1, when with the exception of July 1, 1937, it was higher than at any other date since October 1, 1929; in the preceding month the index had been 119·0. It is interesting to note that since the opening of the year there has been an increase of 15·3 per cent in factory employment, an expansion that exceeds the average gain of 11·6 per cent between January 1 and August 1 in the experience of the years, 1921-1936.

On the average, employment in manufacturing at August 1 in the last sixteen years has shown a very slight advance. After correction for seasonal movement, the index therefore

declined from 115·9 at July 1, 1937, to 114·8 at the beginning of August; in these last two months the seasonally-adjusted indexes have been higher than at any other date since January 1, 1930.

Increased activity was indicated at the date under review in the leather, animal and vegetable food, tobacco and beverage, electric light and power, electrical apparatus and mineral product industries; the seasonal gains in fruit and vegetable canning were most extensive. On the other hand, large declines took place in textile and iron and steel plants, where they were seasonal in character, and there were also losses in lumber, chemical and some other factories.

The following shows the unadjusted index numbers at the beginning of August in the years for which data are available: 1937, 118·1; 1936, 104·9; 1935, 99·8; 1934, 94·2; 1933, 85·2; 1932, 82·6; 1931, 94·7; 1930, 110·2; 1929, 121·6; 1928, 115·2; 1927, 107·0; 1926, 103·6; 1925, 95·8; 1924, 93·3; 1923, 101·2; 1922, 92·9 and 1921, 88·0.

Animal Products.—Fish canneries registered gains, which though smaller than those recorded at August 1, 1936, nevertheless resulted in a large increase over July 1, 1937, in the animal food group as a whole. Statistics were received from 323 firms employing 28,045 workers at August 1, as compared with 27,529 in the preceding month. The trend at August 1 in other years for which data are available has frequently been downward; the latest index at 144·7, was very slightly higher than at the begining of August in 1936, being also higher than at the same date in any other year since 1920.

Leather and Products.—Expansion was shown in employment in the leather group, 638 persons being added to the staffs of the 299 cooperating manufacturers, who employed 23,845 at August 1. Much of the improvement occurred in shoe factories in Quebec and Ontario. A smaller gain had been reported by the firms making returns for the same date a year ago, when the index of employment was several points lower.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Aug. 1, 1921	90·0	102·4	83·7	90·5	96·8	85·4
Aug. 1, 1922	94·2	105·5	86·1	96·7	100·8	88·6
Aug. 1, 1923	101·4	109·8	97·1	103·4	103·6	95·2
Aug. 1, 1924	95·8	101·2	94·1	96·2	95·7	95·0
Aug. 1, 1925	97·5	103·5	96·4	96·7	96·5	99·6

Relative Weight of Employment by Economic Areas as at Aug. 1, 1937	100·0	8·5	29·4	41·6	11·8	8·7

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Lumber and Products.—Rough and dressed lumber mills were somewhat slacker, and there was also a decrease in wooden vehicle factories, while the furniture and some other divisions reported moderate improvement. The lumber manufacturing industry as a whole registered its first decline since the opening of the year: the payrolls of the 891 firms furnishing data aggregated 52,755 operatives, as against 53,165 in their last report. There were increases in Quebec, but the tendency in Ontario and British Columbia was downward Activity in the group as a whole was much greater than at August 1, 1936, although a gain had then been recorded over the preceding month.

Musical Instruments.—Employment in musical instrument factories was better than at July 1, being also at a higher level than in the corresponding month of last year. Statements were received from 35 manufacturers who had enlarged their payrolls by 40 persons to 1,649 at August 1, 1937.

Plant Products, Edible.—Important additions to staffs were registered in fruit and vegetable canneries and in the sugar and syrup division; 487 employers reported 37,315 workers, or 2,327 more than at the beginning of July. The increase took place largely in Quebec, Alberta and British Columbia. Employment was in greater volume than at August 1, 1936, when a similar advance had been indicated.

Pulp and Paper Products.—Pulp and paper mills reported considerably heightened activity, but there was a moderate falling-off in paper products and in printing and publishing. Statistics were received from 616 manufacturers whose payrolls were increased by 94 employees to 69,381 at August 1. There were advances in New Brunswick and Quebec, while elsewhere the situation was unchanged, or a downward tendency was in evidence. A rather larger gain had been noted in the corresponding month last summer, but the index was then lower, standing at 104·3, as compared with 113·8 at August 1, 1937.

Rubber Products.—Little change, on the whole, took place in rubber works, 55 of which had 13,903 persons on their payrolls, compared with 13,914 at July 1. Improvement in Quebec was offset by curtailment in Ontario. A general increase had been noted at the be-

Relative Weight of Employment by Cities as at Aug. 1, 1937	13·8	1·3	11·7	1·3	3·3	1·6	3·7	3·3

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

ginning of August of a year ago; however, the level of employment was then decidedly lower.

Textile Products.—Most divisions of the textile group showed seasonal curtailment, that in garment and personal furnishings plants being most marked; however, there were also losses on a smaller scale in cotton, hosiery and knitting and miscellaneous textile factories. The 1,098 co-operating manufacturers employed 106,670 persons, as compared with 108,863 at July 1. Most of the reduction was in Quebec and Ontario. Rather smaller decreases had been noted at the beginning of August, 1936, but the index then stood at 113·7, compared with 123·6 at the date under review.

Tobacco, Distilled and Malt Liquors.—Data were received from 186 establishments in these industries, whose payrolls, aggregating 17,026 at August 1, showed an increase of 239 over July 1. There were small gains in beverage and tobacco factories. The index at the same date last year was several points lower than at the date under review, despite the fact that greater improvement had then been recorded.

Chemicals and Allied Products.—A contraction was reported in chemical plants at the beginning of August, 222 persons having been released since the preceding month from the payrolls of the 206 co-operating manufacturers, who employed 12,542 workers. The index was higher by between thirteen and fourteen points than at August 1, 1936, when a smaller reduction had been indicated.

Clay, Glass and Stone Products.—A slight increase was noted in the building material industries, according to 209 employers with 11,329 workers, or 80 more than in their last report. Employment was in decidedly greater volume than at the same date last summer, when little general change had occurred.

Electric Light and Power.—Considerable improvement was noted in electric current works, 96 of which reported 16,294 employees, compared with 15,671 at July 1. The index number at the date under review was several points higher than at August 1, 1936, when there had been a rather smaller gain.

Electrical Apparatus.—Employment in electrical apparatus plants continued to advance;

Relative Weight of Employment by Industries as at Aug. 1, 1937	100·0	52·5	3·1	6·2	2·1	9·4	14·5	2·7	9·5

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

at the beginning of August, 125 of these employed 20,867 operatives, or 353 more than in the preceding month. The situation was better than at August 1 of last year, a reduction having then been indicated.

Iron and Steel Products.—Crude, rolled and forged, machinery, iron and steel fabrication and some other factories reported improvement, while land vehicle, agricultural implement, wire, heating appliance and foundry and machine shops showed declines, those in automobile factories being most pronounced. A combined labour force of 137,821 persons was indicated by the 875 co-operating manufacturers, who had 144,840 at July 1. Firms in Ontario recorded the largest losses, but the trend was also downward in New Brunswick, Quebec, Manitoba and Alberta. A smaller loss had been noted at the beginning of August in 1936; the index then, however, was some twenty points lower than at the date under review.

Non-ferrous Metal Products.—For the first time in 1937, a decrease was reported in this group, according to the 173 firms furnishing data, who employed 25,602 workers at August 1, compared with 25,713 in the preceding month. Most of the shrinkage occurred in the aluminum division. Employment was in much greater volume than at August 1 of a year ago, although heightened activity had then been indicated as compared with the preceding month.

Mineral Products.—Statistics tabulated from 145 manufacturers of mineral products showed that they employed 15,827 workers, or 183 more than in their last report. The index was decidedly higher than at the same date in 1936, when there had also been an increase.

Logging

Seasonal dullness affected employment in logging camps in most provinces, although activity advanced in Quebec. Statements were

[1] The "Relative Weight" column shows the porportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

tabulated from 334 firms throughout the Dominion, employing 35,595 persons, or 109 fewer than in the preceding month. Much greater losses had been reported at August 1, 1936, and the index then stood at 85·0, as compared with 124·7 at the date under review; the latter index is higher than at the begining of August in other years for which data are available.

Mining

Coal.—There was a decrease of 280 in the staffs of the 102 operators furnishing returns, bringing them to 22,273 at August 1, 1937. Improvement was indicated in the Eastern coal-fields, but there were losses in Alberta. A gain had been registered at the same date of last year, when the index was slightly higher.

Metallic Ores.—A further advance was recorded in metallic ore mines, whose employment was decidedly more active than at the beginning of August of last year. Returns were received from 224 firms with 38,674 workers, as compared with 38,276 in their last report. An upward trend was shown in Quebec, Ontario and Manitoba.

Non-Metallic Minerals (Other than Coal).—Little general change was noted in this division, in which 88 employers reported 10,095 persons on their payrolls at the beginning of August. Employment was at a much higher level than in the same month last summer, or indeed, than in August of any other year since 1929.

Communications

There was an increase in the personnel of telephone and telegraph companies at August 1; the communication firms co-operating with the Dominion Bureau of Statistics had 24,003 employees, as against 23,501 in the preceding month. The number engaged in this group was greater than at August 1 of a year ago, when a similar gain had been noted.

Transportation

Street Railway and Cartage.—A slight advance was registered in this division, according to data received from 245 employers with 27,163 workers, as against 27,105 at July 1. A large increase had been recorded at August 1, 1936, when the index was practically the same.

Steam Railway Operation.—The trend of employment in steam railway operation was unfavourable in Quebec and the Prairie Provinces, while elsewhere the changes were small; the 99 companies and divisional superintendents furnishing data throughout the Dominion reported 61,808 employes, compared with 62,117 in their last report. Marked improvement had occurred at the same date in 1936, but the index then, at 77·8, was practically the same as that of 77·7 at the latest date.

Shipping and Stevedoring.—Statements were tabulated from 112 companies in this group, employing 18,159 workers, or 96 fewer than at July 1, 1937. There were gains in Quebec and British Columbia, but the tendency was downward in the Maritime Provinces. A similar slight decline on the whole had been noted at the beginning of August a year ago, when employment in shipping was not quite so active.

Construction and Maintenance

Building.—Considerable increases were again reported in building construction, 772 contractors adding 3,136 persons to their staffs, bringing them to 31,542 at the beginning of August. There were advances in most of the provinces, but those in Quebec and Ontario were most pronounced. Employment was decidedly brisker than in the same month of 1936, when the improvement indicated was on a smaller scale.

Highway.—The number engaged on highway construction and maintenance showed an increase in New Brunswick, Quebec, Ontario and the Prairie Provinces. Data were received from 390 employers with 100,910 workers on their payrolls, as compared with 88,300 at the beginning of July. A much smaller gain had been noted at August 1, 1936, and employment on road work was then in less volume.

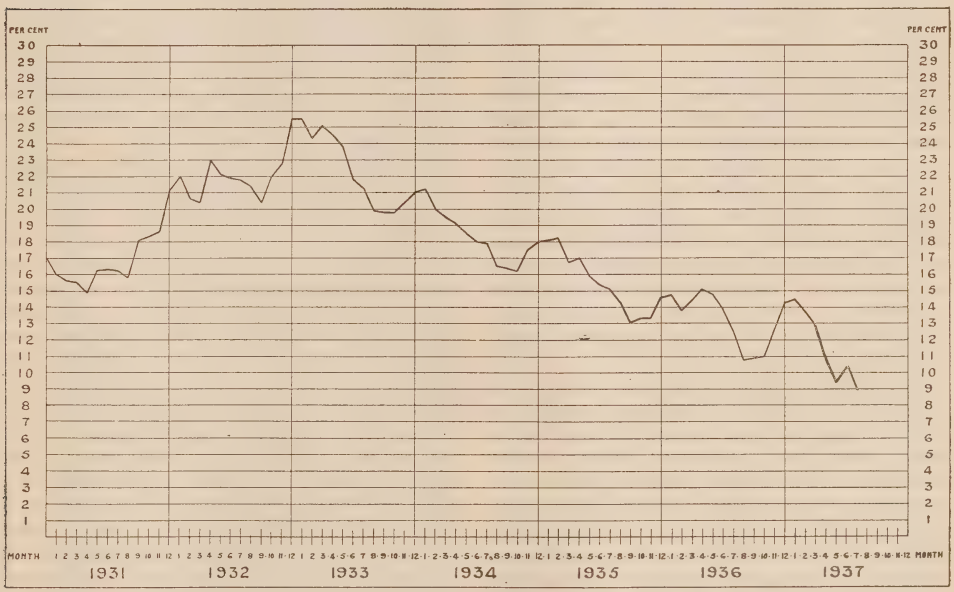
Railway.—Curtailment was recorded in this group at August 1, 1937, when 39 companies and divisional superintendents reported that they had 33,810 men on their staffs, compared with 35,998 in the preceding month. There were decreases in most provinces, those in the Prairies being greatest. The index number was many points lower than at the beginning of August of a year ago, when a general increase had been noted.

Services

There were continued gains in the service group, mainly in hotels and restaurants; 477 firms employed 30,895 persons, compared with 29,978 at the beginning of July. Similar improvement had been recorded at August 1, 1936, but the level of employment was then lower.

Trade

Retail stores showed a seasonal falling-off in employment, but that in wholesale houses was more active, according to 1,357 trading establishments, which employed 108,196 workers, as compared with 109,170 at July 1. Ontario reported most of the decline in the trade group as a whole. Smaller seasonal losses had occurred at the beginning of August last year, but the index then was several points lower.



Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the Close of July, 1937

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades or who are idle due to illness are not considered as unemployed, while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The local trade union situation at the close of July was more favourable than in the preceding month, as evident from the reports furnished by 1,811 labour organizations involving a membership of 203,375 persons. Of these, 18,093 were registered as out of work on the last day of the month, a percentage of 8·9 as compared with 10·4 per cent of inactivity in June. Improvement in greater measure was manifest from July, 1936, when 12·5 per cent of the members reported were unemployed. Quebec and Ontario unions each showed gains in available work of over 2 per cent from June, the garment trades, particularly in the latter province, reflecting a considerably greater volume of activity, while in Quebec the metal trades also contributed substantially to the employment rise recorded. Increases in activity of lesser importance were evident among Nova Scotia and British Columbia unions. Some falling off in employment however, was manifest by New Bruns-

wick, Manitoba and Alberta members, and in Saskatchewan little variation was apparent in the level of activity from June, though the tendency was adverse. When contrasted with the returns for July of last year, noteworthy gains in employment were recorded during the month reviewed by Quebec and Ontario members, which were of a rather general nature. In British Columbia, Nova Scotia, New Brunswick and Manitoba also, heightened activity was apparent. Alberta members, mainly on account of slackness in the coal mines of the province, showed moderate employment recessions. In Saskatchewan, however, the percentage of idleness remained identical with that of the corresponding month last year.

Each month the reports on unemployment among trade union members in the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. During July, both Montreal and Toronto unions showed increases in employment of over 6 per cent from June, while in St. John and Vancouver the trend was but fractionally upward. On the contrary, Winnipeg, Edmonton, Regina and Halifax unions suffered losses in activity, which were not of particular importance in any one city. Contrasted with the returns for July, 1936, St. John members were considerably busier during the month reviewed, and in Montreal and Toronto also, conditions were substantially improved. Vancouver members showed more moderate employment expansion and in Halifax, Winnipeg and Regina activity increased by less than one per cent. Edmonton was the only city to indicate a less favourable tendency from July last year, though the variation noted was quite slight.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1931, to date. The curve during July followed a slightly downward course from that of the previous month denoting a better volume of available work. In this trend the curve paralelled its course of the corresponding month a year ago, though the level reached at the close of the month under survey was below that of July, 1936.

Employment in the manufacturing industries was in greater prevalence during July than in the preceding month according to the reports compiled from 517 labour organizations, with a total of 73,581 members. Of these, 6,319 or a percentage of 8·6 were without employment at the end of the month in contrast with a percentage of 11·9 in June. The situation also showed improvement from July last year, when 11·2 per cent of unemployment was recorded. The garment trades, which in June had indicated considerable quietness, registered pronounced employment recovery during July, particularly in the Ontario establishments. Among leather, iron and steel, and glass workers, metal polishers and general labourers, gains on a moderate scale occurred, printing tradesmen, cigar and tobacco, and brewery workers showing but slight employment advances. A considerable drop in activity from June, however, was noted by hat, cap and glove, and textile and carpet workers, paper makers and meat cutters and butchers, while employment for wood workers, and bakers and confectioners eased off slightly. Among jewellery workers an unchanged situation was manifest from June. In contrasting with the reports for July, 1936, garment and jewellery workers, metal polishers, general labourers and leather workers were much better engaged during the month reviewed, and more moderate expansion was apparent among wood, iron and steel, and cigar and tobacco workers, and bakers and confectioners. The tendency was also slightly better for printing tradesmen, and brewery workers. Extensive employment losses, however, were reflected by hat, cap and glove workers, meat cutters and butchers, glass workers and paper makers from July a year ago. Among textile and carpet workers there was slight employment cessation.

The situation in the coal mining industry during July showed little variation from the previous month, unemployment standing at 15·0 per cent as contrasted with a percentage of 14·1 in June. The percentage for the month reviewed was based on the reports received from 49 unions, involving a membership of 17,315 persons, 2,592 of whom were idle at the end of the month. Activity for Alberta and British Columbia miners eased off slightly from June, while in Nova Scotia a better employment tendency was noted, though the change was quite small. Conditions in coal mining as a whole, were somewhat less favourable than in July last year, when 12·4 per cent of idleness was recorded. Inactivity in the Alberta mines was an important factor in this downward employment movement noted during the month reviewed, though in Nova Scotia there was a slight lessening in the volume of work afforded. British Columbia members, however, indicated a much better level of employment than in July last year.

The building and construction trades, with 199 associations reporting for July, a membership of 21,869 persons, showed that 4,890, or a percentage of 22·4 were without employment on the last day of the month, contrasted with percentages of 24·6 in June and 37·4 in July,

1936. Decided employment advancement from June was recorded by tile layers, lathers and roofers, painters, decorators and paperhangers, bridge and structural iron workers, and bricklayers, masons and plasterers, while granite and stone cutters, and plumbers and steamfitters showed but slight gains in the volume of work available. Hod carriers and building labourers, however, were considerably slacker than in June, and among carpenters and joiners moderate curtailment of employment was evident. Activity for electrical workers and steam shovelmen was also somewhat curtailed. A substantially better situation than in July, 1936, was apparent among steam shovelmen, bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters, plumbers and steamfitters, and tile layers, lathers and roofers. Appreciable gains in activity were also shown by painters, decorators and paperhangers, and advances on a smaller scale were registered by electrical workers. Hod carriers and building labourers were the only tradesmen to report curtailment in work afforded, which was of rather noteworthy proportions.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

April, 1937	8·2	5·5	15·6	8·6	8·6	10·0	16·9	7·4	11·1
May, 1937	8·4	5·0	14·1	6·2	7·0	8·0	15·8	5·8	9·5
June, 1937	5·9	4·7	15·3	7·6	5·7	7·2	16·6	8·0	10·4
July, 1937	4·4	5·8	13·2	5·3	7·1	7·4	18·0	6·9	8·9

In the transportation industries there was a slight tendency toward increased employment manifest during July from both the preceding month and July, 1936, as indicated by the reports tabulated from 795 associations, including 62,947 members. Of these, 2,917, or a percentage of 4·6 were idle at the end of the month as compared with percentages of 5·2 in June and 6·3 in July, 1936. Steam railway employees, whose returns constituted over 76 per cent of the entire group membership reported, and street and electric railway employees showed a slight rise in work afforded in both comparisons. Among navigation workers, and teamsters and chauffeurs, there was some falling off in activity from June, but improvement was reflected from July of last year.

Retail shop clerks during July showed all their members busy as in June, while in July last year 4·7 per cent of unemployment was recorded. Reporting for July were 4 associations of these workers, with a membership aggregate of 1,070 persons.

Reports were tabulated at the close of July from 76 associations of civic employees, involving 9,185 members, 49 or 0·5 per cent of whom were without work at the end of the month, contrasted with percentages of 0·8 in June, and 1·8 in July last year.

The level of activity for workers in the miscellaneous group of trade remained much the same during July as in June, the 132 organizations making returns, with 7,786 members, showing that 539 or 6·9 per cent were unemployed on the last day of the month, as compared with a percentage of 6·7 in June. Stationary engineers and firemen, and unclassified workers showed a tendency toward increased employment from June, which was slightly more than counteracted by the recessions apparent among theatre and stage employees, and barbers. Hotel and restaurant employees indicated the same percentage of idleness as in June. The situation in the miscellaneous group of trades as a whole was moderately improved from July last year, when 10·2 per cent

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

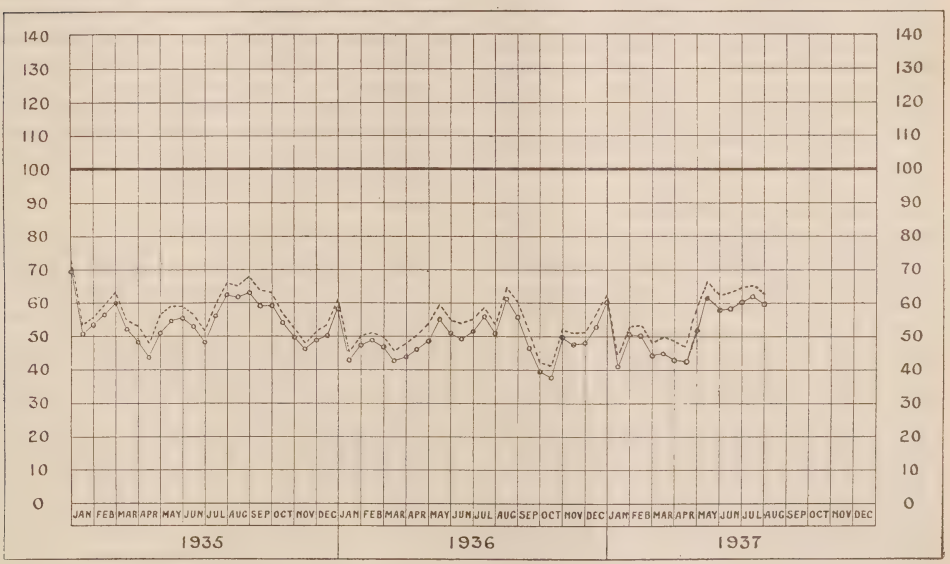
of unemployment was recorded. In this comparison stationary engineers and firemen showed rather noteworthy expansion during the month reviewed, and lesser gains were reflected by hotel and restaurant employees. Slightly increased work was afforded theatre and stage employees. Among unclassified workers and barbers, however, some slowing up in activity was apparent.

Fishermen were much slacker during July than in either the preceding month or July last year, the 3 unions from which reports were received, with 621 members, showing an unemployment percentage of 16·1, contrasted with a percentage of 0·8 in both months used for comparative purposes.



The 2 unions of lumber workers and loggers making returns for July, with 770 members, reflected an unemployment percentage of 1·7 as compared with a percentage of 1·6 in June, and with 2·0 per cent of inactivity in July a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1936 inclusive, and also the percentage of unemployment by provinces for July of each year from 1919 to 1934 inclusive, and for each month from July, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for July, 1937

The volume of business transacted by offices of the Employment Service of Canada during July, 1937, showed an increase of nearly 12 per cent in the average daily placements when compared with June, 1937, and of over 33 per cent in comparison with the work effected during the corresponding month a year ago. Noteworthy gains over last month were recorded in construction and maintenance and farming, with a smaller one in mining; losses of moderate amount being shown in services, logging and manufacturing, with nominal declines, only, listed in trade and transportation. When compared with July a year ago, all industrial divisions, except farming, in which a minor loss was shown, registered increased placements, a very large gain being effected in construction and maintenance, in which group most of the relief placements were made. Other divisions which showed noteworthy increases were logging, services and manufacturing, with more moderate gains noted in trade and transportation, the advance in mining being quite small.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The accompanying chart shows the trend of employment since January, 1935, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted from the graph that the curves of vacancies and placements in relation to applications followed an upward trend during the first half of July, but declined slightly during the second half of the period under review. At its close, however, the levels reached were between 8 and 9 points above those attained at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 65·3 during the first half and 62·6 during the second half of July, 1937, in contrast with ratios of 58·8 and 53·8 during the corresponding periods in 1936. The ratios of placements to each 100 applications during the periods under review were 62·0 and 59·8, as compared with 55·9 and 50·8 during the corresponding month of 1936.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1937, was 1,521, as compared with a daily average of 1,149 during the corresponding month a year ago and with 1,401 recorded daily in June, 1937.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,384, in comparison with 2,049 in July, 1936. Applications for work during the preceding month of 1937 averaged 2,189 daily.

The average number of placements made daily by offices of the Service during July, 1937, was 1,450, of which 1,080 were in regular employment and 370 in work of one week's duration or less, as compared with a total daily average of 1,300 during the preceding month. Placements in July a year ago averaged 1,088 daily, consisting of 729 in regular and 359 in casual employment.

During the month of July, 1937 the offices of the Service referred 38,713 persons to vacancies and effected a total of 37,675 placements. Of these, the placements in regular employment were 28,072, of which 23,528 were of men and 4,544 of women, while placements in casual work totalled 9,603. The number of vacancies reported by employers was 29,459 for men and 10,073 for women, a total of 39,532, while applications for work numbered 61,963, of which 48,488 were from men and 13,475 from women. Reports for June, 1937, showed 36,411 positions available, 56,903 applications made and 33,794 placements effected, while in July, 1936, there were recorded 29,851 vacancies, 53,257 applications for work, and 28,271 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927, to date:—

Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937 (7 months)	145,998	60,240	206,238

NOVA SCOTIA

During July, positions offered through employment offices in Nova Scotia called for nearly 15 per cent more workers than in the preceding month and over 100 per cent more than during the corresponding month of last year. There was an increase also in placements of nearly 16 per cent when compared with June and of over 102 per cent in comparison with July, 1936. All industrial groups participated in the increase in placements over July of last year, the most noteworthy gains being in the highway division of construction and maintenance, and services. Placements by industrial divisions included manufacturing 53; logging 51; farming 79; mining 50; construction and maintenance 912 and services 392, of which 296 were of household workers. During the month 1,007 men and 106 women were placed in regular employment.

NEW BRUNSWICK

Employment opportunities, as indicated by orders received at employment offices in New Brunswick during July, were over 6 per cent better than in the preceding month and nearly 22 per cent above the corresponding month of last year. There was an increase also in placements of nearly 7 per cent when compared with June and of over 21 per cent in comparison with July, 1936. The only decline of importance in placements from July of last year was in the highway division of construction and maintenance and the largest increases were in logging and services. Of the changes in other groups a small loss in manufacturing was offset by a gain in trade and minor increases only were reported in farming and transportation. Industrial divisions in which most of the placements were effected during the month were logging 243; construction and maintenance 176 and services 647, of which 503 were of household workers. Place-

ments in regular employment numbered 448 of men and 129 of women.

Quebec

Orders received at employment offices in the Province of Quebec during July called for nearly 6 per cent more workers than in the preceding month and nearly 85 per cent more than during the corresponding month of last year. There was an increase also in placements of nearly 14 per cent when compared with June and of nearly 95 per cent in comparison with July, 1936. With the exception of small declines in manufacturing, communication and trade, all industrial groups showed improvement in placements over July of last year. The large increase for the province as a whole, however, was almost entirely due to gains under construction and maintenance, of which the majority were in the highway division of that group. Placements by industrial groups included manufacturing 186; logging 501; farming 232; construction and maintenance 3,152 and services 2,321, of which 1,906 were of household workers. There were 4,300 men and 1,439 women placed in regular employment.

Ontario

There was a decrease of over 10 per cent in the number of positions offered through employment offices in Ontario during July, when compared with the preceding month, but an increase of over 20 per cent in comparison with the corresponding month of 1936. Placements declined over 8 per cent in comparison with June, but were nearly 19 per cent higher than in July of last year. Substantial gains in placements in farming, services and manufacturing over July, 1936, accounted for the large increase under this comparison for the province as a whole. Important advances were also reported in construction and maintenance, transportation and trade. The only noteworthy decline was in logging. Placements by industrial divisions included manufacturing 901; logging 972; farming 3,388; transportation 186; construction and maintenance 5,239; trade 277 and services 4,022, of which 2,495 were of household workers. During the month 9,781 men and 1,561 women were placed in regular employment.

Manitoba

The demand for workers, as indicated by orders received at employment offices in Manitoba during July, was nearly 132 per cent higher than in the preceding month and over 30 per cent above the corresponding month of last year. Placements also showed an increase of over 101 per cent in comparison with June and of nearly 39 per cent when compared with July, 1936. The gain in placements over July of last year was due to a substantial increase in relief placements in the highway division of construction and maintenance, as a large gain in logging was more than offset by a loss in farming. Of the small changes in all other groups, those showing loss predominated. Industrial divisions in which most of the placements were effected during the month were logging 372; farming 886; construction and maintenance 1,876 and services 554, of which 436 were of household workers. There were 3,113 men and 276 women placed in regular employment during the month.

Saskatchewan

During the month of July, orders received at employment offices in Saskatchewan called for nearly 40 per cent more workers than in the preceding month and nearly 12 per cent more than during the corresponding month of last year. Placements also showed an increase of nearly 43 per cent in comparison with June and of nearly 16 per cent when compared with July, 1936. As in Manitoba, relief work on highway construction accounted for the gain in placements over July of last year. This increase was largely offset by a reduction in farming. There was a decline also in services, but gains were reported in mining and logging. Placements by industrial divisions included farming 336; mining 107; construction and maintenance 1,772 and services 656, of which 433 were of household workers. During the month 1,929 men and 377 women were placed in regular employment.

Alberta

Opportunities for employment, as indicated by orders received at employment offices in Alberta during July, were 16 per cent better than in the preceding month, but nearly 11 per cent less favourable than during the corresponding month of last year. There was an increase in placements of over 15 per cent when compared with June, but a decrease of over 10 per cent in comparison with July, 1936. The only increase of importance in placements over July of last year was in the highway division of construction and maintenance. The gain in this group, however, was more than offset by declines in farming, logging and services. Small changes only were reported in all other groups. Industrial divisions in which most of the placements were effected during the month were farming 454; construction and maintenance 830 and services 486, of which 366 were of household workers. Placements in regular employment numbered 1,409 of men and 312 of women.

British Columbia

There was an increase of 32 per cent in the number of positions offered through employment offices in British Columbia during July, when compared with the preceding month and of over 53 per cent in comparison with the corresponding month of last year. Slightly higher percentages of gain were reported in placements under both comparisons. The improvement in placements over July, 1936, was mainly due to a large increase in the highway division of construction and maintenance, although bush placements were considerably higher. Smaller gains were also reported in farming and trade. There were moderate declines in mining and services and minor changes in all other groups. Placements by industrial divisions included manufacturing 91; logging 356; farming 370; construction and maintenance 2,765 and services 929, of which 541 were of household workers. During the month 1,541 men and 344 women were placed in regular employment.

Movement of Labour

During the month of July, 1937, the Offices of the Employment Service of Canada made 28,072 placements in regular employment, 14,048 of which were of persons for whom the employment found was outside the immediate district of the offices at which they were registered. Of the latter, 797 were granted the Employment Service reduced transportation rate, 637 travelling to centres within the same province as the despatching office and 160 to other provinces. The reduced transportation rate, which is 2.5 cents per mile with a minimum fare of $4.00, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec transfers at the reduced rate during July numbered 3 and were of bushmen despatched from Hull to the Pembroke zone. Offices in Ontario issued 539 certificates for reduced transportation during July, all to provincial centres. Of these, the Port Arthur office granted 367, of which 337 were to bush workers, 24 to construction employees, 3 to hotel employees, 2 to tractor operators and one to a mine labourer, proceeding to centres within the Port Arthur zone. For employment within their respective zones also, the Fort William office transferred 115 bush workers and the Sudbury office 39 bush workers. From North Bay 2 bushmen and one farm hand went to Timmins, one sawmill worker to Sudbury and one bushman within the North Bay zone. The North Bay zone was also the destination of 6 highway construction workers, and one stenographer travelling from Ottawa and of 4 bushmen conveyed from Toronto. The Hamilton office was instrumental in the despatch of 2 roofers to Windsor. In Manitoba 182 persons took advantage of the Employment Service reduced transportation rate during July, 25 of whom were destined to provincial situations and 157 to points outside the province. All of these travelled on certificates secured at the Winnipeg office. Within the province one hotel cook journeyed to Brandon, and 11 farm hands, 5 highway construction workers, 3 mine workers, 2 construction labourers, one carpenter, one line man and one sawmill labourer to various sections of the Winnipeg zone. Included in the transfers to other provinces were 144 bush workers, 3 cooks, one farm hand and one miner going to Port Arthur, 6 construction workers to Timmins, and one farm hand and one farm domestic to Estevan. The labour movement in Saskatchewan during July was provincial and comprised the transfer of 4 persons. Of these, 3 were teachers, 2 of whom were bound for North Battleford and one for Prince Albert, travelling on certificates granted by the Regina office. The one remaining was a farm hand shipped from Saskatoon to Yorkton. Benefiting by the Employment Service reduced transportation rate in Alberta during July 45 persons journeyed to centres within the province, all on certificates secured at Edmonton. Of these, 44 were destined to employment within the Edmonton zone, among whom were 16 mine workers, 6 sawmill workers, 5 oil refinery workers, 4 cooks, 3 labourers, 2 farm hands, 2 transportation employees, 2 building construction workers, one engineer, one teamster, one mill hand and one maid. In addition one sawmill worker went to Lethbridge. British Columbia offices effected the transfer of 24 persons during July to provincial employment. From Vancouver one sawmill engineer and one farm hand were despatched to Kamloops and 12 bushmen and 7 mine workers to points in the Vancouver zone. For employment within its own zone, the Prince Rupert office shipped 2 farm hands. The Penticton zone was the destination of one farm hand conveyed from Nelson.

Of the 797 persons who were transported at the Employment Service reduced rate during July, 245 travelled by the Canadian National Railways, 528 by the Canadian Pacific Railway, 18 by the Pacific Great Eastern Railway, 4 by the Temiskaming and Northern Ontario Railway and 2 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During July, 1937

The value of the building represented by the permits taken out in 58 cities during July stood at $5,397,422, a seasonal decline of $616,246 or 10·2 per cent as compared with the June, 1937, total of $6,013,668; however, there was an increase of $367,620 or 7·3 per cent in the more significant comparison with the July, 1936, aggregate of $5,029,802.

The value of the building authorized in the first seven months of the present year was $33,378,744; this was 42·9 per cent higher than the aggregate of $23,352,686 reported in the period January-July, 1936, being also decidedly greater than in the first seven months of any other year since 1931. The cumulative total for the January-July period in each of the last six years has been very much lower than in earlier years of the record, being also considerably less than the seventeen-year average of $71,456,383. While the wholesale prices of building materials have recently advanced, the index for the first seven months of 1937 was also below the average for the years since 1919.

Some 50 cities furnished detailed statistics for July, 1937, showing that they had issued about 400 permits for dwellings valued at nearly $1,400,000, and some 2,000 permits for other buildings estimated at over $3,300,000. In the preceding month, authority was given for the erection of some 500 dwellings and 2,600 other buildings, estimated to cost approximately $2,100,000 and $3,350,000, respectively.

As compared with June, 1937, there was an increase of $286,097 or 169·3 per cent in Nova Scotia, and of $27,984 or 37·5 per cent in Saskatchewan. The remaining provinces recorded declines, of which those of $385,688 or 29·6 per cent in Quebec, and $318,433 or 33·5 per cent in British Columbia were most pronounced.

Increases over July, 1936, were reported in Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and British Columbia. The largest actual gain was that of $519,092 or 23·1 per cent in Ontario, but that of $340,397 or 196·8 per cent in Nova Scotia was proportionately greater. In Quebec and Alberta there were declines of 47·1 per cent and 13·9 per cent, respectively.

Of the larger cities—Montreal, Toronto, Winnipeg and Vancouver—Montreal showed a decrease as compared with June, 1937, and also as compared with July, 1936. In Toronto, Winnipeg and Vancouver the totals were lower than in the preceding month, but higher than in the same month of last year.

Of the other centres, Halifax, New Glasgow, Sydney, Saint John, Quebec, Westmount, Belleville, Fort William, Galt, Kitchener, London, Oshawa, Port Arthur, St. Thomas, Windsor, Riverside, Brandon, St. Boniface, Regina, Saskatoon, Kamloops and North Vancouver showed gains over June, 1937, and also as compared with July, 1936.

The following table gives the value of the building authorized by 58 cities during July, and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the January-July total in 1926 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given (1926 average=100).

Year	Value of permits issued in July	Value of permits issued in first seven months	Indexes of value of permits issued in first seven months (1926=100)	Average indexes of wholesale prices of building materials in first seven months (1926 average=100)
	$	$		
1937.....	5,397,422	33,378,744	34·3	95·1
1936.....	5,029,802	23,352,686	24·0	84·5
1935.....	4,396,402	29,036,913	29·8	81·8

1930.....	15,824,781	101,238,766	103·9	94·2
1929.....	22,702,584	147,311,851	151·2	99·2
1928.....	25,761,956	127,798,943	131·2	96·2
1927.....	16,369,195	97,211,914	99·8	96·1
1926.....	18,683,415	97,443,834	100·0	100·8
1925.....	12,812,603	78,712,320	80·8	103·1
1924.....	11,681,196	72,355,350	74·3	109·8
1923.....	13,078,547	86,126,043	88·4	111·7
1922.....	15,740,810	87,022,484	89·3	108·3
1921.....	10,965,891	66,737,515	68·5	130·2
1920.....	13,743,045	75,497,755	77·5	144·2

The aggregate for the first seven months of this year, as already mentioned, was 42·9 per cent higher than in 1936, also exceeding that for the same period in any other year since 1931. The average index number of wholesale prices of building materials, though rather higher than in any of the years, 1930-1936, was lower than in preceding years since 1920.

The accompanying table gives the value of the building permits issued by 58 cities during June and July, 1937, and July, 1936; the 35 cities for which records are available since 1910 are marked thus "x".

[1] Report not received.

EMPLOYMENT CONDITIONS IN CANADA TO THE END OF AUGUST, 1937

Reports of the Superintendents of the Employment Service of Canada.

Haying in the Maritime Provinces was practically completed. The harvesting of grain had commenced in some districts and good crops are anticipated. Lumber operators are all busy and the outlook for the fall is very good. Rafting at the Miramichi booms has been held up owing to a strike. Pulp cutting continues. Fish catches were small in comparison with previous months and salmon is scarce. Shore fishermen were busy with the fall run of herring. Lobster fishing is good and sardines are still plentiful. Coal mines in the vicinity of New Glasgow worked from three to six days per week while those in Cape Breton, with the exception of one mine which was idle for four days, worked from four to six days. All manufacturing plants are operating at an average production or a little better except saw and planing mills in the Miramichi district, which are idle due to the strike. No new construction has been started but all work underway is progressing favourably. Passenger traffic by rail, boat and auto was very heavy, the number of foreign cars being greater than in previous years. Freight by rail and boat was light, the shipment of lumber and loading of vessels being held up by the strike along the waterfront at Chatham. There was a large movement of freight by road. Trade was good, both wholesale and retail. Numerous requests were received for domestic workers, all of which were not readily met owing to a scarcity of experienced applicants.

In the Province of Quebec there was an increased demand for farm workers at Sherbrooke, and several placements were effected by the Hull office. A decrease was reported from Montreal and little activity at other points. Many placements were made in logging, which was quite active, and a further expansion is anticipated. Mining conditions at Sherbrooke and Rouyn were favourable, but inactive in other centres. There has been no demand for textile workers at Montreal as a consequence of a strike which is now terminated. The boot and shoe industry was also

slack, but clothing was fairly active and good conditions prevailed in tobacco and cigar factories. Metals showed little activity especially in the railway shops. All industries at Sherbrooke were operating at about 90 per cent of their capacity, and at Quebec and Matane conditions were generally good. Pulp and paper mills at Arvida were operating on full time. If the anticipated re-opening of a mill at Chicoutimi should materialize unemployment would entirely disappear in that locality. New machinery is being installed at a paper mill at Port Alfred. There is considerable activity in Sherbrooke in connection with the construction of industrial, commercial and residential buildings. All tradesmen are at work which will continue until the winter. At Chicoutimi new building projects are underway, and highway construction is providing employment for large numbers of workers throughout the province. Transportation is light at Montreal, but there was an increase at Hull and Sherbrooke and fair activitv at Quebec. Port Alfred was quite busy. Many workers were placed in domestic service and in hotels and restaurants, but difficulty was experienced in filling all orders.

In Ontario harvest and tobacco hands continued to be in demand, with an adequate supply of applicants available. A fair number of monthly men were also placed, but some offices had difficulty in securing men with experience to fill all orders of this kind. Only a few calls were received for peach pickers as transients were securing the work available by personal application. Offices at the head of the lakes reported an increasing demand for bush workers, and many placements have been made. Large orders for pulpwood cutters had been received at Sault Ste. Marie, and logging was active at Timmins. Manufacturers generally continued to operate steadily, maintaining their staffs or making small additions except in the Land Vehicles Division of the iron and steel industry where seasonal slackness prevailed. Canning factories and packing plants were busy, the former making large staff additions. Rubber footwear showed improvement but there was some slackness in the tire divisions. Highly skilled mechanics in the metal trades were hard to obtain. There was a further expansion in building construction, and many placements were effected. In some localities skilled tradesmen are scarce. Road construction also continued to provide employment for large numbers of workers. Producing mines in the Sudbury district were operating at full capacity, but prospect properties remained quiet. There was a steady demand for experienced domestics but a shortage of capable applicants.

In Manitoba grain cutting was nearing completion, although some slight delay had been caused by rain and high winds. Threshing was general in most sections and there was a good demand for help, although it was not expected to last for any length of time. The harvest demand in Saskatchewan was very small, the employment offered of short duration and wages low. Few placements had been made through the employment offices in Alberta as large numbers of farmers from Western Saskatchewan were personally soliciting work at every point. Every district with good crops is crowded with help. There was a demand for river drivers at Edmonton and for sawmill hands at Calgary, but comparatively quiet conditions prevailed in other lumbering zones. There was little activity in Alberta coal mines and none of those operating had full crews. The strike at Western Gem Mine affected one hundred workers. Residential construction in Winnipeg and its vicinity was substantially in excess of last year, and activity was reported from Saskatoon, Calgary and Edmonton. Highway construction and street paving continued to absorb a large number of workers. The demand for town domestics was less than usual. A scarcity of maids for farm homes was reported by a few offices.

In British Columbia grain cutting and harvesting were progressing favourably except in odd localities where work had been held up by rain. Apple picking was in full swing in the Kamloops district, and a large crop is in prospect. The crop is light at Penticton but better than last year. Logging and lumbering generally showed very little change, although sawmills at Victoria and Prince George were quite busy. Loggers accustomed to coast methods of logging were none too plentiful, but there was a surplus of short log men, many of whom have come from the East. Reserve coal mines worked four days, and the Northfield mine five days per week. A provisional settlement of the strike at Dunsmuir had been reached, and the principle of the closed shop accepted. Gold properties are brisk, but there is no demand for help. The mines at Penticton are working steadily. Building construction was quite active except at Vancouver where wet weather had retarded work. There is no shortage of building tradesmen. Shipyards are busy at Victoria, also the waterfront trading lumber. Longshore work at New Westminster was quite good, but at Vancouver and Prince George was quiet. At the latter port activity continues on the waterfront. Trade was reported as fair from several centres and on the increase at Penticton where tourist camps are filled to capacity. Competent applicants for domestic work are scarce, but many positions at Victoria had been filled by new arrivals from the Prairie Provinces which local applicants were reluctant to accept.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

The *British Ministry of Labour Gazette*, August, 1937, summarized the employment situation as follows:—

Employment at July 26 remained at about the same general level as at June 21. It improved in the distributive trades, and in hotel and boarding house, road transport and shipping services. There was also a reduction in the numbers recorded as unemployed in the coal mining industry, the figures for which at June 21 were increased by stoppages in connection with the Yorkshire Mine Workers' Demonstration. On the other hand, employment declined in building and public works contracting, in the pottery, general engineering, motor vehicle, wool textile, clothing and boot and shoe industries, and in textile bleaching, printing, dyeing, etc. Owing to local holidays there was a marked increased in the numbers temporarily stopped in the jute industry and a slight increase in the numbers recorded as unemployed in iron and steel manufacture. There was also an increase in the numbers recorded as unemployed in agriculture.

It is estimated that at July 26, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,517,000. This was the same as at June 21, 1937, but 511,000 more than at July 20, 1936.

Among insured workpeople, aged 16-64 (excluding those within the agricultural scheme), the percentage unemployed in Great Britain and Northern Ireland at July 26, 1937 (including those temporarily stopped), was 10·4, as compared with 10·3 at June 21, 1937, and 12·4 at July 20, 1936. In Great Britain the percentage at July 26, 1937, was 10·1, as compared with 10·0 at June 21, 1937, and 12·2 at July 20, 1936.

At July 26, 1937, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,069,180 wholly unemployed, 246,615 temporarily stopped, and 63,664 normally in casual employment, making a total of 1,379,459. This was 22,861 more than a month before, but 272,613 less than a year before. The total was made up of 1,074,474 men, 40,392 boys, 221,400 women, and 43,193 girls. The number of boys and girls on the registers increased between June 21 and July 26, by 22,042, mainly owing to the registration of juveniles who had recently left school.

The total of 1,379,459 persons on the registers at July 26, 1937, included 622,151 persons with claims admitted for insurance benefit (of whom 3,109 had applications authorized for payment of unemployment allowances in supplementation of benefit), 46,512 claimants whose position under the conditions relating to contributions paid and benefit received had not been determined, and 4,643 persons disqualified for short periods from receiving benefit (of whom 1,631 had applications authorized for payment of unemployment allowances). There were also 552,022 persons (not included in any of the foregoing classes) with applications authorized for unemployment allowances, 846 persons with applications for unemployment allowances under consideration, and 153,285 other persons, of whom 41,690 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at July 26, 1937, was 1,445,328, as compared with 1,423,439 at June 21, 1937, and 1,717,062 at July 20, 1936.

United States

Employment in the industries covered regularly by the United States Bureau of Labor Statistics declined during July, the decrease being due largely to inventory taking, repairs and vacations, according to the monthly statement released by Frances Perkins, Secretary of Labor.

The following paragraphs have been extracted from the statement issued on August 26.

On the basis of reports received, it is estimated that approximately 50,000 fewer workers were employed in July in industries covered by the Bureau of Labor Statistics. Aggregate weekly pay-rolls decreased by $4,700,000. Comparisons with July of last year show an increase of nearly 1,300,000 workers and a gain of nearly $65,000,000 in weekly wage disbursements.

July is normally a month of decreased business activity, seasonal recessions in employment usually occurring in retail trade, year-round hotels, dyeing and cleaning, anthracite mining, and manufacturing industries. Employment in the manufacturing industries in July, 1937, however, showed a contraseasonal gain. This was true in both the durable and non-durable goods groups of manufacturing industries. Employment increased 0·8 per cent in the non-durable goods group, and 0·4 per cent in the durable goods group. In the non-durable goods group, the gain was due primarily to seasonal expansions in the food industries, while in the durable goods group the gain was due chiefly to a sharp rise in the iron and steel products group. Employment in the durable goods group in July, 1937,

was 17·3 per cent higher than in July, 1936. In the non-durable goods group a gain of 6·2 per cent was shown over the year interval. The July, 1937, employment index for the non-durable goods group (104·3) indicates that for every 1,000 wage-earners employed during the base period (1923-25), 1,043 were employed in July, 1937, while the July index of employment for the durable goods group (99·2) indicates 992 wage-earners were employed in this group in July, 1937, compared with each 1,000 employed in the years 1923-24-25.

Gains in factory employment from June to July have been shown in 5 of the preceding 18 years for which information is available and pay-rolls have declined in all but two of these years.

The gain of 0·6 per cent in factory employment between June and July represented the employment of approximately 51,000 additional wage-earners and raised the July employment index (101·7) to above the level of any month since November, 1929, with the exceptions of the months of April and May, 1937.

The net decline of approximately 100,000 workers between June and July in the combined 16 non-manufacturing industries surveyed was due largely to the seasonal recessions of 3·1 per cent or approximately 110,000 employees in retail trade establishments of the country. The major portion of this decrease was in the general merchandising group (department, variety, and general merchandising stores and mail-order houses) which reported 7·2 per cent fewer workers. Employment in other lines of retail trade decreased 1·8 per per cent over the month interval. Seasonal curtailments in employment were also shown in anthracite mining (12 per cent) and in dyeing and cleaning (7 per cent). Brokerage firms reported a decline of 1·6 per cent in number of workers, and year-round hotels reported a seasonal decrease of 1 per cent. In the remaining two industries reporting decreased employment (bituminous coal mining and wholesale trade), the decreases were 0·2 per cent and 0·4 per cent, respectively.

Reports received from 9,320 contractors engaged in private building construction showed a 3·3 per cent gain in employment between June and July. Metal mines continued to expand their working forces, the gain of 2·9 per cent raising the July employment level above that of any month since June, 1930. Each of the three branches of public utilities surveyed reported employment gains; electric light and power and manufactured gas companies reporting a gain of 1·8 per cent; telephone and telegraph companies, 1·5 per cent; and electric-railroad and motor-bus operation and maintenance companies, 0·2 per cent. Laundries reported a seasonal expansion of 1·6 per cent and crude petroleum producing companies increased their forces 1·2 per cent. Insurance firms reported a gain of 0·3 per cent and quarrying and non-metallic mines also reported a slight gain (0·1 per cent).

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, Remodelling, Repair etc.)

Construction of an Artillery Proof Stop Butt at the Dominion Arsenal, Valcartier, P.Q. Name of contractors, Canadian Construction Ltd., Quebec, P.Q. Date of contract, August 4, 1937. Amount of contract, $36,470. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Blacksmiths	$0 60	8	44
Blacksmiths' helpers	0 45	8	44
Carpenters	0 60	8	44
Cement and concrete mixer operator (steam)	0 60	8	44
Cement and concrete mixer operator (gas. or electric)	0 50	8	44
Cement finisher	0 55	8	44
Compressor operators (gas. or electric)	0 50	8	44
Driver	0 40	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 65	8	44
Engineers, operating, steam—single or double drums	0 60	8	44
Engineers, operating, steam—three or more drums	0 70	8	44
Firemen, stationary	0 45	8	44
Hoist operators (gas. or electric)	0 50	8	44
Labourers	0 40	8	44
Machinists	0 65	8	44
Motor truck driver	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
Painters and glaziers	0 55	8	44
Rodmen, reinforced steel	0 50	8	44
Shovel operators (gas.)	0 85	8	44
Steam shovel cranemen	0 65	8	44
Steam shovel engineers	0 85	8	44
Steam shovel firemen	0 55	8	44
Structural steel workers	0 75	8	44
Watchmen	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Installation of kitchen equipment in the Single Officers' Building at the Royal Canadian Air Force Station, Trenton, Ont. Name of contractors, the Wrought Iron Range Co., Ltd., Toronto, Ont. Date of contract, August 12, 1937. Amount of contract, $6,774. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Plumbers and steamfitters	$0 75	8	44
Sheet metal workers	0 70	8	44
Electricians (inside wiremen)	0 70	8	44
Labourers	0 40	8	44
Painters and glaziers	0 60	8	44
Painters (spray)	0 70	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a terrace of 4 Married Quarters at the Royal Canadian Corps of Signals Depot, Barriefield, Ont. Name of contractors, Frontenac Construction Co., Ltd., Toronto, Ontario. Date of contract, August 5, 1937. Amount of contract, $31,790. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos insulation workers	$0 70	8	44
Blacksmiths	0 65	8	44
Blacksmiths' helpers	0 45	8	44
Brick and hollow tile layers	0 95	8	44
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45	8	44
Carpenters	0 80	8	44
Cement finishers	0 95	8	44
Operator, cement and concrete mixer (steam)	0 65	8	44
Operator, cement and concrete mixer (gas. and electric)	0 50	8	44
Compressor operator (gas. and electric)	0 50	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Driver	0 40	8	44
Engineer on steel erection	0 80	8	44
Engineer, operator steam—			
1 or 2 drums	0 65	8	44
3 or more drums	0 75	8	44
Hoist operator (gas. or electric)	0 50	8	44
Electricians (inside wiremen)	0 70	8	44
Fireman—stationary	0 45	8	44
Labourers	0 40	8	44
Lathers, metal and wood	0 70	8	44
Machinists	0 70	8	44
Motor truck driver	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Ornamental iron workers	0 60	8	44
Painters and glaziers	0 70	8	44
Plasterers	0 95	8	44
Plasterers' helpers (tempering and mixing material)	0 45	8	44
Plumbers and steamfitters	0 80	8	44
Roofers, felt and gravel and patent	0 45	8	44
Rodmen—reinforced steel	0 50	8	44
Sheet metal workers	0 70	8	44
Shovel operators (gas.)	0 90	8	44
Steam shovel engineers	0 90	8	44
Steam shovel cranemen	0 70	8	44
Steam shovel firemen	0 55	8	44
Steam shovel oilers	0 50	8	44
Stonecutters	0 95	8	44
Structural steel workers	0 80	8	44
Tile-setters—ornamental	0 95	8	44
Tilesetters' helpers (all men assigned to help tradesmen)	0 45	8	44
Watchman	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Installation of kitchen equipment in the Administration Building at St. Johns, P.Q. Name of contractors, Messrs. LeSieur & Frere, St. Johns, P.Q. Date of contract, August 3, 1937. Amount of contract, $5,998.93. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Plumbers and steamfitters	$0 60	8	44
Sheet metal workers	0 60	8	44
Electricians	0 60	8	44
Labourers	0 35	8	44
Painters	0 50	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of Barrack Block No. 2, R.C.A.F. Station, Trenton, Ont. Name of contractors, H. Dagenais, Ltd., Ottawa, Ont. Date of contract, August 13, 1937. Amount of contract, $133,900. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week

Construction of five 80-ft. and four 40-ft. steel pontoons for Dredge P.W.D. No. 5. Name of contractors, Manseau Shipyards Ltd., Sorel, P.Q. Date of contract, August 11, 1937. Amount of contract, $22,925. A fair wages schedule was inserted in this contract as follows:—

All workmen, labourers or other persons who perform labour on the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged. In no event shall the wages be less than those set out in the schedule of minimum rates hereunder. The working hours shall not exceed eight a day unless, for the protection of life or property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required.

Trade or class of labour	Minimum rates of wages	Maximum hours
	per hour	
Angle-smith	$0 58	8 hours a day for all classes
Angle-smith's helper	0 45	
Blacksmith	0 58	
Blacksmith's helper	0 40	
Boilermaker	0 58

Roofers, felt and gravel	0 45	8	44
Sheet metal workers	0 70	8	44
Stonecutters	0 90	8	44
Structural steel workers	0 80	8	44
Driver, team and wagon	0 75	8	44
Driver	0 40	8	44
Terrazzo layers	0 75	8	44
Terrazzo finishers and helpers	0 60	8	44
Terrazzo labourers	0 45	8	44
Watchman	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from paying higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Contracts in Group "B" (Manufacture of Equipment and Supplies)

The following is a statement of contracts awarded by the Royal Canadian Mounted Police during the month of August, 1937, for various classes of equipment and supplies, all

of which were subject to the "B" labour conditions of the Fair Wages Order in Council above referred to:—

Nature of contract	Contractor
Fur caps	Jay Wolfe, Inc., Montreal, P.Q.
Black ankle boots	The Hartt Boot & Shoe Co., Ltd., Fredericton, N.B.
Yellow worsted cavalry braid	Belding-Corticelli Ltd., Montreal, P.Q.

Personnel of Quebec Fair Wage Board

The new Quebec Fair Wage Act, which repeals the Women's Minimum Wage Act, was reviewed in the LABOUR GAZETTE for July, page 748. The legislation provided for administration by a board of five members and became effective on September 1. Recently the Hon. Maurice Duplessis, premier of the Province, announced the appointment of a board of four members as follows:

Judge Ferdinand Roy, of Quebec City, chief district magistrate at Quebec and dean of the law faculty of Laval University;

C. H. Cheasley, Montreal, importer and manufacturers' agent;

George Cromp, Montreal, previously inspector of the former minimum wage commission;

Thomas Aubry, Three Rivers, glove worker and president of the National Catholic Syndicates of Three Rivers.

Mr. Omer Langlois, journalist, of Montreal, is secretary.

Safety Measures in Britain

A Memorandum on Precautions in the Handling, Storage and Use of Liquid Chlorine has been issued by the Factory Department of the British Home Office. Liquid chlorine is supplied in cylinders, drums or tank wagons for use in the manufacture of chemicals and in other industries. As the gas produces irritation and suffocation, certain definite precautions are recommended for use in factories in which liquid chlorine is used or stored. These recommendations supplement regulations laid down in 1922 for chemical works using chlorine and include information as to first-aid treatment.

Accidents in Woodworking Plants in Quebec

An increase of 44·7 per cent in the number of accidents for the first seven months of 1937 over last year is reported in the wood-working section of the Quebec Association for the Prevention of Industrial Accidents, and a letter has been issued to the members by the general manager, Lt. Col Arthur Gaboury, asking for a more intensive effort to combat this increase.

Each of the five groups comprising Class 4 shows an increase in the figures for this year with one fatality being reported. Planing mills and sash and door manufactures show the biggest increase, the total number of accidents in this group for the seven-month period being 174. The entire class shows a total of 408 accidents this year to July 31, while for the same period last year there were 282 accidents.

A summary of child labour legislation in the United States in 1937, which appears in the August issue of *The Child* (official publication of the Children's Bureau of the U.S. Department of Labour) indicates a continuation of the upward trend in state child-labour standards, which was stimulated by the National Minimum Standards temporarily set under the N.R.A. codes. Wisconsin passed legislation intended to curb some of the disadvantages to newspaper carriers and sellers inherent in the so-called "little-merchant system" used by publishers and news agencies in the distribution and sale of newspapers and magazines. North Carolina entirely revised its child-labour law, adopting standards which place it among the States with the best child-labour laws. A number of other States improved age and hour standards. In some instances this legislation regulating hours of work marks the first provision covering both boys and girls 16 and 17 years of age to be enacted in the State.

A system of apprenticeship will be established in wholesale and retail trades in Manitoba, beginning September 15, according to a recent press report which indicated that the provincial minimum wage Board had accepted the apprenticeship recommendations of the Retatil Merchants Association.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

TORONTO, ONTARIO.—CERTAIN DAILY NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PHOTO ENGRAVERS UNION, LOCAL NO. 35.

Agreement to be in effect from June 1, 1937, to April 30, 1939, and thereafter from year to year, subject to notice.

Only union members to be employed, if available. If none available, any others employed must join the union. The foreman must also be a union member.

Hours: 40 per week for day work, 37½ for night work, with a 5-day week.

Overtime: time an one half. Work on Sundays and eight specified holidays (except when part of regular shift), double time. No journeyman may work more than 24 hours overtime in any four week period when there are competent men available except in cases of emergency or make-overs.

Minimum wages: journeymen photo engravers $52.50 per week for day work and $57.50 for night work until May 1, 1938; from May 1, 1938, $55 for day work and $60 for night work.

Apprentices to serve an apprenticeship of not less than five years in one shop, one apprentice allowed to each five journeymen employed on the day force. After five years apprenticeship, the employer has the privilege of advancing the apprentice to the minimum journeyman's wages in three six month stages, the increase for each six months being $5 per week.

Minimum wages for apprentices: from $8 per week during first year to $35 during last half of fifth year.

A joint industrial council consisting of two representatives selected by the employer or employers and two representatives of the union shall be formed for the adjustment and decision on all matters involving the application of the agreement. If they cannot agree, they will select a fifth member and the majority decision of these five will be final and binding. This arbitration does not apply in settlement of any dispute over a new agreement.

TORONTO, ONTARIO.—EMPLOYING PHOTO ENGRAVERS (COMMERCIAL SHOPS) AND THE INTERNATIONAL PHOTO ENGRAVERS' UNION, LOCAL NO. 35.

Agreement to be in effect from June 1, 1937 to April 30, 1939 and thereafter from year to year, subject to notice.

Only union members to be employed, if available. If not available, others employed must join the union. Foremen must also be union members.

Hours: 8 per day, 5 days per week, a 40 hour week for day work. Night work only to be done in exceptional cases, with a 37½ hour week in 5 nights.

Overtime: time and one half for first four hours, double time after four hours. Work on Sundays and eight specified holidays, double time.

Minimum wages: journeymen $52.50 per week until May 1, 1938, when it will be increased to $55. For night work, $5 per week over the regular rate.

If necessary to lay-off men, no employee will be laid off for more than one day a week.

Apprentices to serve at least five years in one shop. One apprentice allowed to each five journeymen on the day shift.

Wages for apprentices: from $8 per week for first year to $35 during last half of fifth year. After the five years apprenticeship, the employer has the privilege of advancing the apprentice to the minimum journeyman's wage in three six month stages with an increase of $5 per week for each six months.

All disputes will be referred to a joint arbitration committee. If they cannot agree they will choose a disinterested party and the decision of this whole committee will be binding on both parties.

Construction: Building and Structures

TORONTO, ONTARIO.—GENERAL CONTRACTORS' SECTION OF THE BUILDERS' EXCHANGE AND CONSTRUCTION ASSOCIATION AND THE TORONTO AND DISTRICT COUNCIL OF CARPENTERS AND MILLMEN, UNITED BROTHERHOOD OF CARPENTERS AND JOINERS.

Agreement to be in effect from August 19, 1937, to March 1, 1939, and thereafter from year to year subject to notice.

The business agents of the union to have access to all jobs during working hours but their visits must not interfere with the progress of the work.

Hours: 8 per day, 5 days per week, a 40-hour week. Where shift work is done, time and one-seventh to be paid for second or third shift.

Overtime: time and one-half. Work on Saturdays, Sundays and eight specified holidays, double time, with the exception that when carpenters are required on Saturdays for the pouring of concrete, they will be paid straight time for the morning and time and one-half after noon.

Minimum wages for journeymen carpenters: 85 cents per hour from September 1, 1937, to February 28, 1938; 95 cents per hour from March 1, 1938 to March 1, 1939. (The former rate was 80 cents.)

A joint arbitration committee to be formed for the settlement of disputes, their decisions to be final and binding. No strike or lockout to occur pending the decision of this committee. No sympathetic strike to occur except under the direct authority of the executive board of the international headquarters of the union.

WINNIPEG, MANITOBA.—GENERAL CONTRACTORS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE BRICKLAYERS AND MASONS INTERNATIONAL UNION NO. 1 OF MANITOBA.

Agreement to be in effect from May 1, 1937, to April 30, 1938.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1936, page 657 with these exceptions:

Hours: during July and August, there will be no work on Saturday making a 40-hour week in these months.

Minimum wages for journeymen bricklayers and masons be increased from $1 to $1.05 per hour from May 1 to August 31, 1937, and to $1.10 from September 1, 1937, to April 30, 1938.

WINNIPEG, MANITOBA.—MARBLE AND TILE SECTION OF THE WINNIPEG BUILDERS EXCHANGE AND THE BRICKLAYERS' AND MASONS' INTERNATIONAL, UNION NO. 1 OF MANITOBA.

Agreement to be in effect from May 1, 1937, to April 30, 1938.

The agreement is similar to the one noted above for bricklayers and masons, with certain exceptions:

Minimum wage rate is $1 per hour for journeymen marble, mosaic and tile setters from May 1, 1937, to August 31, and $1.05 from September 1, 1937, to April 30, 1938.

Men hired in Winnipeg and sent out of the city shall have their transportation paid and 15 cents per hour extra to the regular wage rate to cover cost of board, etc.

Both parties agree that all workmen may work for whomever they choose and all employers may employ and discharge whomever they choose.

REGINA, SASK.—ELECTRICAL CONTRACTORS OF REGINA AND THE UNION OF INSIDE ELECTRICAL WORKERS, REGINA LOCAL.

Agreement to be in effect from March 1, 1937, to March 31, 1938. Both parties agree to meet in February to formulate a new agreement.

Only union members to be employed, and union members will not work for any contractor who is not party to this agreement.

Hours: 8 per day, 4 on Saturdays, a 44-hour week except that contractors may have one man working Saturday afternoons at regular rates. On shift work, an 8-hour shift, a 48-hour week.

Overtime and work on Sundays and eight specified holidays, time and one-half.

Wages: journeyman wireman 80 cents per hour.

Not more than one apprentice allowed to each journeyman, apprentices to serve four years.

Wages for apprentices from 30 cents per hour during first year to 60 cents during fourth year.

For work out of city, transportation, travelling time and board for the first two weeks to be paid by the employer.

A joint conference board to be formed for the settlement of disputes.

Transportation and Public Utilities: Street and Electric Railways

QUEBEC, P.Q.—THE QUEBEC RAILWAY, LIGHT AND POWER COMPANY AND LA FRATERNITÉ NATIONALE ET CATHOLIQUE DES EMPLOYÉS DES TRAMWAYS DE QUÉBEC, INCORPORÉE (NATIONAL CATHOLIC BROTHERHOOD OF TRAMWAY EMPLOYEES OF QUEBEC, INCORPORATED).

Agreement to be in effect from July 1, 1937 to December 31, 1937. On giving 90 days' notice either party may discontinue the agreement for the purpose of revision.

The Company agrees to recognize the union and only to engage conductors and motormen who are members of this union and to give preference to members of the union in hiring bus drivers for any bus service that may be established.

Hours: overtime rates to be paid after 10 hours, no employee to be obliged to work more than 6 hours consecutively.

Overtime: all work over 10 hours in a day, 2 cents per hour extra.

Wages per hour for motormen and conductors: on two-man cars—first year 38 cents, second year 43 cents, third, fourth and fifth year 45 cents, after five years 48 cents; on one-man cars 5 cents per hour extra. (These are increases of 2 cents per hour over the 1936 rates.)

All disputes as to dismissals, suspensions and working conditions shall be submitted to a joint committee.

Workmen's Wages Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Orders in Council and are noted in the next article of this issue:

Shoe Repairers, Victoriaville
Bakers, Sorel
Barbers and Hairdressers, St. Hyacinthe (Amendment)
Granite, Marble and Stone Cutters, Province of Quebec (Amendment)
Building Trades, Montreal and Hull (Amendment)

Industrial Standards Act of Ontario

The following schedules have recently been made binding by Orders in Council and are noted in the article beginning on page 1035:

Barbers, Cornwall
Barbers, North Bay
Barbers, Kingston
Barbers, Stratford
Barbers, Niagara Falls.
Barbers, St. Catharines.

Industrial Standards Act of Saskatchewan

The following schedules have recently been made binding by Orders in Council and are noted on the article beginning on page 1037:

Carpenters, Moose Jaw
Barbers, Moose Jaw
Barbers, Regina
Electrical workers, Regina.

Industrial Standards Act of Alberta

The following schedule has recently been made binding by an Order in Council and is noted on page 1038:

Creosote workers, Calgary
Lathers, Edmonton (Amendment).

WORKMEN'S WAGES ACT, QUEBEC

Agreements Recently made Obligatory and other Proceedings

AN Act respecting Workmen's Wages which was summarized in the July issue of the Labour Gazette, page 745, replaces the Collective Labour Agreements Extension Act but stipulates that the agreements and regulations made under the former Act continue in effect for the period for which they were made. Under the Workmen's Wages Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant Governor in Council through the provincial Minister of Labour to have those terms of such agreement which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published, and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette*. The agreement may be amended through the same procedure. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette*, the committee is constituted a corporation. A joint committee may require certificates of competency from workmen within the scope of the agreement if in towns of 5,000 or more, and such by-law must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the Labour Gazette from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act are noted in the issues beginning July 1937.

Recent proceedings under this Act include the extension by Orders in Council of agreements affecting shoe repairers at Victoriaville and bakers at Sorel, the amendment by Orders in Council of the agreements affecting barbers and hairdressers at St. Hyacinthe, granite cutters throughout the province and building trades at Hull, all summarized below. Requests for the extension of the agreement affecting horseshoers and wheelwrights at Victoriaville and a request for an amendment to the agreement affecting building trades at Quebec was published in the *Quebec Official Gazette*, August 28. The approval of the constitution and by-laws of the joint committee in the barbering and hairdressing trade at Montreal is also noted in the same issue.

Shoe repairers, Victoriaville.—An Order in Council approved August 14 and published in the *Quebec Official Gazette*, August 28, makes obligatory the terms of an agreement between Le Syndicat National des Maîtres-Cordonniers de Victoriaville (The National Union of Master Shoemakers of Victoriaville) and Le Syndicat National des Employés-Cordonniers de Victoriaville (The National Union of Employed Shoemakers of Victoriaville).

The Agreement is in effect from August 28, 1937, to August 27, 1938 and thereafter from year to year subject to notice.

The territorial jurisdiction includes Victoriaville and within a radius of 20 miles of its limits.

The hours are to be as determined by the municipal by-laws already in force in the Municipality where each shop is situated. The joint committee has power to order shops closed at the end of such working hours.

Minimum Wages: from April 1 to November 30, experienced workers $12 per week except finishers for whom the minimum is $10; from December 1 to March 31, experienced workmen $8, experienced finisher $7.50.

Apprentices to serve three years.

Minimum weekly wages for apprentices: first year $4.50, second year $6.50, third year $8 except from December 1 to March 31 when for apprentices in their third year the minimum is $7 and for apprentice finishers $6.

In addition to experienced workmen and apprentices in the industry, there is the class "artisans" who own, operate or supervise a shop, but only one artisan to each repair shop.

A schedule of minimum prices which must be charged for each piece of work is included in the agreement.

A joint committee to be formed as provided in the Act which shall have power to grant certificates stating to which class a worker belongs.

Bakers, Sorel.—An Order in Council approved August 14 and published in the *Quebec Official Gazette*, August 28, makes obligatory the terms of an agreement between certain bakery proprietors and Le Syndicat National

et Catholique des employés boulangers et pâtissiers de Sorel, Incorporé (The National Catholic Union of Employed Bakers and Pastry makers of Sorel, Incorporated).

The agreement is in effect from August 28, 1937 to August 27, 1938 and thereafter from year to year subject to notice.

The territorial jurisdiction includes the town of Sorel and the village of St. Joseph of Sorel, but bakeries outside this territory who sell all or part of their production within it are also governed by the Order in Council.

Hours for inside employees of bakeries: 60 per week. All work to be done during the day. No work on church holy days.

Overtime: for inside employees of bakeries; time and one half.

Wages: man in charge of bread and pastry $18 per week; journeymen bakers and pastry makers $12; salesmen $12, helper-salesmen $6. Any employee working on an hourly basis to be paid 45 cents per hour. Weekly wages for bakers and pastry makers' apprentices: first year $6, second year $8, third year $12. Wages higher than the above scale are not to be reduced while the agreement is in effect.

BARBERS AND HAIRDRESSERS, ST. HYACINTHE, GRANBY, DRUMMONDVILLE AND SOREL.—An Order in Council, approved August 14, and published in the *Quebec Official Gazette* August 28, amends the previous Order in Council for this industry (LABOUR GAZETTE July, 1935, page 631, October, page 954, March, 1936, page 275 and January, 1937, page 105).

Hours: a rearrangement of hours results in an additional hour's work per week in Drummondville and Granby.

Minimum wages: The minimum weekly wage for male barbers and hairdressers at St. Hyacinthe, and Granby is $13 plus 50 per cent of receipts over $18, at Sorel $12 per week. One year after the agreement is in force the rates at these three places are to be increased to $14 per week plus 50 per cent of receipts over $20. At Drummondville the minimum rate is increased to $15 plus 50 per cent of receipts over $22. The rates for female hairdressers are unchanged.

GRANITE, MARBLE AND STONE CUTTERS, PROVINCE OF QUEBEC.—An Order in Council, approved August 14 and published in the *Quebec Official Gazette*, August 28, amends the Order in Council governing granite cutters (LABOUR GAZETTE, June, 1937, page 694) by including the marble and stone-cutting industries and adding to the parties to the original agreement certain owners of marble and terrazzo plants and owners of quarries and cut stone plants operating in limestone, standstone, artificial stone and all other stone other than granite and marble and the following unions: the Journeymen Stone Cutters Association of North America, the branches of La Federation Nationale Catholique des Métiers du Bâtiment (The National Catholic Federation of Building Trades) comprising le Syndicat des Tailleurs de Pierre de Montréal (The Stone Cutters Union of Montreal), le Syndicat National Catholique des Briqueteurs—Maçons et Tailleurs de Pierre du Canada, section No. 1, Quebec (The National Catholic Union of Bricklayers, Masons and Stone Cutters of Canada, section No. 1, Quebec), l'Union Nationale Catholique des Tailleurs de Pierre des Trois-Rivières (The National Catholic Union of Stone Cutters of Three Rivers), le Syndicat Catholique des Travailleurs aux Carrières de St-Marc des Carrières (The Catholic Union of Quarry Workers of St. Marc des Carrieres) and le Syndicat National Catholique aux Carrières de Frontenac (The National Catholic Union of Quarry Workers of Frontenac).

Hours: marble cutters, apprentice marble cutters, stone cutters and apprentice stone cutters, 8 per day, 4 on Saturdays, a 44-hour week; all other classes of work 10 per day, 5 on Saturdays, a 55-hour week.

Overtime: time and one-quarter.

Wages per hour in marble industry: marble cutters 60 cents; apprentice marble cutters 20 cents during first year, 25 cents during second year, 35 cents during third year and 50 cents during fourth year; carborundum machine operators (large or small) 50 cents; apprentice carborundum machine operators—first six months 35 cents, second six months 40 cents, third six months 45 cents; compressor men 35 cents, saw setters 35 cents, helpers 30 cents, millwrights 40 cents, sawyermen on gang saws 40 cents, bed rubber face 45 cents, bed rubber end 35 cents, machine polishers (marble and terrazzo) 40 cents, hand polishers and boxers 35 cents, terrazzo casters 55 cents, cranemen 40 cents.

Wages per hour in stone industry: stone cutters 60 cents, apprentice stone cutters—first year 20 cents, second year 25 cents, third year 35 cents, fourth year 50 cents; planermen 45 cents; apprentice planermen—first nine months 35 cents, second nine months 40 cents; carborundum machine operators 40 cents; stone turners 45 cents; sawyermen including gang saw operators 40 cents, cranemen 40 cents, helpers 30 cents, blacksmiths 50 cents.

Handicapped workers may be employed at less than these minimum rates, but not more than one such worker for each ten normal workers employed and the joint committee will determine the percentage of incapacity.

Apprentices: in the marble cutting and stone cutting trade the apprenticeship is for four years; carborundum machine operators (marble industry) and planermen (stone industry) the apprenticeship is 18 months. In the marble industry not more than one apprentice to five journeymen except carborundum machine operators for whom one apprentice is allowed for each three journeymen. In the stone cutting industry, one apprentice allowed to each eight journeymen except for planermen for whom one apprentice is allowed for each three planermen.

BUILDING TRADES, MONTREAL AND HULL.—An Order in Council, approved August 14 and published in the *Quebec Official Gazette* August 28, amends the previous Order in Council (LABOUR GAZETTE, June, page 693) by including the following as parties to the agreement: certain general contractors of the district of Hull and le Conseil des Métiers de

la Construction du district d'Ottawa, Incorporé (The Building Trades Council of the Ottawa district, Incorporated), l'Union Nationale Catholique des Menuisieurs—Charpentiers du diocèse d'Ottawa, Incorporée (The National Catholic Union of Carpenters and Joiners of the diocese of Ottawa), l'Union Nationale Catholique des Manoeuvres du diocèse d'Ottawa, Incorporée (The National Catholic Union of Labourers of the diocese of Ottawa, Incorporated), l'Union Nationale Catholique des Briqueteurs—Maçons du diocèse d'Ottawa, Incorporée (The National Catholic Union of Bricklayers and Masons of the diocese of Ottawa, Incorporated), l'Association des Plâtriers du district d'Ottawa, Incorporée. (The Association of Plasterers of the district of Ottawa, Incorporated) and l'Association des Peintres et Electriciens du district d'Ottawa (The Association of Painters and Electricians of the district of Ottawa).

The territorial jurisdiction is extended to include the counties of Hull, Gatineau, Pontiac, Labelle and Papineau, but it is provided that the parties to the agreement in these counties may withdraw from it 30 days after publication of notice of withdrawal in the *Quebec Official Gazette.*

Hours are the same as in the Montreal district except that labourers may work 9 hours per day but not more than 48 per week. Shift work is allowed provided each shift works 7 hours or more.

Overtime: time and one-half to midnight; double time thereafter.

Work on Sundays, seven specified holidays and church holy days, double time.

Wages per hour in municipalities in the counties of Hull, Gatineau, Pontiac, Labelle and Papineau which have a population of 5,000 or more and in any municipality on work expected to amount to $10,000 including materials and wages: bricklayers and masons 90 cents, plasterers and electricians 70 cents; carpenters and joiners, stationary enginemen and mechanics and painters 65 cents, drillers 50 cents; celanite mixers, mortor makers, plaster pourers and hod carriers 45 cents, labourers 40 cents. Wages for apprentice painters from $1 per day for first six months to $4.50 per day during eighth six months; wages for apprentice electricians from $1 per day for first six months to $5.50 during tenth six months. Wages for permanently employed maintenance men: $22 per week for journeymen and $17 for labourers.

Wages per hour in municipalities in the counties of Hull, Gatineau, Pontiac, Labelle and Papineau with a population of less than 5,000 and on contracts of less than $10,000: bricklayers, masons and plasterers 60 cents, carpenters and joiners and painters 50 cents, celanite mixers, mortar makers, plaster pourers, hod carriers and drillers 35 cents, labourers 30 cents; apprentice painters from $1 per day during first six months to $3.50 during fourth year; apprentice electricians from $1 per day for first six months to $4 per day during fifth year. Wages for maintenance men: $20 per week for journeymen and $15 for labourers.

A sub-joint committee will be formed to ensure the enforcement of this agreement in these counties.

Joint Committee.—The constitution and by-laws of the joint committee set up under the following agreement were approved by Order in Council and published in the August 28 issue of the *Quebec Official Gazette.*

Barbers and Hairdressers, Montreal.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the Labour Gazette, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council, may declare such schedule to be in force "during pleasure" or for a period not exceeding twelve months stipulated in the schedule and thereupon such schedule shall be binding upon every employee and employer in such industry in the whole or any part of the province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette.* The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the Labour Gazette, summaries are given in this article of the schedules which have thus been approved.

Barbers, Cornwall.—An Order in Council, dated August 23 and published in *The Ontario Gazette,* August 28, makes binding a schedule of wages and hours governing the barbering trade in the town of Cornwall and adjacent urban area.

The schedule is in effect from September 7, 1937, "during pleasure."

Hours: the regular working period for all employers and employees shall be the hours during which barber shops are permitted to be open by municipal by-laws of the town of Cornwall. No work on Sundays, eight specified holidays nor after noon on Wednesday except Wednesday of the week in which any one of the specified holidays occurs.

Minimum Wages: persons on full time employment at a straight salary, $18 per week; those on full time employment on a percentage basis, $12.50 per week plus 50 per cent of proceeds in excess of $19 from the work of the employee plus an additional 10 per cent of such proceeds in excess of $30; persons on part time work or casual employment—those working nights and Saturdays, that is for four hours per day or less Monday to Friday and all day or less on Saturday, $7.50 per week plus 50 per cent of proceeds in excess of $12.50; those working on Saturdays or the day before a holiday and on the previous evening only $5 per week plus 50 per cent of the proceeds in excess of $7.50; those employed only on Saturday or the day before a holiday, $4 per day or part thereof plus 50 per cent of the proceeds in excess of $6 from the work of the employee; those working on days other than Saturday or the day before a holiday, $2.50 per day or part thereof plus 50 per cent of the proceeds in excess of $4 from the work of the employee.

No deduction of any kind shall be made from the minimum wages for materials supplied, laundry service or operating expenses of any kind.

A schedule of minimum charges for each operation in the barbering trade is included, and no lower prices may be accepted, nor operations combined nor premiums given customers without charging for the full price.

The Advisory Committee to be appointed is authorized to exercise all the powers that may be conferred upon an advisory committee for this industry.

BARBERS, NORTH BAY.—An Order in Council dated August 23 and published in *The Ontario Gazette*, August 28, makes binding the terms of a schedule governing the barbering industry in the city of North Bay.

The schedule is in effect from September 7, 1937, "during pleasure."

The schedule is similar to that noted above for Cornwall, with these exceptions:

Minimum Wages: those employed full time on a straight salary, $25 per week; those employed full time on a percentage basis, $18 per week plus 50 per cent of proceeds in excess of $25 and an additional 5 per cent on proceeds in excess of $40; those employed nights and Saturdays, $10 per week plus 50 per cent of proceeds in excess of $15; those employed on Saturdays and the day before a holiday and on previous evening only, $7 per week plus 50 per cent of proceeds in excess of $10; those employed for Saturday or the day before a holiday only $5 per day or part thereof plus 50 per cent of proceeds in excess of $7 for the work of the employee; those employed on days other than Saturdays or the day before a holiday, $2.50 per day or part thereof plus 50 per cent of the proceeds in excess of $4 from the work of the employee.

BARBERS, KINGSTON.—An order in Council, dated August 23 and published in *The Ontario Gazette*, August 28, makes binding the terms of a schedule governing the barbering industry in the city of Kingston.

The Schedule is in effect from September 7, 1937 "during pleasure".

The schedule is similar to that noted above for North Bay, with this exception:

Minimum wage for those employed full time on a percentage basis is $15 per week plus 50 per cent of the proceeds in excess of $22 from the work of the employee plus an additional 10 per cent of such proceeds in excess of $30.

BARBERS, STRATFORD.—An order in Council, dated August 23 and published in *The Ontario Gazette*, August 28 makes binding a schedule of wages and hours governing the barbering industry in the city of Stratford.

The schedule is in effect from September 7, 1937 "during pleasure".

The schedule is similar to that summarized above for Cornwall with these exceptions:

Minimum wage rates for full time employees: persons employed full time on a straight salary, $19 per week; those employed full time on a percentage basis, $13 per week plus 50 per cent of proceeds in excess of $19 from the work of the employee and an additional 10 per cent of such proceeds over $30. (The rates for part time employees are the same as for Cornwall.)

BARBERS, NIAGARA FALLS.—An Order in Council dated August 23 and published in *The Ontario Gazette*, August 28, makes binding the terms of a schedule governing the barbering industry in the city of Niagara Falls, the villages of Chippawa and Stamford and adjacent area.

The schedule is in effect from September 7, 1937 "during pleasure".

The schedule is similar to that summarized above for Cornwall, with these exceptions:

Minimum Wages: persons employed full time at straight salary, $25 per week; those employed full time on a percentage basis, $15 per week plus 50 per cent of proceeds in excess of $22 from the work of the employees and an additional 10 per cent of such proceeds in excess of $30; those employed nights and Saturdays $7.50 per week plus 60 per cent of proceeds in excess of $12.50; those employed Saturday or the day before a holiday and on previous evening only, $5 per week plus 60 per cent of proceeds in excess of $7.50; those employed for Saturday or the day before a holiday, $4 for the day or part thereof, plus 60 per cent of proceeds in excess of $6; those employed on days other than Saturday or the day before a holiday $3 per day or part thereof plus 60 per cent of the proceeds in excess of $5.

BARBERS, ST. CATHARINES, PORT DALHOUSIE, MERRITON AND THOROLD.—An Order in Council, dated August 23 and published in *The Ontario Gazette*, August 28, makes binding a schedule of wages and hours governing the barbering industry in the city of St. Catharines and the towns of Port Dalhousie, Merritton and Thorold.

The schedule is in effect from September 7, 1937 "during pleasure".

The terms are the same as for barbers at Niagara Falls as summarized above.

INDUSTRIAL STANDARDS ACT OF SASKATCHEWAN

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Saskatchewan was summarized in the June issue of the Labour Gazette, page 635. It is similar to the Industrial Standards Act of Ontario. The Act provides that the Minister of Municipal Affairs may, upon petition of employers or employees in any industry (except coal mining and agriculture) authorize an industrial standards officer to call a conference of employers and employees in such industry to investigate conditions and negotiate an agreement concerning hours, minimum rates of wages and overtime rates. If, in the opinion of the Minister, a schedule is agreed upon by a proper or sufficient representation of employers and employees, he may approve it and, upon his recommendation, the Lieutenant Governor in Council may declare it to be binding upon all employers and employees in the industry in the designated zone or zones, during pleasure or for the period not exceeding twelve months stipulated in it. The schedule does not come into effect until ten days after the publication in *The Saskatchewan Gazette*. The Act is to be administered by the Minister of Municipal Affairs and authority to enforce it and the regulations made under it is given to the Commissioner of Labour who is to be assisted by one or more industrial standards officers.

Carpenters, Moose Jaw.—An Order in Council approved July 29 and published in *The Saskatchewan Gazette,* August 16, makes binding upon employers and employees the terms of an agreement between Moose Jaw Builders and Contractors and the employed carpenters.

The agreement is in effect from August 30, 1937 to August 30, 1938.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: time and one half; work on Sundays and five specified holidays, double time.

Minimum wage rate for carpenters: 70 cents per hour. Foremen (to be employed when there are five or more carpenters on any job) to receive at least 10 cents per hour extra.

Apprentices: any recognized firm in business for one year employing five journeymen carpenters shall be entitled to one apprentice. Under no consideration shall more than two apprentices be allowed to work on one job unless 20 or more carpenters are employed on the job.

Barbers, Moose Jaw.—An Order in Council, approved July 29 and published in *The Saskatchewan Gazette,* August 16, makes obligatory the terms of an agreement between Moose Jaw employers of the barbering trade and the employed barbers.

The agreement is in effect from September 6, 1937 until September 5, 1938.

Hours: barber shops may be open from 8 a.m. to 6 p.m. except on Saturdays or the day preceding a holiday when they shall close at 9 p.m. No work after noon on Wednesdays from April 1 to August 31 inclusive except on Wednesday of any week in which a holiday occurs. No work on Sundays nor on eight specified holidays.

Wages: persons regularly employed on a percentage basis by a master barber and master barbers who personally perform work at the trade and any person who carries on a business in a one-chair establishment or who operates a barber chair in any shop as a separate unit shall receive $13 for 48 hours, $15.70 for 57 hours or 60 per cent of all money taken in whichever is greater. Persons who are not regularly employed at the trade to be paid 30 cents per hour or 60 per cent of all money taken in, whichever is greater.

No deduction may be made from the above wages for materials supplied, laundry service or operating expenses of any kind.

An apprentice is a person who is receiving instruction in the trade of barbering, whether under articles of apprenticeship or not, and shall be governed by regulations under the Minimum Wage Act of Saskatchewan.

Barbers, Regina.—An Order in Council, approved July 29 and published in *The Saskatchewan Gazette,* August 16, makes obligatory the terms of an agreement between Regina employers of the barbering trade and the employed barbers for the city of Regina.

The agreement is in effect from August 30, 1937 to August 30, 1938.

The agreement is similar to the one summarized above for barbers at Moose Jaw with these exceptions:

The hours during which shops may be kept open are not specified. The Wednesday half holiday is in effect throughout the year.

Wages: persons regularly employed on a percentage basis by a master barber and master barbers who personally perform work at the trade and any person who carries on a business in a one-chair establishment or who operates a barber chair in any shop as a separate unit shall receive $16 per week or 60 per cent of the amount taken in, whichever is greater; those not regularly employed at the trade to be paid $3 per day except for Saturday or the day preceding a holiday for which they will be paid $5.

Electrical Workers, Regina.—An order in Council dated July 29 and published in *The Saskatchewan Gazette* August 16, makes obligatory in the city of Regina the terms of an agreement between the Regina employers of the electrical industry and the employed electrical workers.

The agreement is in effect from September 6, 1937 to September 5, 1938.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime to be paid at regular rate. Work on Sundays and eight specified holidays, time and one half.

Minimum rate of wages: journeymen 80 cents per hour, probationary journeymen (those who have completed their apprenticeship, obtained a licence but have not worked for at least 12 months after securing the licence) 70 cents. Wages for apprentices: first year 30 cents, second year 40 cents, third year 50 cents, all other apprentices 60 cents.

A special minimum wage rate may be established by the Advisory Board for any handicapped person.

Apprentices: not more than one apprentice may be employed for each probationary journeyman or journeyman employed. A year's apprenticeship shall consist of not less than 1,000 hours work done during any consecutive twelve months period.

INDUSTRIAL STANDARDS ACT OF ALBERTA

Schedule of Wages and Hours Recently Approved by Order in Council

THE Industrial Standards Act of Alberta, 1935, is similar to the Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, 1935, page 534, where are also noted the minor differences between the Ontario and Alberta Acts. The Act provides that the Minister of Trade and Industry for Alberta may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in any industry in any zone or zones, to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry and district. If, in the opinion of the Minister, a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation the Lieutenant Governor in Council may declare such schedule to be in force for a period not exceeding twelve months, and thereupon such schedule shall be binding upon every employee and employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after the publication of the Order in Council in *The Alberta Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Previous schedules under this Act have been summarized in the LABOUR GAZETTE, September, 1935, April, July, September, November, and December, 1936, May, June, July and August, 1937.

CREOSOTE WORKERS, CALGARY.—An Order in Council dated August 26 and published in *The Alberta Gazette* August 31 makes binding the terms of a schedule of wages and hours for creosote workers in the city of Calgary.

The schedule is in effect from September 10, 1937, to September 9, 1938.

Hours: regular plant hours, 8 per day, 6 days per week except where certain men are hired on a different basis and definitely advised accordingly. Checkers, foremen, watchmen and others whose duties are of a supervisory nature not to work more than 9 hours per day, 54 per week.

Overtime: time and one-half.

Minimum wage rates: stacking switch ties from cars to yard and loading from yard to cars 50 cents per thousand whether sorting is required or not. The minimum rate for all hourly workers is 40 cents per hour, except watchmen. Although the cars of ties and other material arrive at irregular intervals, an effort will be made to limit the stacking crews to the number necessary for the average amount of work, thus insuring steadier work for regular employees.

The management will deal with a representative plant committee of employees on all matters affecting the plant and employees. No attempt will be made by the management to prevent employees exercising their legal right to bargain collectively, by discrimination in employment or in any other way.

LATHERS, EDMONTON.—An Order in Council, dated August 17 and published in *The Alberta Gazette*, August 31, amends the previous Order in Council for this trade (LABOUR GAZETTE, May, page 579) by adding a clause providing that journeymen working with plaster board, gyprock or any material covered with plaster, such as insulation floor metal lath for pan construction be paid 75 cents per hour.

According to a bulletin entitled "The Non-Ferrous Smelting and Refining Industry in Canada, 1936," published recently by the Dominion Bureau of Statistics, the gross value of all products of the non-ferrous metallurgical industry of Canada totalled $229,737,420 in 1936 as compared with $186,245,658 in 1935, or an increase of 23·3 per cent. Capital employed in 1936 by the combined firms comprising this industry amounted to $143,858,717, while the number of employees engaged in the industry totalled 10,015, and the sum of $14,346,050 was distributed in salaries and wages.

PRICES, RETAIL AND WHOLESALE IN CANADA AUGUST, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

IN retail prices the cost of a weekly family budget of staple foods, fuel and lighting and rent was higher than in the previous month due to an advance in the cost of foods while the Dominion Bureau of Statistics weekly index number of wholesale prices declined week by week throughout the month the downward movement being due mainly to lower prices for grains, milled products, potatoes and non-ferrous metals.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8.80 at the beginning of August as compared with $8.56 for July. Seventeen items in this list cost more than in the previous month while six were lower and six unchanged. The largest increases were recorded in the cost of eggs, butter, potatoes, pork, bacon, bread, flour and rolled oats. Declines were slight the most important being in the cost of beef and mutton. Comparative figures for the cost of this list of foods for certain earlier dates are $8.17 for August, 1936; $7.73 for August, 1935; $6.67 for March, 1933 (the low point in recent years); and $11.63 for August, 1929. Including the cost of fuel and rent with that of foods the total budget cost $17.48 at the beginning of August as compared with $17.24 for July; $16.72 for August, 1936; $16.15 for August, 1935; $15.41 for June, 1933 (the low point in recent years); $21.90 for August, 1929; $20.88 for August, 1922; $26.92 for July, 1920 (the post war peak); and $14.41 for August 1914. No changes were reported in rent while in fuel anthracite coal was slightly higher, there being seasonal increases in several cities.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base 1926 as 100 was lower week by week throughout the month continuing the movement which commenced about the middle of July. For the week ended August 27 the index number was 84.8 as compared with 87.7 for the week ended July 16 which was the highest point recorded since July, 1930. The latest figures available on a monthly basis are for July, 1937 when the index was 87.5 as compared with 76.2 for August, 1936; 71.7 for August, 1935; 63.5 for February, 1933 (the low point in recent years); 98.4 for August, 1929; 97.1 for August, 1922; 164.3 for May, 1920 (the post war peak); and 66.1 for August 1914. The fluctuations in the prices of grain continued to be an important factor in the movement of the general index number the index for the grain sub group having declined for six consecutive weeks from 105.2 the high for the present year to 87.6 for the week ended August 27. Milled products declined during recent weeks in sympathy with the movement in grain prices while potatoes and non-ferrous metals also recorded important decreases. The index of Canadian farm products declined steadily during the month under review from 89.8 for the last week in July to 82.1 for the week ended August 27. In this same comparison and in the grouping according to chief component materials, the vegetable products, textile products, wood and wood products, iron and its products, and the non-ferrous metals products groups were lower while the animal products, the non-metallic minerals products, and the chemicals and allied products groups were slightly higher.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of August of seventy-two staple foodstuffs groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statictics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the Labour Gazette, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in

43S61—7½

the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Beef prices averaged lower in most localities the Dominion average for round steak being down from 24·9 cents per pound in July to 24·1 cents in August and for shoulder roast from 16·2 cents per pound to 15·2 cents. Mutton also was lower the price for leg roast averaging 23·3 cents per pound in August as compared with 24·7 cents in July. Fresh pork and bacon continued the gradual advance in progress since the spring, leg roast of pork averaging 23·7 cents per pound in August, 22·6 cents in July and 20·5 cents in March while

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended August 27, 1937; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 1040)

breakfast bacon averaged 30·7 cents per pound in August, 29·1 cents in July and 28·5 cents in April. Prices of the latter were considerably higher in cities in the western provinces than in most other localities.

The price of fresh eggs averaged more than 5 cents per dozen higher in August at 32·2 cents than in the previous month. Prices in the prairie provinces showed less change in the average than in other provinces. Creamery butter advanced in most localities the Dominion average price being up from 28·9 cents per pound in July to 30·8 cents in August. Higher bread prices were reported from several cities and the Dominion average was fractionally higher at 7·1 cents per pound. Flour again advanced averaging 4·7 cents per pound in August as compared with 4·5 cents in July and 4·1 cents at the beginning of the year. The Dominion average price for potatoes, was $1.54 for ninety pounds as compared with $1.44 in July and $2.17 in August, 1936. Prices of this commodity were considerably higher in cities in Northern Ontario and in the western provinces than in other parts of the Dominion. United States anthracite coal averaged $14.07 per ton as compared with $14.03 in July.

Following are the prices reported for Welsh coal, "cobbles" and "French nut": Halifax $15.50; Charlottetown $12.90; Moncton $15.50; Saint John $13; Quebec $13; Three Rivers $15 and $14; Sherbrooke $14.50 and $15; St. Hyacinthe $14; Montreal $13.75-$14.25; Ottawa $15.75; Kingston $14.50; Belleville $14.75; Peterborough $16; Oshawa $14.50; Toronto $14 and $13.50; St. Catharines $15; Hamilton $14 and $13.50; Brantford $16.25; Galt $16; St. Thomas $16; Sudbury $16.75; Cobalt $18; Timmins $18; Sault Ste. Marie $14; Port Arthur $17.25; Fort William $17.25; Winnipeg, $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and certain of the principal commercial and industrial countries appeared in the July issue of the Labour Gazette.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1930=100, was 111·5 for July, an increase of 0·8 per cent for the month. The combined food groups increased from 101·6 to 102·9, an increase of 1·3 per cent, mainly due to an increase of 3·7 per cent in the cereal group. The combined industrial materials and manufactures groups increased from 115·3 to 116·1 an increase of 0·7 per cent; the iron and steel group and the non-ferrous metal group showed increases of 3·2 per cent and 1·7 per cent respectively but decreases were recorded in the other industrial materials and manufactured goods group notably in cotton which decreased 3·0 per cent and coal which decreased 1·1 per cent.

The *Statist* index number on the base 1867-1877=100 was 105·6 at the end of July, an increase of 1·2 per cent for the month. Increases were recorded in all groups except the textile group which declined due to a sharp break in cotton. The largest increase in any group was one of 3·1 per cent in minerals.

Cost of Living.—The Ministry of Labour's index number on the base July, 1914=100 was 155 at the beginning of August, showing no change from the figure at the beginning of July.

France

Wholesale Prices.—The General Statistical Office index number, on the base 1914=100, was 579 for July as compared with 538 for June, an increase of 7·6 per cent for the month. The combined food group increased 4·7 per cent while the combined industrial materials groups increased 10·5 per cent. While the prices in francs rose the index on the base of gold with 1914 equalling 100, declined from 73 to 66 during the month.

Cost of Living.—The index number of the General Statistical Office, on the base 1914=100 was 606 for the second quarter of 1937 as compared with 581 for the first quarter, an increase of 4·3 per cent. The index for food rose from 604 to 629 or 4·1 per cent during the same period.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913=100, was 106·4 for July an increase of 0·3 per cent for the month.

Cost of Living.—The official index number on the base 1913-14=100 was 126·2 for July an increase of 0·7 per cent for the month. Rent was unchanged but food, heat and light, clothing and sundries all showed slight increases.

India

Wholesale Prices.—The index number of the Labour Office, Government of Bombay, on the base July 1914=100, was 109 for May and 106 in June. These figures showed increases of 16 and 12 per cent respectively over the corresponding month in 1936.

Cost of Living.—The official index number of the working class cost of living at Bombay, has been revised both with regard to the method of weighting and the base which is now the average of prices for the twelve months from July, 1933, to June, 1934, as 100. Under this new method of compilation the index number for June was 105 and that for July was 106.

United States

Wholesale Prices.—The Bureau of Labour Statistics index number on the base 1926=100, was 87·2 for June a decrease of 0·2 per cent for the month. This figure is 1·5 per cent above the year's low of January and 10·1 per cent above the level for June, 1936. Declines were recorded in farm products, hides and leather products, textile products, building materials, chemicals and drugs and miscellaneous products. Foods, fuel and lighting materials, metal and metal products, and house-furnishing goods advanced fractionally. Although the market prices of raw materials and semi-manufactured goods declined during June both groups are still substantially above their levels of a year ago. Finished product prices continued to rise, reaching the highest level since June, 1930.

Dun and Bradstreet's index number (in continuation of Bradstreet's index number) which is based on the sum total of the prices per pound of 96 articles of common use was $11·2734 at July 1, a decrease of 0·6 per cent for the month. Of the thirteen groups eight declined, four increased and one was unchanged. The more important decreases by groups, were as follows: breadstuffs 4·4 per cent, oil and textiles 3·1 per cent each, hides and leather 3·0 per cent, naval stores 1·6 per cent, building material 1·4 per cent. The provisions group rose 2·8 per cent and metals 1·7 per cent. All other changes were less than 1·0 per cent. This index shows an increase of 14·4 per cent over that of July 1, 1936.

Dun's index number based on the cost per capita of a year's supply of commodities was $202·413 at July 1, an increase of 0·4 per cent for the month. The dairy and garden products group increased 3·7 per cent, metal increased 2·4 per cent, meat increased 1·2 per cent. Clothing decreased 1·1 per cent and the miscellaneous group decreased 1·0 per cent. Compared with the same date last year the July 1 index showed an increase of 13·5 per cent.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Quebec Shoe Workers Win Appeal Case for Wages Under Agreement

The LABOUR GAZETTE of August, 1936, carried an account of the decision of Mr. Justice Verret of the Superior Court of the District of St. Francis in an action for wages against the Diva Shoe Company of Richmond, Quebec. The action was brought by the joint committee appointed to enforce the collective labour agreement made binding on the shoe industry under the Collective Labour Agreements Extension Act. The Court decided in favour of the plaintiff and ordered the shoe company to pay the sum of $1,137.84 to the employees of the company as the amount due them, being the difference between the wages paid and the wages calculated at the rate fixed in the agreement. Th Diva Shoe Company appealed this decision, chiefly on four grounds:

1. The agreement to pay 32 cents an hour was not in writing as the Act required and therefore not enforceable;

2. The "association" which signed the agreement had no existence in law;

3. The collective agreement is a form of stipulation for a third party which is prohibited by Article 1029 of the Civil Code of Quebec;

4. The statute on which the agreement is based is unconstitutional because it conflicts with Article 498 of the Criminal Code and with the Combines Investigation Act since a collective agreement is a combination in restraint of trade.

Mr. Justice Letourneau gave the judgment of the Court of King's Bench and dismissed the appeal. He held that the Collective Labour Agreements Extension Act did not conflict with any federal law. In his opinion, an agreement made under this Act is not a combination in rstraint of trade as prohibited by the federal statutes. The latter forbid combinations in restraint of trade which are detrimental to the public interest. Their object is to prohibit the formation of monopolies by producers for the purpose of getting control of the markets at the expense of the consuming public. An agreement to fix wages and working conditions is not necessarily an agreement in restraint of trade and is not detrimental to the public good. Such an agreement may result in higher prices but this may be for the public good if it also results in a just wage to the workers. Thus the purposes of the federal and provincial laws are quite different. There is no conflict between the two and therefore the Collective Labour Agreements Extension Act cannot be considered invalid on this ground.

A stipulation for a third party is permitted by the Civil Code of Quebec only when it is a condition of the contract itself. Mr. Justice Letourneau quoted authorities distinguishing between a labour agreement and a contract containing a stipulation for a third party. The latter implies the freedom of the third party to accept or not to accept the terms of the stipulation. This is not true of a labour agreement, otherwise a collective agreement would be futile. A labour agreement is a contract signed by trade union officers acting on behalf of the workers. It is not, therefore, a stipulation for a third party.

As regards the legal personality of an "association", the Court concluded that although the Professional Syndicates Act of 1924, which declares professional syndicates to be corporations having civil rights, does not use the word "association," but confers the power of making agreements on syndicates, unions and federations of syndicates, the Collective Labour Agreements Extension Act of 1934 includes all "bona fide" labour organizations whether registered as professional syndicates or not and, therefore, the National Catholic Federation of Shoe Workers has the power to sign such an agreement under the Act. Further, the Association of Shoe Manufacturers of Canada, the other party to the agreement, is a legal entity and the agreement is binding on it. It might be noted here that in 1935 after the proceedings against the Diva Shoe Company had been instituted the Collective Labour Agreements Act was amended to provide that the joint committees appointed to enforce agreements should have all the civil rights of a corporation.

The first ground of appeal, that the agreement to pay 32 cents an hour was not in writing, was rejected by Mr. Justice Letourneau because this oral agreement arose out of

objections to the original written contract and the Deputy Minister of Labour was obliged to find a compromise to which a meeting of employers and employees agreed verbally. This was not therefore a sufficient ground for throwing out the agreement.

Gagnon et autres v. Diva Shoe Company, Ltd. et Association des Manufacturiers de Chaussures de Québec et une autre et Procureur Général de Québec, intervenant. Quebec, Court of King's Bench, June 30, 1937.

VOLUME 37] OCTOBER, 1937 [NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THERE was a considerable increase in employment at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 10,336 firms, each with a minimum of 15 employees, representing practically all industries except agriculture, fishing, hunting and highly specialized business operations. These firms employed 1,174,041 persons, or 30,581 more than in the preceding month. The experience of the last sixteen years shows that the average change between August 1 and September 1 has been very slight, gains in a number of these years just about balancing declines in the remainder; the large advance at September 1, 1937, was therefore especially interesting. The employment index number (with the average for the calendar year 1926 as the base equal to 100) stood at 123·2, as compared with 120·0 at August 1, 1937, and with 107·1 at September 1, 1936. At the same date in preceding years of the record the index was as follows: 1935, 102·7; 1934, 98·8; 1933, 88·5; 1932, 86·0; 1931, 107·1; 1930, 116·6; 1929, 126·8; 1928, 119·1; 1927, 111·0; 1926, 106·2; 1925, 97·8; 1924, 94·2; 1923, 101·2; 1922, 94·8, and 1921, 89·8.

Unemployment in Trade Unions.—At the beginning of September, 1937, the unemployment percentage among local trade unions throughout Canada stood at 7·6 in contrast with 8·9 per cent at the beginning of August, 1937, and 10·8 per cent at the beginning of September, 1936. The September percentage was based on the returns received from 1,835 labour organizations, involving a membership of 201,458 persons.

Employment Office Reports.—Reports received by the Department of Labour from offices of the Employment Service of Canada during August, 1937, showed that the volume of business, as indicated by the average daily placements effected, was higher than that of the preceding month, as well as that of the corresponding month a year ago. All groups, except construction and maintenance, and mining shared in the increased placements over those of the preceding month, while farming was the only division to record a decline from August last year. Vacancies in August, 1937, numbered 41,896, applications 59,005 and placements in regular and casual employment 38,659.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.41 at the beginning of September as compared with $17.48 for August, the slight decline being due to the lower cost of foods. Comparative figures for certain earlier dates are $16.84 for September, 1936; $16.16 for September, 1935; $15.41 for June, 1933 (the low point in recent years); and $21.90 for September, 1929. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 85·2 for the week ended October 1, having advanced gradually week by week since September 10 when the index was 84·6, the same as for the preceding week. The slight increase was due mainly to higher prices for grains and milled products. Non-ferrous metals, raw cotton and raw wool were lower. On a monthly basis the index number was 85·6 for August, 1937; 76·4 for September, 1936; 72·4 for September, 1935; 63·5 for February, 1933 (the low point in recent years); and 97·8 for September, 1929.

Business Statistics.—The table on page 1054 gives the most recent statistics available reflecting industrial conditions in Canada. In August the index of the physical volume of business compiled from forty-six factors adjusted where necessary for seasonal changes was 123·4 per cent of the 1926 level, being down somewhat from the levels of June and July. It was, however, about nine per cent higher than in August, 1936. The indexes of mineral production, manufacturing, electric power output and car loadings in the month under review were lower than in the preceding month, while construction, imports and exports were higher. All of the above-mentioned factors were substantially higher in August, 1937, than in August, 1936, with the
